Re: Ground Water Contamination
Alleghany County Landfill - Permit #03-02

Dear Mr. Poindexter:

Please find enclosed information requested as per your letter of January 14, 1994. As you will see the letter from Bobby Lutfy of May 19, 1992 requested the same material which was compiled in the county in 1992. The following analysis of sampling was conducted per EPA method 8240/8260. You will also note that a copy of each sampling was forwarded to your agency as per directions.

The permanent boundaries and fill area are within the landfill area shaded in yellow and is in conformity with NCDEHNR requirements. There are no surface water intakes in Alleghany County nor has any sampling occurred on the adjacent stream either upstream or downstream.

Please accept my apology for not sending this information to last year but my understanding was that the information was only to be gathered in '92 along with the additional sampling.

If I can be of further help, please notify me.

Respectfully,

Daniel F. McMillan
County Manager
