Dear Erwin Lane,

I received your letter dated June 25, 2007 concerning our analytical test method for monitoring Weyerhaeuser's Landfill Permit #25-02 groundwater quality. A copy of this letter was forwarded to Mr. Steve Jones with Environment 1 in Greenville, NC who collects and analyzes these samples for us. Mr. Jones and I talked this morning and he informed me that his laboratory would make the required change from EPA Method #106 to the newer EPA Method #8269C. I have also enclosed a copy of you letter.

I apologize for in inconvenience that his may have caused your office. Should you have any questions or comments concerning this communication, please feel free to contact me.

Sincerely,
David F. Gardner

Re: Water Quality Monitoring Adjustment
Weyerhauser Landfill, Craven County, Permit #25-02

Dear Mr. Gardner,

The Solid Waste Section (Section) has determined an adjustment to the Weyerhauser Landfill groundwater monitoring program is necessary. The Section established the Solid Waste Section Limits (SWSLs) on October 27, 2006 which required laboratories to report constituent concentrations at lower levels in order to further protect public health and the environment. Analytical laboratory data the Section receives for review should utilize EPA method 8260C to analyze organic compounds. Our records indicate that the Weyerhauser Landfill monitoring system is currently using EPA Method 601 to analyze organic compounds. In an effort to maintain consistency between the data compared to the SWSLs, Weyerhauser should begin using method 8260C to analyze organic compounds.

Please contact me at (919) 508-8520 or by e-mail at ervin.lane@ncmail.net if you have any questions or concerns regarding this letter. Thank you in advance for your anticipated cooperation in this manner.

Sincerely,

Ervin Lane
