Request for Denial of Coble Sandrock Expansion

Ming-Tai Chao, P.E.
Environmental Engineer II
Permitting Branch, Solid Waste Section
Division of Waste Management
1646 Mail Service Center
Raleigh, NC 27699-1646

RECEIVED
AUG - 5 2008
SOLID WASTE SECTION

I. We request denial or postponement of approval for the Coble Sandrock Expansion permit based on NCAC 15A 13b 0.0203(e) item number (4).

We ask that the permit for expansion not be granted at this time. In order to grant the community time to request assistance with determining the extent of the health, environmental, and nuisance impacts that have been presented with the placement of a private landfill in a residential community and what adverse health problems will be created by the proposed expansion.

Please consider the following statements based on the specifications set forth by Article 9 Chapter 130A of the General Statues.

Item Number (4) The Coble Sandrock landfill is located a residential community and it creates a public nuisance and is currently cause for public health concerns at its current size of just under 40 acres. The expansion to 154.2 acres is substantial and beyond what should be considered in this location residential community. The vast size of this expansion ignores the North Carolina General Statue requirement in that in the new expanded state, the impact on the community will deny us our rights are outlined in 130A of the General Statues. The State must conduct further impact studies to protect the public health and safety of the people in this community. Alamance County is not in need of this expansion, the County already has an approved Construction Debris landfill that has far more safe and efficient disposal methods.

§ 130A-19. Abatement of public health nuisance.

Based on many neighboring family concerns we submit the need for a public health and environmental impact study and a chance for the community to investigate all options to evaluate the health and environmental related concerns associated with the Coble Sandrock Landfill expansion to 154.2 acres from the 39.2 acres. At the current size, we as a community believe that many health and environmental problems are present and must be evaluated before the expansion is considered. The substantial expansion of this facility using an unlined construction system is of great concern and we the people feel that we have the right to request the denial or postponement of this expansion to protect our families until additional studies can be conducted.

1. At the small size of 39.2 acres the environmental and public health impact has been overlooked, especially if one considers that fact that this community has no alternative water source. Water reports show that heavy metals in the test wells above State limits have been recorded. We want to report that the water in our wells seasonally becomes discolored, has bad odors, and bad taste. We must insist that an environmental study of existing wells be performed before the expansion is approved. There is no availability of alternative water supplies and based on *258.51 Ground-water monitoring systems* this should have been and must be addressed in this residential community before the expansion can be approved. Homes bordering the landfill have noted and complained of discoloration and odors of the potable water from their wells. Even water reports filed for the landfill have recorded remarks that the water is often discolored or noted to have **odors.** This expansion must not be approved until our well water has been tested and we know that we are not currently in danger and until we know as a community that we will be protected from future contamination or promise of an alternative water source.

2. Noise related stress has induced traumatic illness on neighbors and the community over the years at the existing size. Health considerations and environmental studies are needed to determine the degree of health problems the noise from this site has put on the people at this current size and the impact this substantial expansion will have. At times it is unbearable in the current operation size. This is a public nuisance that causes health problems. The people have no peace in their own homes, their mornings and nights after work are filled with distress as the machinery vibrates their homes.

3. Odors from the landfill are thought to be the source of many illnesses and have caused families to relocate and move from their homes. Odors in general are indications of improper landfill operation. The EPA and your website inform the public that a properly maintained landfill will not have an odor problem. The strong odors from this landfill overwhelm this community at this small size, the expansion should not be considered until the source of the odors have been located and landfill operation procedures are changed to prevent the odors. The odor is denied by the Owner's and Workers, however, it is documented by the water sampling company as they write that even well samples are discolored and have odors. Many residents have respiratory problems and related illness. Homes bordering the landfill seasonally have discolored water from their wells, especially in times when the weather shifts from heavy rains to drought conditions. The expansion should not be approved until this health and environmental impact has been evaluated. We have already started to contact other State agencies to request help in this matter, we need time to make sure that our health and environment is safe before the expansion is approved.

4. Dust and debris from the landfill is damaging the air quality in the community. Many residents have respiratory problems and related illness from fiberglass and many other airborne particles resulting from the construction debris. Considerations and studies are needed to determine the effect on air quality to the families adjacent to and across the road from the landfill before an expansion is considered. Construction debris is full of air borne contaminates and the homes that border this landfill are covered with the dust from the debris.

5. At the public hearing, we were told that traffic studies were not required or important for this expansion permit hearing; however, we would like to point out that the majority of the roads to the Foster Store Road location are accessed by small county roads. The air quality, noise pollution and stress of the dangerous trucks need to be considered before this expansion is approved. The main roads correspond to roads used for main entry to EM Holt Elementary and Southern High School. A traffic and traffic impact study is needed to protect the public. With the amount of trucks in this area the public safety is not protected.

6. This community has a large number of cancer cases. A public health study needs to be conducted before the landfill expansion is approved.

II. **We request denial or postponement of approval for the Coble Sandrock Expansion permit based on NCAC 15A 13b 0.0203(e) item number (2, 3). Based on current violation within 0544 MONITORING PLANS AND REQUIREMENTS FOR C&DLF FACILITIES**

1. Best possible landfill operations are not currently in place in the small size in order to protect the public. During the public hearing, we were told that Coble Sandrock does not operate under the same guidelines as the Alamance County ? Construction Debris Landfill. We feel that Coble Landfill should be bound by the same rules and regulations that are in place to reduce solid waste and protect the health and environment in our community as required in the Alamance County location. The permit should be denied until regulations can be in place to promise us the same considerations that the communities in adjacent to Alamance County's Landfill have been given.
2. The expansion size should be reviewed. We feel that the expansion is too large for this small community that already has a construction landfill operated by Alamance County. Existing paper and reports show that currently Coble Landfill has not properly maintained test wells to ensure properly water testing. Test sample logs report problems with wells and inconsistent samples. Test wells have been described as damaged, covered with debris, and even covered with a tire. At the new expanded size, we feel that Coble will not be able to follow proper

procedures to ensure that our water and environment is protected since they have not followed procedure in the small 39 acre landfill. Please review the hand written water reports and notice all the notes about improper maintained test sites.

§ 258.51 Ground-water monitoring systems.
(2) The monitoring wells, piezometers, and other measurement, sampling, and analytical devices must be operated and maintained so that they perform to design specifications throughout the life of the monitoring program.

(vii) The cost and availability of alternative water supplies.
(iii) Accuracy of monitoring or modeling techniques, including any seasonal, meteorological, or other environmental variability's that may affect the accuracy; and

0544 MONITORING PLANS AND REQUIREMENTS FOR C&DLF FACILITIES

(2) Monitoring wells must be designed and constructed in accordance with the applicable North Carolina Well Construction Standards as codified in 15A NCAC 02C.

(A) Owners and operators must obtain approval from the Division for the design, installation, development, and decommission of any monitoring well or piezometer. Documentation must be placed in the operating record and provided to the Division.

(B) The monitoring wells and piezometers must be operated, maintained, and accessible so that they perform to design specifications throughout the life of the monitoring program.

3. Papers and correspondence concerning the Coble property shows area that has been declared as "wetland". Over the years that Coble has operated this small landfill, we have watched this wetland and the animals that once live there disappear and the stream and wet areas dry up. The expansion of this landfill will destroy the wetland area that once supported box turtles and cranes. We feel that the size of the expansion is excessive and does not consider the environmental impact as described in 40 CFR 232.2(r).

    a) Best management practices (BMPs) means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States
    b) Impacts on fish, wildlife, and other aquatic resources and their habitat from
    c) To the extent required under section 404 of the Clean Water Act or applicable State wetlands laws, steps have been taken to attempt to achieve no net loss of wetlands (as defined by acreage and function) by first avoiding impacts to wetlands to the maximum extent practicable as required by paragraph (a)(1) of this section, then minimizing unavoidable impacts to the maximum extent practicable, and finally offsetting remaining unavoidable wetland impacts through all appropriate and practicable compensatory mitigation actions (e.g., restoration of existing degraded wetlands or creation of man-made wetlands); and (5) Sufficient information is available to make a reasonable determination with respect to these demonstrations.

Request for Denial of Coble Sandrock Expansion

We, the community, ask for denial or postponement of the permits related to the expansion of the Coble Landfill. We need environment and health impact studies to protect our home and our families are promised by Statue 130A. We currently have problems that need to be addressed before we could consider this expansion. We also feel that the expansion is excessive to change for 39 to 154 acres is beyond what this community needs or can support.

Request for Denial of Coble Sandrock Expansion

~~[illegible] nity, ask for den[illegible] [illegible]onement of the permits related to the expansion of the Coble Landfill. We need environment and health impact studies to protect our home and our families as promised by Statue 130A. We currently have problems that need to be addressed before you can [illegible] this expansion. We also feel that the expansion is excessive to change from [illegible] to [illegible] acres is beyond what this community needs or can support.~~
