RE: Van Waters NONCD0000003 page 1 of 2

TELEPHONE LOG:

I explained that I didn't have a disagreement regarding the last report but as the information is compiled- I find it difficult to delineate b/c we don't have a site list of COCs - we need characterization before - I recommended compiling all data into a summary in a work plan so we could build a CSM that's applicable. A cursory review suggests some soil work was repeated and I don't understand why the former consultant abandoned certain wells. The risk to SG-6 suggest the potential for VI - residential - house 400' away. There are other chemical spills in this area - we should focus on only Van Waters. I recommended this approach - scrap a RI request for work plan - completing the checklist of item 1 - compiling all the data on relevant maps and tables - I know this is difficult but our understanding of the site would improve - I would rather they pause and redirect their resources to this than do another annual GW report. I think UNC should leverage the wealth of data already

RE:

TELEPHONE LOG:

created and direct their current resources to a adequate csm before any more work continues. I asked their opinion and they seemed to agree. I said to talk to Jack and see if he liked this approach and if not - I would send a more targeted request. They said they would let me know - I explained I could provide initial oversight and later determine Eligibility for REC program - for additional cost saving. - Only SVOCs data from 1983 - maybe composite - G+M used and later discounted this as a source area - no metal data -

They agreed to discuss w/ Jack of univar and follow up w/ me by next thursday GW

- need inventory of monitor wells
- need database/table of all environmental data (elevatation not necessary)
- need to estimate locations on a map
- include appropriate qualifiers for the data.

⇒ would be in response to a Phase I RI workplan request.
