project: Luck's Plant
talked to: Jerry Cole of Spatco

Luck's 9071 back ground sample = 180 PPM TO&G
Told him they could clean-up to 190 PPM TO&G or run Burlington Reach's test for heavier oils that Connie approved.
Jerry said quality control on resample would be difficult because pit was back filled & paved. Cole said it would be next to impossible to duplicate the orginal sampling locations for the 2 high samples.
Said I'd discuss w/ SAK, would he (Cole) call back in 20 mins. Yes
C

JLS

P.S. Cole wants to do SSE
I said SEE is hard to apply to TO&G

P.P.S.
Cole called back: Told excavate or run indefinitely: will call Lucks & call back
