TO: Note: RE: meeting w/ Bill Barriger (Alexander Co.)	FROM: Bobby Lutfy	DATE 5-9-89 TIME 1:00 P.M.

SUBJECT Additional G.W. monitoring wells needed at Alexander Co. landfill

SUMMARY OF COMMUNICATION

Discussed basic information relating to establishing a ground-water monitoring system. Presently Alexander has 2 wells which are not built to the specifications of the guidance document. Well #2 is dry.

Alexander Co. plans to acquire additional land as a buffer zone, to accomodate a better G.W. monitoring system, for borrow, and perhaps some demolition landfilling.

In the area of existing well #1, trash has been landfilled to the permited boundary. Additional land would have to be acquired to establish an adequate well in this area.

Mike Babuin told Mr. Barriger that extensions to meet our office's June 30, 1989 deadline for establishing a G.W. monitoring system would not normally be granted.

If additional land can be acquired quickly, S.W. Branch could amend the permit to include the additional land for non-landfilling activity.

Mr. Barriger will discuss the situation with the Co. commissioners and get back with us soon.

CONCLUSIONS, ACTION TAKEN OR REQUIRED

Our office is now awaiting a response from the Alexander Co. commissioners. Mr. Barriger will get in touch with our office as soon as they make a decision.
