Project: Exxon RAS 4-3998

Location: 4701 W. Market

Conversation with: Andy Nunnally

Telephone: (704) 541-8345

Company or Firm: ERM-Southeast

Discussion: Andy Nunnally called & faxed data and figures. They have installed & sampled upgradient MW-9. Benzene (36 ppb) is >2L levels, but they feel that plume is defined. Most recent sample in MW-2 (December) showed benzene at 778 ppb. Based on gw flow direction, drop off in benzene level from MW-2 to MW-9 and proximity of MW-9 to Manley St., this appears to be sufficient delineation. Cleanup system is already installed. Property owner across Manley St. would not be likely to allow access. MW-1A was also sampled & analysis showed all 602s were BDL. Told him that this looked like sufficient upgradient definition, but that this wasn't a guarantee - still subject to secondary review by W-S.
