RE: Preliminary Site Environmental Investigation
Appalachian Energy Facility
Boone, North Carolina
Project No. EP-1285

Dear Mr. Ray:

This letter report is intended to describe the field activities and present the results obtained from a preliminary environmental site investigation conducted at the subject site by Enviro-Pro, P.C. (EP). This work was performed in accordance with EP's Proposal No. EP-1285 dated May 30, 2000.

On June 5, 2000, personnel from EP and Subsurface Environmental Investigations, LLC (SEI) mobilized to the subject facility in Boone, North Carolina to conduct soil and groundwater sampling. SEI's track-mounted Geoprobe unit was utilized to collect a total of 4 groundwater and 12 soil samples via direct push technology. Approximate sample locations are indicated on attached Figure 1, Site Plan.

Groundwater depths encountered varied from approximately 3.5 feet below ground surface (bgs) near Kraut Creek to 8 feet bgs near Poplar Grove Road. Soil samples were collected at depths ranging from 1.5 feet bgs near the creek to 10 feet bgs near the road. All soil and groundwater samples were placed in clean, laboratory-supplied containers, labeled, packed on ice in a portable cooler, and transported to Prism Laboratories, Inc. in Charlotte, North Carolina for analysis. All downhole Geoprobe equipment was steam cleaned and disposable sampling gloves were changed between each sampling location to prevent cross-contamination.

15101 Regena Lane • Charlotte, NC 28278 • (704) 583-0075 • FAX (704) 583-2673

A summary of the groundwater test results is presented in Table 1. State groundwater standards for at least two parameters were exceeded in GW-1, GW-2 and GW-3, with the GW-2 sample displaying the highest level of petroleum constituents. Table 2 contains a summary of diesel and gasoline range total petroleum hydrocarbons (TPH) detected in the soil samples collected at the subject site. Petroleum constituents were identified in 10 of the 12 samples obtained, with SS-1, SS-2, SS-5, SS-10 and SS-11 displaying the highest levels.

At the present time, the North Carolina DENR risk classification for this site is unknown. However, it is most likely to be either "low" or "intermediate". While the State may require soil remediation, I do not believe that active groundwater remediation will be reqiured. An initial estimate of the cost of soil remediation (if required) would be approximately $50,000. If natural attenuation monitoring of the groundwater is required, the cost for monitor well installation, sampling, and reporting to DENR for three years would be approximately $15,000 to $20,000. This would include the preparation and submittal of a Corrective Action Plan (CAP).

Enviro-Pro, has appreciated the opportunity to provide our environmental services on your project. Please contact me at (704) 583-0075 if you have any questions concerning the information presented in this report, or when I can be of further service.

Sincerely,
ENVIRO-PRO, P.C.
