SOLID WASTE SECTION
December 21, 2010

Mr. Kenneth Hardin, Owner
AAA Hauling of NC, Inc.
1171 South Eastern Boulevard
Fayetteville, North Carolina 27343

Subject: Permit Modification Request – Response
AAA Hauling of NC, Inc. – Permit No. 2613
Cumberland County, DIN 12553

Dear Mr. Hardin:

On December 17, 2010, the Division received your email entitled;

*Request for Changes*. Prepared by AAA Hauling of NC. December 2010. DIN 12552.

The changes you suggest in your email are considered to be a permit modification. You will need to send me an application which includes;

1. A signed cover letter expressing your desire to, and your explanations for modification of the permit. Please include your permit number on submitted documents.
2. A revised operation plan.
3. A revised site plan/map.
4. Engineering drawings of the requested modifications and/or additions. All drawings should be stamped for approval by a North Carolina licensed Professional Engineer (PE).

Note: Be aware that if you propose an increase in your permitted volume you will be required to revise the Facility's Financial Assurance mechanism.

The application should include one (1) complete printed copy and one (1) complete electronic copy, in pdf format. Once the application is received you will be invoiced for the appropriate permitting fee, in this case $500.00.

With regards to the four (4) items in your email;

Item 1. – Addition of a picking station, the Division will require engineering drawings, as described above, and the addition of the picking line in a revised site plan. Remember the collection, recovery and treatment of leachate are of utmost importance, regarding the engineering design.

Item 2. – Stockpiling concrete, you must submit a revised operations plan including a complete procedure for the stocking of concrete. Within the revised procedures there should be a section regarding the handling of source separated concrete (not containing waste material, painted concrete or exposed re-bar) and a section regarding concrete with mixed waste. The section regarding concrete with mixed waste will require the removal of waste material from the incoming concrete, the removal and proper disposal of painted concrete, and the removal of exposed re-bar

from the concrete (these procedures must take place prior to stockpiling). The Division will also require a revised site plan showing the proposed storage area, with marked/defined limits.

Item 2. – Stockpiling yard debris, the Division has no definition for yard debris. I recommend you see the definitions contained in the North Carolina Administrative Code, 15A NCAC 13B .0101. I suspect you are requesting permission to store Land Clearing Debris (as defined by 15A NCAC 13B .0101(23)) for Processing (as defined by 15A NCAC 13B .0101(49)) for mulch. In addition, I suspect you may wish to store and process "clean wood", which excludes painted, treated and dimensional lumber.

First, you must give more detail of what you are proposing to accomplish. You will have to submit a revised operations plan, which includes a complete description of the material and procedures for the stocking and processing of the material. Within the revised procedures there should be a section regarding the handling of source separated Land Clearing Debris and "clean wood", and a section regarding Land Clearing Debris and wood with mixed waste and/or painted, treated and dimensional lumber. The section regarding Land Clearing Debris and wood with mixed waste and/or painted, treated and dimensional lumber will require the removal of waste material from the Land Clearing Debris, and the removal and proper disposal of wood that is considered not clean (these procedures must take place prior to stockpiling). The Division will also require a revised site plan showing the proposed storage area, with marked/defined limits.

Note: Yard trash includes solid waste resulting from landscaping and yard maintenance such as brush, grass, tree limbs, and similar vegetative material. Yard trash must be composted prior to distribution to the public; therefore yard trash must be separated for the Land Clearing Debris.

Item 3. – Leaving C&D waste on your tipping pad overnight, the Division will not approve the storage of waste on the tipping pad over night and should not be included in your application.

Item 4. – Removing the current leachate tank, that is associated with the existing pad, the Division will require an engineering description of the current failure (causes), and a description with drawing(s) detailing how the tank will be closed and sealed. The Division will require you to detail in your Operations Plan how you will deal with the collection, recovery, and treatment of leachate on the tipping pad, without a leachate collection tank.

Should you have any questions regarding this matter you may contact me at (828) 296-4704 or at larry.frost@ncdenr.gov.

Sincerely,

Larry Frost
Environmental Engineer
