Subject: **Report of Semi-Annual Water Quality Monitoring**
Series 2 – April 2000
Swepsonville Landfill
Graham, Alamance County, North Carolina
LAW Project 30440-9-0124

Dear Mr. Rose:

On behalf of Alamance County, Law Engineering and Environmental Services, Inc. (LAW) is pleased to present this Report of Semi-Annual Water Quality Monitoring for the above referenced site. This report summarizes the field activities, analytical results, and statistical analysis from the semi-annual sampling event performed in April 2000.

The surface water and groundwater samples were collected in general accordance with the North Carolina Department of Natural Resources (NCDENR) North Carolina Administrative Code (NCAC), Title 15A, Subchapter 13B (15A NCAC 13B), Sections .0601, and .1630 through .1637.

Sincerely,

LAW ENGINEERING AND ENVIRONMENTAL SERVICES, INC.

1.0 PROJECT BACKGROUND

Law Engineering and Environmental Services, Inc. (LAW) was contracted by Alamance County to conduct water quality monitoring at the Swepsonville Landfill. The Swepsonville Landfill is located in Graham, North Carolina (Figure 1).

Prior to LAW's April 2000 and October 1999 sampling event, BPA Environmental & Engineering, Inc. (BPA) conducted semi-annual water quality monitoring events for the existing eleven monitoring wells and collected two surface water samples (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7A, MW-7B, MW-8A, MW-8B, MW-9, SW-1 and SW-2) from October 1995 until March 1999. Groundwater samples from the previous monitoring events were analyzed for Appendix I constituents, which included volatile organic compounds (VOCs) and metals including mercury.

2.0 FIELD ACTIVITIES

Between April 12 and April 17, 2000, LAW conducted the first semi-annual sampling event for 2000 at the Swepsonville Landfill. The field activities were performed in general accordance with the requirements of the North Carolina Department of Natural Resources (NCDENR), North Carolina Administrative Code (NCAC), Title 15A, Subchapter 13B (15A NCAC 13B), Sections .0601, and .1630 through .1637. A total of eleven monitoring wells, and two surface water locations were sampled as part of this monitoring event (Figure 2).

Prior to sampling, the depth-to-groundwater was measured in the eleven monitoring wells using an electric water level indicator. The water level indicator was decontaminated between uses according to the following procedure:

- washed with potable water and phosphate-free detergent solution;
- rinsed with potable water; and
- rinsed with distilled water.

The depth-to-groundwater measurements were not converted to groundwater elevations because survey data indicated that only the top of the steel outer protective casing was surveyed and depth-to-water measurements were previously referenced to the top of the PVC riser casing.

The dissolved oxygen (DO), temperature, pH, and specific conductivity of the groundwater and surface water samples were measured in the field using a YSI combination meter. The pH of the groundwater was also measured in the field using a Cole Parmer pH meter. These measurements are presented in Table 1.

The monitoring wells were purged by bailing an equivalent of five casing volumes of water from the wells or to dryness using a one-liter capacity disposable Teflon™ bailer. The water samples were collected in laboratory-decontaminated bottles. The sample containers were labeled with identifying numbers and information, preserved on ice, and shipped to Prism Laboratories, Inc., a North Carolina licensed laboratory, located in Charlotte, North Carolina for analysis.

The groundwater samples from the monitoring wells and surface water samples were analyzed for Appendix I constituents which included volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (USEPA) Method 8260B and metals using USEPA Method

6010. Mercury was analyzed using USEPA Method 245.1. Laboratory reports and chain-of-custody documentation are included in the Appendix.

3.0 ANALYTICAL RESULTS

3.1. Groundwater Analytical Results

The groundwater analytical results were compared to the North Carolina groundwater quality standards established in NCDENR Title15A NCAC Subchapter 2L Section .0202, Groundwater Quality Standards (2L Groundwater Quality Standards). The detected groundwater analytical results are summarized in Table 2.

Seven chlorinated VOCs were detected in the groundwater samples. Of these VOCs, five were detected above their respective 2L Groundwater Quality Standards. As shown on Table 1, cis-1,2-dichloroethene (cis- 1,2-DCE) was detected in groundwater samples from monitoring well MW-4 at a concentration of 390 µg/l, which exceeds the 2L Groundwater Quality Standard of 70 µg/l. 1,1-DCE was detected in the MW-2 groundwater sample at a concentration of 9 µg/l, exceeding the 2L Groundwater Quality Standard of 7 µg/l. Tetrachloroethene (a.k.a. perchloroethylene or PCE) was detected in groundwater samples collected from monitoring wells MW-2 (15 µg/l), and MW-4 (61µg/l) at concentrations which exceed the 2L Groundwater Quality Standard of 0.7 µg/l. Trichloroethene (TCE) was also detected in groundwater samples collected from monitoring wells MW-2 (17 µg/l) and MW-4 (51 µg/l) at concentrations exceeding the 2L Groundwater Quality Standard of 2.8 µg/l. Vinyl chloride was detected in the groundwater sample from MW-4 (35 µg/l) at a concentration which exceeds the 2L Groundwater Quality Standard of 0.015 µg/l. Other VOCs were detected in wells MW-2 and MW-4 at concentrations below their respective 2L Groundwater Quality Standards. No VOCs were detected in wells MW-1, MW-3, MW-5, MW-6, MW-7A and B, MW-8A and B, or MW-9.

Seven metals were detected in groundwater samples collected at the site. Of those metals, only cadmium was detected in all of the eleven monitoring wells sampled; the cadmium concentration of 0.006 mg/l measured in the groundwater sample from well MW-2 slightly exceeded the 2L Groundwater Quality Standard for cadmium of 0.005 mg/l. Lead was detected in one of the eleven monitoring wells sampled; the lead concentration of 0.016 mg/l measured in the groundwater sample from well MW-5 slightly exceeded the 2L Groundwater Quality Standard for lead of 0.015 mg/l.

3.2. Surface Water Analytical Results

The surface water analytical results were compared to the North Carolina surface water quality standards established in NCDENR Title15A NCAC Subchapter 2B Section .0202, Surface Water Quality Standards (2B Surface Water Quality Standards). The detected surface water analytical results are also summarized in Table 2. No VOCs were detected in the surface water samples; however, zinc was detected in SW-2 (0.061 mg/l). Although there is no established concentration for zinc under 2B Surface Water Quality Standards for Human Health, the detected concentration of zinc in surface water slightly exceeds the 2B Surface Water Quality Standard for Freshwater Aquatic Life of 0.05 mg/l.

4.0 CONCLUSIONS

Based on the analytical data described above, the following conclusions are presented:

- Five VOCs (cis-1,2-DCE, 1,1-DCE, PCE, TCE, and VC) were detected at concentrations which exceed their respective 2L Groundwater Quality Standards. 1,1-Dicholorethane and Cholorethane were also detected in one groundwater sample; however, concentrations were below their respective 2L Groundwater Quality Standards of 700 µg/l and 2800 µg/l. Chloroethane has not been detected previously. Other detected VOC concentrations appear to have decreased since the October 1999 sampling event, with the exception of VC, which has increased.

- Cadmium was detected in several monitoring wells, and one concentration was detected in excess of the 2L Groundwater Quality Standard. The concentrations of cadmium in the April 2000 sampling event have increased in the majority of the wells in which cadmium was detected in the October 1999 sampling event; and

- With the exception of zinc detected in one surface water sample, Appendix I VOCs and Appendix I total metals were not detected in the surface water samples.

The next semi-annual water quality monitoring event is scheduled for October 2000.

FINAL REPORT COPY

LAWGIBB GROUP

February 28, 2000

Mr. Larry Rose
North Carolina Department of Natural Resources
Solid Waste Section
P.O. Box 2687
Raleigh, North Carolina 27611

Subject: **Report of Semi-Annual Water Quality Monitoring**
Series 1 – October 1999
Swepsonville Landfill
Graham, Alamance County, North Carolina
LAW Project 30440-9-0124

Dear Mr. Rose:

On behalf of Alamance County, Law Engineering and Environmental Services, Inc. (LAW) is pleased to present this Report of Semi-Annual Water Quality Monitoring for the above referenced site. This report summarizes the field activities, analytical results, and statistical analysis from the semi-annual sampling event performed in October 1999.

The surface water and groundwater samples were collected in general accordance with the North Carolina Department of Natural Resources (NCDENR) North Carolina Administrative Code (NCAC), Title 15A, Subchapter 13B (15A NCAC 13B), Sections .0601, and .1630 through .1637.

Sincerely,

LAW ENGINEERING AND ENVIRONMENTAL SERVICES, INC.

Carin Lee Kromm, G.I.T
Project Geologist

Laboratory Data and Chain-of-Custody Documentation

1.0 PROJECT BACKGROUND

Law Engineering and Environmental Services, Inc. (LAW) was contracted by Alamance County to conduct water quality monitoring at the Swepsonville Landfill. The Swepsonville Landfill is located in Graham, North Carolina (Figure 1).

Prior to LAW's October 1999 sampling event, BPA Environmental & Engineering, Inc. (BPA) conducted semi-annual water quality monitoring events for the existing eleven monitoring wells and collected two surface water samples (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7A, MW-7B, MW-8A, MW-8B, MW-9, SW-1 and SW-2) from October 1995 until March 1999. Groundwater samples from the previous monitoring events were analyzed for Appendix I constituents, which included volatile organic compounds (VOCs) and metals including mercury.

2.0 FIELD ACTIVITIES

Between October 13 and October 18, 1999, LAW conducted the second semi-annual sampling event for 1999 at the Swepsonville Landfill. The field activities were performed in general accordance with the requirements of the North Carolina Department of Natural Recourses (NCDENR) Title 15A, Subchapter 13B (15A NCAC 13B), Sections .0601, and .1630 through .1637. A total of eleven monitoring wells, and two surface water locations were sampled as part of this monitoring event (Figure 2).

Prior to sampling, the depth-to-groundwater was measured in the eleven monitoring using an electric water level indicator. The water level indicator was decontaminated between uses according to the following procedure:

- washed with potable water and phosphate-free detergent solution;
- rinsed with potable water; and
- rinsed with distilled water.

The depth-to-groundwater measurements were not converted to groundwater elevations because survey data indicated that only the top of the steel outer protective casing was surveyed and depth-to-water measurements were referenced to the top of the PVC riser casing.

The dissolved oxygen (DO), temperature, pH, and specific conductivity of the groundwater and surface water samples were measured in the field using a YSI combination meter. The pH of the groundwater was also measured in the field using a Cole Parmer pH meter. These measurements are presented in Table 1.

The monitoring wells were purged by bailing an equivalent of five casing volumes of water from the wells or to dryness using a one-liter capacity disposable Teflon™ bailer. The water samples were collected in laboratory-decontaminated bottles. The sample containers were labeled with identifying numbers and information, preserved on ice, and shipped to Prism Laboratories, Inc., a North Carolina licensed laboratory, located in Charlotte, North Carolina for analysis.

The groundwater samples from the monitoring wells and surface water samples were analyzed for Appendix I constituents which included volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (USEPA) Method 8260B and metals using USEPA Method

6010. Mercury was analyzed using USEPA Method 245.1 for analysis. Laboratory reports and chain-of-custody documentation are included in the Appendix.

3.0 ANALYTICAL RESULTS

3.1. Groundwater Analytical Results

The groundwater analytical results were compared to the North Carolina groundwater quality standards established in NCDENR Title15A NCAC Subchapter 2L Section .0202, Groundwater Quality Standards (2L Groundwater Quality Standards). The detected groundwater analytical results are summarized in Table 2.

Nine chlorinated VOCs were detected in the groundwater samples. Of these VOCs, six were detected above their respective 2L Groundwater Quality Standards. As shown on Table 1, cis-1,2-DCE was detected in groundwater samples from monitoring well MW-4 at a concentration of 410 µg/l, which exceeds the 2L Groundwater Quality Standard of 70 µg/l. 1,1-Dichlorethene (1,1-DCE) was detected in the MW-2 groundwater samples at a concentration of 23 µg/l, exceeding the 2L Groundwater Quality Standard of 7 µg/l. 1,2-Dichloropropane (1,2-DCP) was detected in the groundwater sample from monitoring well MW- 2 at a concentration of 8 µg/l, which exceeds the 2L Groundwater Quality Standard of 0.56 µg/l. Tetrachloroethene (a.k.a perchloroethylene or PCE) was detected in groundwater samples collected from monitoring wells MW-1 (9 µg/l), MW-2 (38 µg/l), and MW-4 (68 µg/l) at concentrations which exceed the 2L Groundwater Quality Standard of 0.7 ug/l. Trichloroethene (TCE) was also detected in groundwater samples collected from monitoring wells MW-2 (49 µg/l) and MW-4 (57 µg/l) at concentrations exceeding the 2L Groundwater Quality Standard of 2.8 µg/l. Vinyl chloride was detected in the groundwater sample from MW-4 (16 µg/l) at a concentration which exceeds the 2L Groundwater Quality Standard of 0.015 µg/l. 1,4-Dichlorobenzene (1,4-DCB) was also detected in the groundwater sample from MW-4 at a concentration of 7 µg/l; however, a 2L Groundwater Quality Standard has not been established for this compound. Other VOCs were detected in wells MW-2 and MW-4 at concentrations below their respective 2L Groundwater Quality Standards. No VOCs were detected in wells MW-3, MW-5, MW-6, MW-7A and B, MW-8A and B, or MW-9.

Ten metals were detected in groundwater samples collected at the site. Of those metals, only cadmium was detected in seven of the eleven monitoring wells sampled; the cadmium concentration of 0.006 mg/l measured in the groundwater sample from well MW-2 slightly exceeded the 2L Groundwater Quality Standard for cadmium of 0.005 mg/l.

3.2. Surface Water Analytical Results

The surface water analytical results were compared to the North Carolina surface water quality standards established in NCDENR Title15A NCAC Subchapter 2B Section .0202, Surface Water Quality Standards (2B Surface Water Quality Standards). The detected surface water analytical results are also summarized in Table 2. No VOCs or metals were detected in the surface water samples.

4.0 CONCLUSIONS

Based on the analytical data described above, the following conclusions are presented:

- Six VOCs (cis-1,2-DCE, 1,4 DCB, 1.1 DCE, 1,2-DCP, PCE, TCE, and VC) were detected at concentrations which exceed their respective 2L Groundwater Quality Standards. 1,4-DCB was also detected in one groundwater sample; however, a 2L Groundwater Quality Standard has not been established for this compound. 1,4-DCB, 1,2-DCP, and VC have not been detected previously. Other detected concentrations appear to have increased since the March 1999 sampling event.

- Cadmium was detected in several monitoring wells, and one concentration was detected in excess of the 2L Groundwater Quality Standard. The concentrations of cadmium in the October 1999 sampling event have decreased in the majority of the wells in which cadmium was detected in the March 1999 sampling event; and

- Appendix I VOCs or Appendix I total metals were not detected in the surface water samples.

The next semi-annual water quality monitoring event is scheduled for April 2000.

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-1

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy/Wes Scarlett

Purge Date October 13, 1998

Purge Time 3:19 pm to 3:28 pm

Sample Date October 13, 1998

Sample Time 3:30 pm

Weather Sunny, 70-75°F

Water Level and Well Data

1)	Depth to water from measuring point	24.47 ft.
2)	Depth to well bottom from measuring point	33.75 ft.
3)	Height of water column (h)	9.28 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	1.51 gal.
4)	Volume of water removed prior to sampling	4.5 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	63.0°F
2)	Specific Conductance	88.6 μmhos
3)	pH	5.4
4)	Physical Appearance and Odor	Cloudy, tan, silty, no odor, rocks and grout bailed out of well

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-2

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy/Wes Scarlett

Purge Date October 13, 1998

Purge Time 1:59 pm to 2:00 pm

Sample Date October 13, 1998

Sample Time 2:20 pm

Weather Partly cloudy, 70-75°F

Water Level and Well Data

1)	Depth to water from measuring point	26.95 ft.
2)	Depth to well bottom from measuring point	29.30 ft.
3)	Height of water column (h)	2.35 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	0.38 gal.
4)	Volume of water removed prior to sampling	0.40 gal.
5)	Was well purged DRY? (circle one)	(YES) NO

Field Analysis

1)	Temperature	60.6°F
2)	Specific Conductance	159.6 μmhos
3)	pH	6.1
4)	Physical Appearance and Odor	Cloudy, tan, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-3

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Wes Scarlett

Purge Date October 13, 1998

Purge Time 1:25 pm to 1:35 pm

Sample Date October 13, 1998

Sample Time 1:40 pm

Weather Partly cloudy, 70-75°F

Water Level and Well Data

1)	Depth to water from measuring point	11.34 ft.
2)	Depth to well bottom from measuring point	23.84 ft.
3)	Height of water column (h)	12.50 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	2.04 gal.
4)	Volume of water removed prior to sampling	6.1 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	61.9°F
2)	Specific Conductance	71.5 μmhos
3)	pH	6.2
4)	Physical Appearance and Odor	Orange, cloudy, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-4

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Wes Scarlett/Ken Vanhoy

Purge Date October 13, 1998

Purge Time 9:58 am to 10:10 am

Sample Date October 13, 1998

Sample Time 10:15 am

Weather Sunny, 60-65°F

Water Level and Well Data

1)	Depth to water from measuring point	35.62 ft.
2)	Depth to well bottom from measuring point	49.90 ft.
3)	Height of water column (h)	14.28 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well (a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	2.33 gal.
4)	Volume of water removed prior to sampling	7.0 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	59.7°F
2)	Specific Conductance	360 μmhos
3)	pH	6.0
4)	Physical Appearance and Odor	Cloudy, tan, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-5

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Wes Scarlett/Ken Vanhoy

Purge Date October 13, 1998

Purge Time 9:30 am to 9:32 am

Sample Date October 13, 1998

Sample Time 9:40 am

Weather Sunny, 55-60°F

Water Level and Well Data

1)	Depth to water from measuring point	15.82 ft.
2)	Depth to well bottom from measuring point	19.41 ft.
3)	Height of water column (h)	3.59 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	0.59 gal.
4)	Volume of water removed prior to sampling	0.6 gal.
5)	Was well purged DRY? (circle one)	(YES) NO

Field Analysis

1)	Temperature	64.0°F
2)	Specific Conductance	113.6 μmhos
3)	pH	6.3
4)	Physical Appearance and Odor	Orange, silty, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

(PVC) Steel Stainless Steel

Sampled by Wes Scarlett

Purge Date October 13, 1998

Purge Time 2:55 pm to 3:04 pm

Sample Date October 13, 1998

Sample Time 3:05 pm

Weather Sunny, 70-75°F

Water Level and Well Data

1)	Depth to water from measuring point	18.55 ft.
2)	Depth to well bottom from measuring point	27.25 ft.
3)	Height of water column (h)	8.70 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	1.42 gal.
4)	Volume of water removed prior to sampling	4.3 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	62.6°F
2)	Specific Conductance	40.8 μmhos
3)	pH	6.1
4)	Physical Appearance and Odor	Cloudy, tan, orange, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

SURFACE WATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Purge Date October 13, 1998

Source/Well SW-1

Time 10:45 am

Sampled by Ken Vanhoy

Weather Sunny, 65-70°F

Field Analysis

1)	Temperature		59.7°F
2)	Specific Conductance		79.9 μmhos
3)	pH		7.7
4)	Physical Appearance and Odor	Clear, no odor	

BPA ENVIRONMENTAL & ENGINEERING, INC.

SURFACE WATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well SW-2

Sampled by Ken Vanhoy

Purge Date October 13, 1998

Time 1:15 pm

Weather Partly cloudy, 70-75°F

Field Analysis

1)	Temperature	59°F
2)	Specific Conductance	86.8 μmhos
3)	pH	7.1
4)	Physical Appearance and Odor	Clear, no odor

SWEPSONVILLE LANDFILL
ALAMANCE COUNTY, NC
RESULTS OF WATER QUALITY SAMPLING
APRIL 1998

1.0 EXECUTIVE SUMMARY

Eleven monitoring wells and two stream locations at the Alamance County Swepsonville Landfill were sampled on April 3, 1998. All sampling was conducted according to North Carolina Solid Waste Management Guidelines. The samples were submitted to a North Carolina certified laboratory for testing using the Federal Appendix I list of constituents for detection monitoring plus mercury.

Results from the eleven monitoring well samples show that the concentrations of two inorganic constituents (chromium and lead in MW-3, MW-5, and MW-9) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Four inorganic constituents (barium, chromium, copper, and zinc) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards. Two Appendix I inorganic constituents for which no 15A NCAC 2L Standards have been established (cobalt and vanadium) were detected in one or more of the monitoring well samples.

Concentrations of four volatile organic constituents (cis-1,2-dichloroethene in MW-4; tetrachloroethene and trichloroethene in MW-2 and MW-4; and vinyl chloride in MW-4) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Two volatile organic constituents (1,1-dichloroethane and cis-1,2-dichloroethene) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards.

No Appendix I inorganic or volatile organic constituents were detected in either of the two surface water samples on the date the samples were collected.

2.0 INTRODUCTION

BPA Environmental & Engineering, Inc. was contracted by Alamance County, North Carolina to sample the ground and surface water from eleven monitoring wells and two surface water locations at the Swepsonville Landfill. The site location is shown on Figure 1.

3.0 SCOPE OF WORK

The scope of work was to sample eleven monitoring wells and two stream locations at the Swepsonville Land for Federal Appendix I organic and inorganic constituents plus mercury as listed in 40 CFR, Part 258.

4.0 METHODS EMPLOYED

4.1 Monitoring Well Sampling

Groundwater sampling took place on April 3, 1998 The wells were purged by either removing a minimum of three (3) well volumes or bailing until the wells were dry prior to obtaining water samples. The water samples were collected using properly decontaminated teflon bailers. Immediately upon collection, water samples from the monitoring wells were field tested for temperature, specific conductance, and pH. These data are summarized in Table 1. Field data sheets are included as Appendix A. Samples were placed in laboratory cleaned and supplied containers, packed on ice, and placed under chain-of-custody. Samples were shipped to the laboratory by a next day delivery service. All analyses were conducted by Environmental Conservation Laboratories, a North Carolina certified laboratory. The monitoring well locations are shown on Figure 2.

4.2 Stream Sampling

Surface water sampling took place on April 3, 1998. Samples SW-1 and SW-2 were collected from a stream that flows along the east/southeast side of the Swepsonville Landfill. The stream samples were analyzed for the same parameters as the groundwater samples. The stream sample locations are shown on Figure 2.

5.0 RESULTS

The results of the laboratory analyses for Appendix I constituents plus mercury in the groundwater and surface water are summarized in Tables 2 and 3, and the complete laboratory reports are included as Appendix B.

5.1 Groundwater

The groundwater sample analyses revealed six constituents that had concentrations at or above 2L Standards in one or more of the wells. A summary of these analytical results is provided below.

- Chromium was detected in MW-3 at 0.070 ppm, MW-5 at 0.15 ppm, and MW-9 at 0.12 ppm. The 2L Standard is 0.05 ppm.

- Lead was detected in MW-3 at 0.020 ppm, MW-5 at 0.042 ppm, and MW-9 at 0.036 ppm. The 2L Standard is 0.015 ppm.

- cis-1,2-Dichloroethene was detected in MW-4 at 250.0 ppb. The 2L Standard is 70.0 ppb.

- Tetrachloroethene was detected in MW-2 at 5.1 ppb and MW-4 at 62.0 ppb. The 2L Standard is 0.7 ppb.

- Trichloroethene was detected in MW-2 at 6.0 ppb and MW-4 at 35.0 ppb. The 2L Standard is 2.8 ppb.

- Vinyl chloride was detected in MW-4 at 15.0 ppb. The 2L Standard is 0.015 ppb.

The following six constituents were detected in one or more of the wells in concentrations below the 2L Standards.

- Barium was detected in MW-3 at 0.64 ppm, MW-5 at 0.84 ppm, and MW-9 at 0.67 ppm. The 2L Standard is 2.0 ppm.

- Chromium was detected in MW-2 at 0.019 ppm, MW-6 at 0.020 ppm, and MW-8B at 0.010 ppm. The 2L Standard is 0.05 ppm.

- Copper was detected in MW-5 at 0.20 ppm. The 2L Standard is 1.0 ppm.

- Zinc was detected in MW-1 at 0.098 ppm, MW-2 at 0.092 ppm, MW-3 at 0.24 ppm, MW-4 at 0.11 ppm, MW-5 at 0.38 ppm, MW-6 at 0.069 ppm, MW-7A at 0.051 ppm, MW-8B at 0.21 ppm, and MW-9 at 0.32 ppm. The 2L Standard is 2.1 ppm.

- 1,1-Dichloroethane was detected in MW-2 at 19.0 ppb and MW-4 at 24.0 ppb. The 2L Standard is 700 ppb.

- cis-1,2-Dichloroethene was detected in MW-2 at 5.6 ppb. The 2L Standard is 70.0 ppb.

No 2L Standards have been set for the following two potentially naturally occurring constituents that were found in detectable concentrations. The practical quantitation limits of the analyses do not serve as the standards for naturally occurring constituents.

- Cobalt was detected in MW-2 at 0.018 ppm, MW-3 at 0.046 ppm, MW-4 at 0.031 ppm, MW-5 at 0.071 ppm, MW-6 at 0.013 ppm, MW-7B at 0.010 ppm, MW-8B at 0.031 ppm, and MW-9 at 0.14 ppm.

- Vanadium was detected in MW-2 at 0.053 ppm, MW-3 at 0.21 ppm, MW-5 at 0.48 ppm, MW-8B at 0.049 ppm, and MW-9 at 0.26 ppm.

5.2 Surface Water

The results of the laboratory analyses for Appendix I constituents in the surface water samples are summarized in Tables 2 and 3 and the complete laboratory reports are included in Appendix B. No inorganic or volatile organic constituents were detected in either of the two surface water samples.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-1

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy/Julia Geniac

Purge Date April 3, 1998

Purge Time 2:50 pm to 3:00 pm

Sample Date April 3, 1998

Sample Time 3:05 pm

Weather Light rain, 55-60° F

Water Level and Well Data

1)	Depth to water from measuring point	20.30 ft.
2)	Depth to well bottom from measuring point	33.75 ft.
3)	Height of water column (h)	13.45 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon bailer
2)	Sample Method	Teflon bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	2.19 gal.
4)	Volume of water removed prior to sampling	5.0 gal.
5)	Was well purged DRY? (circle one)	(YES) NO

Field Analysis

1)	Temperature	59°F
2)	Specific Conductance	88.4 μmhos
3)	pH	5.77
4)	Physical Appearance and Odor	Cloudy, tan, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

SWEPSONVILLE LANDFILL
ALAMANCE COUNTY, NC
RESULTS OF WATER QUALITY SAMPLING
APRIL 1997

1.0 EXECUTIVE SUMMARY

Eleven monitoring wells and two stream locations at the Alamance County Swepsonville Landfill were sampled on [redacted]. All sampling was conducted according to North Carolina Solid Waste Management Guidelines. The samples were submitted to a North Carolina certified laboratory for testing using the Federal Appendix I list of constituents for detection monitoring plus mercury.

Results from the eleven monitoring well samples show that the concentrations of five inorganic constituents (barium in MW-7B, cadmium in MW-7B, chromium in MW-3, MW-7B and MW-9, lead in MW-3 and MW-7B, and Nickel in MW-7B) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Eight inorganic constituents (arsenic, barium, cadmium, chromium, copper, lead, nickel, and zinc) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards. Three Appendix I inorganic constituents for which no 15A NCAC 2L Standards have been established (beryllium, cobalt, and vanadium) were detected in one or more of the monitoring well samples.

Concentrations of three volatile organic constituents ([redacted] and t[redacted]exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. [redacted]

No inorganic or volatile organic constituents were detected in the surface water samples collected from two locations on the creek that flows along the east/southeast boundary of the landfill disposal area.

2.0 INTRODUCTION

BPA Environmental & Engineering, Inc. was contracted by Alamance County, North Carolina to sample the ground and surface water at eleven monitoring wells and two surface water locations at the Swepsonville Landfill. The site location is shown on Figure 1.

3.0 SCOPE OF WORK

This sampling task included sampling eleven monitoring wells and two locations on a nearby stream for Federal Appendix I organic and inorganic constituents plus mercury as listed in 40 CFR, Part 258.

4.0 METHODS EMPLOYED

4.1 Monitoring Well Sampling

Groundwater sampling took place on April 8, 1997. The wells were purged by either removing a minimum of three (3) well volumes or bailing until the wells were dry prior to obtaining water samples. The water samples were collected using properly decontaminated teflon bailers. Immediately upon collection, water samples from the monitoring wells were field tested for temperature, specific conductance, and pH. These data are summarized in Table 1. Field data sheets are included as Appendix A. Samples were placed in laboratory cleaned and supplied containers, packed on ice, and placed under chain-of-custody. Samples were shipped to the laboratory by a next day delivery service. All analyses were conducted by IEA, Inc., a North Carolina certified laboratory located in Cary, North Carolina. The monitoring well locations are shown on Figure 2.

4.2 Stream Sampling

Surface water sampling took place on April 8, 1997. Samples SW-1 and SW-2 were collected from a stream that flows along the east/southeast side of the Swepsonville Landfill. The stream samples were analyzed for the same parameters as the groundwater samples. The stream sample locations are shown on Figure 2.

5.0 RESULTS

The results of the laboratory analyses for Appendix I constituents plus mercury in the groundwater and surface water are summarized in Tables 2 and 3, and the complete laboratory reports are included as Appendix B.

5.1 Groundwater

The groundwater sample analyses revealed eight constituents that had concentrations at or above 2L Standards in one or more of the wells. A summary of these analytical results is provided below.

- Barium was detected in MW-7B at 2.320 ppm. The 2L Standard is 2.0 ppm.
- Cadmium was detected in MW-7B at 0.00661 ppm. The 2L Standard is 0.005 ppm.
- Chromium was detected in MW-3 at 0.137 ppm, MW-7B at 0.141 ppm, and MW-9 at 0.0766 ppm. The 2L Standard is 0.05 ppm.
- Lead was detected in MW-3 at 0.0179 ppm and MW-7B at 0.0221 ppm. The 2L Standard is 0.015 ppm.
- Nickel was detected in MW-7B at 0.109 ppm. The 2L Standard is 0.1 ppm.

- cis-1,2-Dichloroethene was detected in MW-4 at 400.0 ppb. The 2L Standard is 70.0 ppb.

- Tetrachloroethene was detected in MW-4 at 70.0 ppb. The 2L Standard is 0.7 ppb.

- Trichloroethene was detected in MW-4 at 43.0 ppb. The 2L Standard is 2.8 ppb.

The following nine constituents were detected in one or more of the wells in concentrations below the 2L Standards.

- Arsenic was detected in MW-3 at 0.0101 ppm. The 2L Standard is 0.05 ppm.

- Barium was detected in MW-3 at 1.280 ppm. The 2L Standard is 2.0 ppm.

- Cadmium was detected in MW-3 at 0.00238 ppm. The 2L Standard is 0.005 ppm.

- Chromium was detected in MW-1 at 0.0105 ppm, MW-2 at 0.021 ppm, MW-5 at 0.0464 ppm, MW-6 at 0.0483 ppm, and MW-8B at 0.013 ppm. The 2L Standard is 0.05 ppm.

- Copper was detected in MW-3 at 0.250 ppm and MW-7B at 0.265 ppm. The 2L Standard is 1.0 ppm.

- Lead was detected in MW-9 at 0.0148 ppm. The 2L Standard is 0.015 ppm.

- Nickel was detected in MW-3 at 0.0721 ppm and MW-9 at 0.0571 ppm. The 2L Standard is 0.1 ppm.

- Zinc was detected in MW-1 at 0.0864 ppm, MW-2 at 0.0814 ppm, MW-3 at 0.353 ppm, MW-5 at 0.0657 ppm, MW-6 at 0.104 ppm, MW-7B at 0.858 ppm, MW-8A at 0.0508 ppm, MW-8B at 0.174 ppm, and MW-9 at 0.199 ppm. The 2L Standard is 2.1 ppm.

- 1,1-Dichloroethane was detected in MW-2 at 14.0 ppb and in MW-4 at 35.0 ppb. The 2L Standard is 700 ppb.

No 2L Standards have been set for the following three potentially naturally occurring constituents that were found in detectable concentrations. The practical quantitation limits of the analyses do not serve as standards for naturally occurring constituents.

- Beryllium was detected in MW-1 at 0.0021 ppm, MW-3 at 0.00425 ppm, MW-7B at 0.00936 ppm, and MW-9 at 0.00416 ppm.

- Cobalt was detected in MW-2 at 0.0121 ppm, MW-3 at 0.0577 ppm, MW-4 at 0.0192 ppm, MW-6 at 0.0132 ppm, MW-7B at 0.165 ppm, MW-8B at 0.014 ppm, and MW-9 at 0.117 ppm.

- Vanadium was detected in MW-2 at 0.0732 ppm, MW-3 at 0.395 ppm, MW-5 at 0.0420 ppm, MW-6 at 0.0531 ppm, MW-7B at 0.766 ppm, MW-8B at 0.0413 ppm, and MW-9 at 0.161 ppm.

5.2 Surface Water

There were no inorganic or volatile organic constituents detected in either of the surface water samples.

SWEPSONVILLE LANDFILL
ALAMANCE COUNTY, NC
RESULTS OF WATER QUALITY SAMPLING
APRIL 1999

1.0 EXECUTIVE SUMMARY

Eleven monitoring wells and two stream locations at the Alamance County Swepsonville Landfill were sampled on April 8, 1999. All sampling was conducted according to North Carolina Solid Waste Management Guidelines. The samples were submitted to a North Carolina certified laboratory for testing using the Federal Appendix I list of constituents for detection monitoring plus mercury.

Results from the eleven monitoring well samples show that the concentrations of three inorganic constituents (cadmium in MW-2, MW-5, and MW-9; chromium in MW-2, MW-5, and MW-9; and lead in MW-9) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Six inorganic constituents (arsenic, barium, cadmium, chromium, lead, and zinc) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards. Three Appendix I inorganic constituents for which no 15A NCAC 2L Standards have been established (beryllium, cobalt, and vanadium) were detected in one or more of the monitoring well samples.

Concentrations of four volatile organic constituents (1,1-dichloroethene in MW-2; cis-1,2-dichloroethene in MW-4; and tetrachloroethene and trichloroethene in MW-2 and MW-4) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Two volatile organic constituents (1,1-dichloroethane and cis-1,2-dichloroethene) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards.

No Appendix I inorganic or volatile organic constituents were detected in either of the two surface water samples on the date the samples were collected.

2.0 INTRODUCTION

BPA Environmental & Engineering, Inc. was contracted by Alamance County, North Carolina to sample the ground and surface water from eleven monitoring wells and two surface water locations at the Swepsonville Landfill. The site location is shown on Figure 1.

3.0 SCOPE OF WORK

The scope of work was to sample eleven monitoring wells and two stream locations at the Swepsonville Landfill and have them analyzed for Federal Appendix I organic and inorganic constituents plus mercury as listed in 40 CFR, Part 258.

4.0 METHODS EMPLOYED

4.1 Monitoring Well Sampling

Groundwater sampling took place on April 8, 1999 The wells were purged by either removing a minimum of three (3) well volumes or bailing until the wells were dry prior to obtaining water samples. The water samples were collected using properly decontaminated teflon bailers. Immediately upon collection, water samples from the monitoring wells were field tested for temperature, specific conductance, and pH. These data are summarized in Table 1. Field data sheets are included as Appendix A. Samples were placed in laboratory cleaned and supplied containers, packed on ice, and placed under chain-of-custody. Samples were shipped to the laboratory by a next day delivery service. All analyses were conducted by Environmental Conservation Laboratories, a North Carolina certified laboratory. The monitoring well locations are shown on Figure 2.

4.2 Stream Sampling

Surface water sampling took place on April 8, 1999. Samples SW-1 and SW-2 were collected from a stream that flows along the east/southeast side of the Swepsonville Landfill. The stream samples were analyzed for the same parameters as the groundwater samples. The stream sample locations are shown on Figure 2.

5.0 RESULTS

The results of the laboratory analyses for Appendix I constituents plus mercury in the groundwater and surface water are summarized in Tables 2 and 3, and the complete laboratory reports are included as Appendix B.

5.1 Groundwater

The groundwater sample analyses revealed seven constituents that had concentrations at or above 2L Standards in one or more of the wells. A summary of these analytical results is provided below.

- Cadmium was detected in MW-2 at 0.011 ppm, MW-5 at 0.007 ppm, and MW-9 at 0.024 ppm. The 2L Standard is 0.005 ppm.

- Chromium was detected in MW-2 at 0.086 ppm, MW-5 at 0.074 ppm, and MW-9 at 0.26 ppm. The 2L Standard is 0.05 ppm.

- Lead was detected in MW-9 at 0.032 ppm. The 2L Standard is 0.015 ppm.

- 1,1-Dichloroethene was detected in MW-2 at 14.0 ppb. The 2L Standard is 7.0 ppb.

- cis-1,2-Dichloroethene was detected in MW-4 at 360.0 ppb. The 2L Standard is 70.0 ppb.

- Tetrachloroethene was detected in MW-2 at 15.0 ppb and MW-4 at 56.0 ppb. The 2L Standard is 0.7 ppb.

- Trichloroethene was detected in MW-2 at 20.0 ppb and MW-4 at 43.0 ppb. The 2L Standard is 2.8 ppb.

The following eight constituents were detected in one or more of the wells in concentrations below the 2L Standards.

- Arsenic was detected in MW-9 at 0.011 ppm. The 2L Standard is 0.05 ppm.

- Barium was detected in MW-2 at 1.1 ppm and MW-9 at 1.4 ppm. The 2L Standard is 2.0 ppm.

- Cadmium was detected in MW-1 at 0.003 ppm, MW-3 at 0.003 ppm, MW-4 at 0.001 ppm, MW-7B at 0.001 ppm, and MW-8B at 0.002 ppm. The 2L Standard is 0.005 ppm.

- Chromium was detected in MW-1 at 0.012 ppm and MW-3 at 0.028 ppm. The 2L Standard is 0.05 ppm.

- Lead was detected in MW-5 at 0.012 ppm. The 2L Standard is 0.015 ppm.

- Zinc was detected in MW-1 at 0.14 ppm, MW-2 at 0.30 ppm, MW-3 at 0.15 ppm, MW-4 at 0.096 ppm, MW-5 at 0.18 ppm, MW-7B at 0.063 ppm, MW-8B at 0.084 ppm, and MW-9 at 0.61 ppm. The 2L Standard is 2.1 ppm.

- 1,1-Dichloroethane was detected in MW-2 at 110.0 ppb and MW-4 at 53.0 ppb. The 2L Standard is 700.0 ppb.

- cis-1,2-Dichloroethene was detected in MW-2 at 27.0 ppb. The 2L Standard is 70.0 ppb.

No 2L Standards have been set for the following three potentially naturally occurring inorganic constituents that were found in detectable concentrations. The practical quantitation limits of the analyses do not serve as the standards for naturally occurring constituents.

- Beryllium was detected in MW-1 at 0.002 ppm, MW-2 at 0.003 ppm, MW-5 at 0.002 ppm, and MW-9 at 0.014 ppm.

- Cobalt was detected in MW-1 at 0.017 ppm, MW-2 at 0.047 ppm, MW-3 at 0.011 ppm, MW-4 at 0.050 ppm, MW-5 at 0.031 ppm, and MW-9 at 0.33 ppm.

- Vanadium was detected in MW-1 at 0.046 ppm, MW-2 at 0.32 ppm, MW-3 at 0.071 ppm, MW-4 at 0.053 ppm, MW-5 at 0.22 ppm, and MW-9 at 0.49 ppm.

5.2 Surface Water

No inorganic or volatile organic constituents were found in detectable concentrations in either of the two surface water samples.

Notes:
- All results in parts per million (ppm)
- BQL – Below practical quantitation limit
- Shaded blocks denote concentrations that do not meet 15A NCAC 2L Standards for Class GA Groundwater (MW data) or 15A NCAC 2B Standards for Class B surface waters (SW data)
- * – No 15A NCAC 2L Standard has been established for these constituents
- x – No 15A NCAC 2B Standard has been established for these constituents
- [1] Sample also analyzed by EPA Method 7841

Description: Alamance County / Swepsonville

Case Narrative:

Thirteen water samples were collected on April 8, 1999. All samples were received at ENCO Laboratories, Inc., on April 9, 1999 on wet ice and in good condition. All samples were analyzed as requested on the associated sample chain-of-custody forms.

The requests included analyses for the determination of 40 CFR, Pt. 258, Appendix I metals. The analyses were done by an "inductively coupled plasma" (ICP) technique following SW-846 EPA Method 6010 protocols. "Thallium", (Tl), is included in the list of metals determined by this method. Due to the nature of the samples analyzed, the laboratory noted spectral interferences which inhibited the accurate determination of the thallium result. The laboratory performed dilutions on the samples in order to provide method compliant data for the analyte in question. This removal of the interferences by dilution caused the resulting non-detect values to be elevated above the target MCL of 0.010 mg/L for Tl. The laboratory is in the process of re-analyzing the samples in question utilizing graphite furnace atomic absorption in an effort to provide data for the thallium results to the required level of detection.

All samples were extracted and analyzed within EPA specified holding times.

Should you have questions or require further information regarding this issue, please do not hesitate to contact the laboratory.

SWEPSONVILLE LANDFILL
ALAMANCE COUNTY, NC
RESULTS OF WATER QUALITY SAMPLING
OCTOBER 1998

1.0 EXECUTIVE SUMMARY

Eleven monitoring wells and two stream locations at the Alamance County Swepsonville Landfill were sampled on [redacted] All sampling was conducted according to North Carolina Solid Waste Management Guidelines. The samples were submitted to a North Carolina certified laboratory for testing using the Federal Appendix I list of constituents for detection monitoring plus mercury.

Results from the eleven monitoring well samples show that the concentrations of for inorganic constituents (cadmium in MW-2, MW-3, MW-4, MW-5, MW-7B, MW-8B, and MW-9; chromium in MW-3 and MW-9; lead in MW-8B; and mercury in MW-4) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Seven inorganic constituents (arsenic, barium, cadmium, chromium, copper, lead, and zinc) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards. Four Appendix I inorganic constituents for which no 15A NCAC 2L Standards have been established (beryllium, cobalt, thallium, and vanadium) were detected in one or more of the monitoring well samples.

[redacted] Three volatile organic constituents (carbon disulfide; 1,1-dichloroethane, and cis-1,2-dichloroethene) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards.

One Appendix I inorganic constituent (zinc), for which no 15 NCAC 2B Standard has been established, was detected in surface water sample SW-2. No other Appendix I inorganic or volatile organic constituents were detected in either of the two surface water samples on the date the samples were collected.

2.0 INTRODUCTION

BPA Environmental & Engineering, Inc. was contracted by Alamance County, North Carolina to sample the ground and surface water from eleven monitoring wells and two surface water locations at the Swepsonville Landfill. The site location is shown on Figure 1.

3.0 SCOPE OF WORK

The scope of work was to sample eleven monitoring wells and two stream locations at the Swepsonville Landfill and have them analyzed for Federal Appendix I organic and inorganic constituents plus mercury as listed in 40 CFR, Part 258.

4.0 METHODS EMPLOYED

4.1 Monitoring Well Sampling

Groundwater sampling took place on October 13, 1998 The wells were purged by either removing a minimum of three (3) well volumes or bailing until the wells were dry prior to obtaining water samples. The water samples were collected using properly decontaminated teflon bailers. Immediately upon collection, water samples from the monitoring wells were field tested for temperature, specific conductance, and pH. These data are summarized in Table 1. Field data sheets are included as Appendix A. Samples were placed in laboratory cleaned and supplied containers, packed on ice, and placed under chain-of-custody. Samples were shipped to the laboratory by a next day delivery service. All analyses were conducted by

Environmental Conservation Laboratories, a North Carolina certified laboratory. The monitoring well locations are shown on Figure 2.

4.2 Stream Sampling

Surface water sampling took place on October 13, 1998. Samples SW-1 and SW-2 were collected from a stream that flows along the east/southeast side of the Swepsonville Landfill. The stream samples were analyzed for the same parameters as the groundwater samples. The stream sample locations are shown on Figure 2.

5.0 RESULTS

The results of the laboratory analyses for Appendix I constituents plus mercury in the groundwater and surface water are summarized in Tables 2 and 3, and the complete laboratory reports are included as Appendix B.

5.1 Groundwater

The groundwater sample analyses revealed nine constituents that had concentrations at or above 2L Standards in one or more of the wells. A summary of these analytical results is provided below.

- Cadmium was detected in MW-2 at 0.006 ppm, MW-3 at 0.016 ppm, MW-4 at 0.011 ppm, MW-5 at 0.006 ppm, MW-7 at 0.005 ppm, MW-8B at 0.005 ppm, and MW-9 at 0.012 ppm. The 2L Standard is 0.005 ppm.

- Chromium was detected in MW-3 at 0.11 ppm and MW-9 at 0.11 ppm. The 2L Standard is 0.05 ppm.

- Lead was detected in MW-8B at 0.020 ppm. The 2L Standard is 0.015 ppm.

- Mercury was detected in MW-4 at 0.0057 ppm. The 2L Standard is 0.0011 ppm.

- 1,1-Dichloroethene was detected in MW-2 at 15 ppb. The 2L Standard is 7.0 ppb.

- cis-1,2-Dichloroethene was detected in MW-4 at 430 ppb. The 2L Standard is 70.0 ppb.

- Tetrachloroethene was detected in MW-2 at 19 ppb and MW-4 at 74 ppb. The 2L Standard is 0.7 ppb.

- Trichloroethene was detected in MW-2 at 25 ppb and MW-4 at 56 ppb. The 2L Standard is 2.8 ppb.

- Vinyl chloride was detected in MW-4 at 11.0 ppb. The 2L Standard is 0.015 ppb.

The following ten constituents were detected in one or more of the wells in concentrations below the 2L Standards.

- Arsenic was detected in MW-3 at 0.013 ppm. The 2L Standard is 0.05 ppm.

- Barium was detected in MW-2 at 0.55 ppm, MW-3 at 0.84 ppm, and MW-9 at 0.74 ppm. The 2L Standard is 2.0 ppm.

- Cadmium was detected in MW-1 at 0.003 ppm, MW-6 at 0.001 ppm, and MW-8A at 0.001 ppm. The 2L Standard is 0.005 ppm.

- Chromium was detected in MW-2 at 0.033 ppm, MW-4 at 0.013 ppm, MW-5 at 0.042 ppm, and MW-7B at 0.014 ppm. The 2L Standard is 0.05 ppm.

- Copper was detected in MW-4 at 0.22 ppm and MW-8B at 0.028 ppm. The 2L Standard is 1.0 ppm.

- Lead was detected in MW-9 at 0.011 ppm. The 2L Standard is 0.015 ppm.

- Zinc was detected in MW-1 at 0.11 ppm, MW-2 at 0.16 ppm, MW-3 at 0.27 ppm, MW-4 at 0.14 ppm, MW-5 at 0.23 ppm, MW-7B at 0.14 ppm, MW-8B at 0.44 ppm, and MW-9 at 0.30 ppm. The 2L Standard is 2.1 ppm.

- 1,1-Dichloroethane was detected in MW-2 at 74 ppb and MW-4 at 37 ppb. The 2L Standard is 700 ppb.

- cis-1,2-Dichloroethene was detected in MW-2 at 28 ppb. The 2L Standard is 70.0 ppb.

- Carbon Disulfide was detected in MW-2 at 140 ppb. The interim 2L Standard is 700 ppb.

No 2L Standards have been set for the following four potentially naturally occurring inorganic constituents that were found in detectable concentrations. The practical quantitation limits of the analyses do not serve as the standards for naturally occurring constituents.

- Beryllium was detected in MW-1 at 0.002 ppm, MW-3 at 0.002 ppm, MW-8B at 0.002 ppm, and MW-9 at 0.006 ppm.

- Cobalt was detected in MW-1 at 0.012 ppm, MW-2 at 0.029 ppm, MW-3 at 0.053 ppm, MW-4 at 0.087 ppm, MW-5 at 0.022 ppm, MW-7B at 0.021 ppm, MW-8B at 0.022 ppm, and MW-9 at 0.14 ppm.

- Thallium was detected in MW-2 at 0.012 ppm.

- Vanadium was detected in MW-1 at 0.044 ppm, MW-2 at 0.15 ppm, MW-3 at 0.34 ppm, MW-4 at 0.49 ppm, MW-5 at 0.13 ppm, MW-7B at 0.10 ppm, MW-8B at 0.044 ppm, and MW-9 at 0.25 ppm.

5.2 Surface Water

The surface water sample analyses revealed one naturally occurring constituent (zinc in SW-2 at 0.10 ppm) for which no 15A NCAC 2B surface water standard exist. No other inorganic or volatile organic constituents were detected in either of the two surface water samples.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-6

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Julia Geniac

Purge Date April 8, 1997

Purge Time 9:00 am to 9:45 am

Sample Date April 8, 1997

Sample Time 9:50 am

Weather Sunny, 50-55°F

Water Level and Well Data

1)	Depth to water from measuring point	19.91 ft.
2)	Depth to well bottom from measuring point	52.67 ft.
3)	Height of water column (h)	32.76 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h) b) 4" well . . . . (v = 0.651 x h) c) 6" well . . . . (v = 1.5 x h)	5.34 gal.
4)	Volume of water removed prior to sampling	17.0 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	58.0°F
2)	Specific Conductance	6.6 μmhos
3)	pH	7.0
4)	Physical Appearance and Odor	Slightly cloudy, milky, no odor

Client Project I.D.: 170.010 Swepsonville Landfill

Dear Mr. Scarlett,

Transmitted herewith are the results of analyses on 13 samples submitted to our laboratory.

The samples were received intact.

Analyses were performed according to approved methodologies and meet the requirements of the IEA Quality Assurance Program except where noted. Please see the enclosed reports for your results and a copy of the Chain of Custody documentation.

Thank you for selecting IEA for your sample analysis. Please do not hesitate to call me at 1-919-677-0090 or 1-800-444-9919 should you have any questions regarding this report. We look forward to serving you in the future.

Very truly yours,

IEA, Inc.

45	Vinyl Acetate	50	BQL
46	Vinyl Chloride	10	BQL
47	Xylenes (Total)	5	BQL

Comments:
Sample specific quantitation limits may be calculated by multiplying the quantitation limit by the dilution factor and/or moisture correction factor where reported.
BQL = Below Quantitation Limit
Quantitation limit elevated due to sample dilution prior to analysis.
Sample diluted due to high concentration of target compounds present.

Comments:
Sample specific quantitation limits may be calculated by multiplying the quantitation limit by the dilution factor and/or moisture correction factor where reported.
BQL = Below Quantitation Limit
N/A = Not Applicable

SWEPSONVILLE LANDFILL
ALAMANCE COUNTY, NC
RESULTS OF WATER QUALITY SAMPLING
OCTOBER 1997

1.0 EXECUTIVE SUMMARY

Eleven monitoring wells and two stream locations at the Alamance County Swepsonville Landfill were sampled on October 7, 1997. All sampling was conducted according to North Carolina Solid Waste Management Guidelines. The samples were submitted to a North Carolina certified laboratory for testing using the Federal Appendix I list of constituents for detection monitoring plus mercury.

Results from the eleven monitoring well samples show that the concentrations of one inorganic constituent (chromium in MW-3 and MW-6) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Five inorganic constituents (arsenic, barium, chromium, nickel, and zinc) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards. Three Appendix I inorganic constituents for which no 15A NCAC 2L Standards have been established (beryllium, cobalt, and vanadium) were detected in one or more of the monitoring well samples.

Concentrations of five volatile organic constituents (1,1-dichloroethene in MW-2; cis-1,2-dichloroethene in MW-4; tetrachloroethene in MW-2 and MW-4; trichloroethene in MW-2 and MW-4; and vinyl chloride in MW-4) exceeded the 15A NCAC 2L Standards for Class GA groundwater on the date the samples were collected. Two volatile organic constituents (1,1-dichloroethane and cis-1,2-dichloroethene) were detected in one or more of the monitoring well samples at concentrations that did not exceed the 2L Standards.

One Appendix I inorganic constituent for which no 15A NCAC 2B Standard for Class B,C surface waters has been established (zinc in SW-1) was detected in one surface water sample. No volatile organic constituents were detected in either of the two surface water samples.

2.0 INTRODUCTION

BPA Environmental & Engineering, Inc. was contracted by Alamance County, North Carolina to sample the ground and surface water from eleven monitoring wells and two surface water locations at the Swepsonville Landfill. The site location is shown on Figure 1.

3.0 SCOPE OF WORK

This sampling task included sampling eleven monitoring wells and two locations on a nearby stream for Federal Appendix I organic and inorganic constituents plus mercury as listed in 40 CFR, Part 258.

4.0 METHODS EMPLOYED

4.1 Monitoring Well Sampling

Groundwater sampling took place on October 7, 1997. The wells were purged by either removing a minimum of three (3) well volumes or bailing until the wells were dry prior to obtaining water samples. The water samples were collected using properly decontaminated teflon bailers. Immediately upon collection, water samples from the monitoring wells were field tested for temperature, specific conductance, and pH. These data are summarized in Table 1. Field data sheets are included as Appendix A. Samples were placed in laboratory cleaned and supplied containers, packed on ice, and placed under chain-of-custody. Samples were shipped to the laboratory by a next day delivery service. All analyses were conducted by Environmental Conservation Laboratories, a North Carolina certified laboratory. The monitoring well locations are shown on Figure 2.

4.2 Stream Sampling

Surface water sampling took place on October 7, 1997. Samples SW-1 and SW-2 were collected from a stream that flows along the east/southeast side of the Swepsonville Landfill. The stream samples were analyzed for the same parameters as the groundwater samples. The stream sample locations are shown on Figure 2.

5.0 RESULTS

The results of the laboratory analyses for Appendix I constituents plus mercury in the groundwater and surface water are summarized in Tables 2 and 3, and the complete laboratory reports are included as Appendix B.

5.1 Groundwater

The groundwater sample analyses revealed six constituents that had concentrations at or above 2L Standards in one or more of the wells. A summary of these analytical results is provided below.

- Chromium was detected in MW-3 at 0.076 ppm and MW-6 at 0.064 ppm. The 2L Standard is 0.05 ppm.

- 1,1-Dichloroethene was detected in MW-2 at 8.0 ppb. The 2L Standard is 7.0 ppb.

- cis-1,2-Dichloroethene was detected in MW-4 at 220.0 ppb. The 2L Standard is 70.0 ppb.

- Tetrachloroethene was detected in MW-2 at 9.9 ppb and MW-4 at 58.0 ppb. The 2L Standard is 0.7 ppb.

- Trichloroethene was detected in MW-2 at 14.0 ppb and MW-4 at 39.0 ppb. The 2L Standard is 2.8 ppb.

- Vinyl chloride was detected in MW-4 at 12.0 ppb. The 2L Standard is 0.015 ppb

The following seven constituents were detected in one or more of the wells in concentrations below the 2L Standards.

- Arsenic was detected in MW-3 at 0.016 ppm and MW-9 at 0.011 ppm. The 2L Standard is 0.05 ppm.

- Barium was detected in MW-2 at 0.59 ppm and MW-3 at 0.76 ppm. The 2L Standard is 2.0 ppm.

- Chromium was detected in MW-1 at 0.011 ppm, MW-2 at 0.039 ppm, MW-5 at 0.019 ppm, MW-7A at 0.018 ppm, MW-7B at 0.016 ppm, and MW-8B at 0.026 ppm. The 2L Standard is 0.05 ppm.

- Nickel was detected in MW-3 at 0.063 ppm and MW-9 at 0.059 ppm. The 2L Standard is 0.1 ppm.

- Zinc was detected in MW-1 at 0.13 ppm, MW-2 at 0.18 ppm, MW-3 at 0.25 ppm, MW-5 at 0.27 ppm, MW-6 at 0.082 ppm, MW-7A at 0.052 ppm, MW-7B at 0.078 ppm, MW-8A at 0.076 ppm, MW-8B at 0.26 ppm, and MW-9 at 0.34 ppm. The 2L Standard is 2.1 ppm.

- 1,1-Dichloroethane was detected in MW-2 at 42.0 ppb and MW-4 at 24.0 ppb. The 2L Standard is 700 ppb.

- cis-1,2-Dichloroethene was detected in MW-2 at 13.0 ppb. The 2L Standard is 70.0 ppb.

No 2L Standards have been set for the following three potentially naturally occurring constituents that were found in detectable concentrations. The practical quantitation limits of the analyses do not serve as standards for naturally occurring constituents.

- Beryllium was detected in MW-2 at 0.002 ppm, MW-3 at 0.002 ppm, MW-8B at 0.002 ppm, and MW-9 at 0.003 ppm.

- Cobalt was detected in MW-2 at 0.039 ppm, MW-3 at 0.066 ppm, MW-4 at 0.023 ppm, MW-5 at 0.011 ppm, MW-8B at 0.037 ppm, and MW-9 at 0.099 ppm.

- Vanadium was detected in MW-2 at 0.15 ppm, MW-5 at 0.042 ppm, and MW-9 at 0.13 ppm.

5.2 Surface Water

The results of the laboratory analyses for Appendix I constituents in the surface water samples are summarized in Tables 2 and 3 and the complete laboratory reports are included in Appendix B.

The following constituent was detected in one of the samples on the date the samples were collected. No 15A NCAC 2B Standards for Class B,C Surface Water has been set for this constituent.

- Zinc was detected in SW-1 at 0.64 ppm.

No other inorganic or volatile organic constituents were detected in either of the two surface water samples.

SITE LOCATION MAP

FIGURE 1

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-1

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Julia Geniac

Purge Date October 7, 1997

Purge Time 3:55 pm to 4:10 pm

Sample Date October 7, 1997

Sample Time 4:15 pm

Weather Sunny, 80-85°F

Water Level and Well Data

1)	Depth to water from measuring point	24.57	ft.
2)	Depth to well bottom from measuring point	33.75	ft.
3)	Height of water column (h)	9.18	ft.
4)	Measuring point description	Top of 2-inch PVC Casing	

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer	
2)	Sample Method	Teflon Bailer	
3)	Volume of water in well		
	(a) 2" well . . . . (v = 0.163 x h)		
	b) 4" well . . . . (v = 0.651 x h)	1.50	gal.
	c) 6" well . . . . (v = 1.5 x h)		
4)	Volume of water removed prior to sampling	4.5	gal.
5)	Was well purged DRY? (circle one)	YES (NO)	

Field Analysis

1)	Temperature	65.5°F
2)	Specific Conductance	94.7 μmhos
3)	pH	5.1
4)	Physical Appearance and Odor	Cloudy, tan, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-2

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy

Purge Date October 7, 1997

Purge Time 3:00 pm to 3:05 pm

Sample Date October 7, 1997

Sample Time 3:15 pm

Weather Sunny, 80-85°F

Water Level and Well Data

1)	Depth to water from measuring point	26.93	ft.
2)	Depth to well bottom from measuring point	29.30	ft.
3)	Height of water column (h)	2.37	ft.
4)	Measuring point description	Top of 2-inch PVC Casing	

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer	
2)	Sample Method	Teflon Bailer	
3)	Volume of water in well		
	(a) 2" well . . . . (v = 0.163 x h)	—	
	b) 4" well . . . . (v = 0.651 x h)	0.39	gal.
	c) 6" well . . . . (v = 1.5 x h)		
4)	Volume of water removed prior to sampling	0.5	gal.
5)	Was well purged DRY? (circle one)	(YES) NO	

Field Analysis

1)	Temperature	66.2°F
2)	Specific Conductance	163.6 μmhos
3)	pH	5.4
4)	Physical Appearance and Odor	Cloudy, tan, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-3

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Julia Geniac

Purge Date October 7, 1997

Purge Time 2:10 pm to 2:25 pm

Sample Date October 7, 1997

Sample Time 2:35 pm

Weather Clear, 85-90°F

Water Level and Well Data

1)	Depth to water from measuring point	11.14 ft.
2)	Depth to well bottom from measuring point	23.84 ft.
3)	Height of water column (h)	12.70 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	—
	b) 4" well . . . . (v = 0.651 x h)	2.07 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	7.0 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	64.2°F
2)	Specific Conductance	74.6 μmhos
3)	pH	5.9
4)	Physical Appearance and Odor	Orange, cloudy, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-4

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy

Purge Date October 7, 1997

Purge Time 1:30 pm to 1:50 pm

Sample Date October 7, 1997

Sample Time 1:50 pm

Weather Clear, 80-90°F

Water Level and Well Data

1)	Depth to water from measuring point	35.76 ft.
2)	Depth to well bottom from measuring point	49.90 ft.
3)	Height of water column (h)	14.14 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	—
	b) 4" well . . . . (v = 0.651 x h)	2.3 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	7.0 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	64.8°F
2)	Specific Conductance	399 μmhos
3)	pH	5.6
4)	Physical Appearance and Odor	Clear, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-5

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy/Julia Geniac

Purge Date October 7, 1997

Purge Time 10:15 am to 10:20 am

Sample Date October 7, 1997

Sample Time 10:30 am/4:30 pm

Weather Clear, 60-70°F

Water Level and Well Data

1)	Depth to water from measuring point	16.79 ft.
2)	Depth to well bottom from measuring point	19.41 ft.
3)	Height of water column (h)	2.62 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	—
	b) 4" well . . . . (v = 0.651 x h)	0.43 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	.40 gal.
5)	Was well purged DRY? (circle one)	(YES) NO

Field Analysis

1)	Temperature	59.7°F
2)	Specific Conductance	116.6 μmhos
3)	pH	5.6
4)	Physical Appearance and Odor	Orange, silty, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-6

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Julia Geniac

Purge Date October 7, 1997

Purge Time 10:55 am to 11:30 am

Sample Date October 7, 1997

Sample Time 11:30 am

Weather Sunny, 80-85°F

Water Level and Well Data

1)	Depth to water from measuring point	21.37 ft.
2)	Depth to well bottom from measuring point	52.67 ft.
3)	Height of water column (h)	31.30 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	—
	b) 4" well . . . . (v = 0.651 x h)	5.10 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	15.3 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	62.8°F
2)	Specific Conductance	111.3 μmhos
3)	pH	6.4
4)	Physical Appearance and Odor	Clear to slightly cloudy, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-7A

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Julia Geniac

Purge Date October 7, 1997

Purge Time 12:00 pm to 12:55 pm

Sample Date October 7, 1997

Sample Time 1:15 pm

Weather Clear, 80-85°F

Water Level and Well Data

1)	Depth to water from measuring point	26.04 ft.
2)	Depth to well bottom from measuring point	63.30 ft.
3)	Height of water column (h)	37.26 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	
	b) 4" well . . . . (v = 0.651 x h)	6.07 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	18.5 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	61.2°F
2)	Specific Conductance	101.3 μmhos
3)	pH	6.2
4)	Physical Appearance and Odor	Clear, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-7B

Locked: (Yes) No

(PVC) Steel Stainless Steel

Sampled by Ken Vanhoy

Purge Date October 7, 1997

Purge Time 12:05 pm to 12:10 pm

Sample Date October 7, 1997

Sample Time 12:30 pm

Weather Clear, 80-85°F

Water Level and Well Data

1)	Depth to water from measuring point	26.81 ft.
2)	Depth to well bottom from measuring point	32.46 ft.
3)	Height of water column (h)	5.65 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	—
	b) 4" well . . . . (v = 0.651 x h)	0.92 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	1.0 gal.
5)	Was well purged DRY? (circle one)	(YES) NO

Field Analysis

1)	Temperature	61.7°F
2)	Specific Conductance	100.5 μmhos
3)	pH	6.2
4)	Physical Appearance and Odor	Orange, silty, no odor

GROUNDWATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well MW-9

Locked: Yes (No)

(PVC) Steel Stainless Steel

Sampled by Julia Geniac

Purge Date October 7, 1997

Purge Time 3:35 pm to 3:45 pm

Sample Date October 7, 1997

Sample Time 3:50 pm

Weather Sunny, 80-90°F

Water Level and Well Data

1)	Depth to water from measuring point	18.33 ft.
2)	Depth to well bottom from measuring point	27.25 ft.
3)	Height of water column (h)	8.92 ft.
4)	Measuring point description	Top of 2-inch PVC Casing

Well Purging and Sample Collection

1)	Purge Method	Teflon Bailer
2)	Sample Method	Teflon Bailer
3)	Volume of water in well	
	(a) 2" well . . . . (v = 0.163 x h)	
	b) 4" well . . . . (v = 0.651 x h)	1.45 gal.
	c) 6" well . . . . (v = 1.5 x h)	
4)	Volume of water removed prior to sampling	4.5 gal.
5)	Was well purged DRY? (circle one)	YES (NO)

Field Analysis

1)	Temperature	67.5°F
2)	Specific Conductance	44.7 μmhos
3)	pH	6.6
4)	Physical Appearance and Odor	Tan and orange, cloudy, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

SURFACE WATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well SW-1

Sampled by Ken Vanhoy

Sample Date October 7, 1997

Sample Time 11:00 am

Weather Sunny, 70-80°F

Field Analysis

1)	Temperature	65.4°F
2)	Specific Conductance	128.4 μmhos
3)	pH	7.1
4)	Physical Appearance and Odor	Clear, no odor

BPA ENVIRONMENTAL & ENGINEERING, INC.

SURFACE WATER SAMPLING FIELD DATA

Location Swepsonville Landfill

Source/Well SW-2

Sampled by Ken Vanhoy

Sample Date October 7, 1997

Sample Time 2:20 pm

Weather Sunny, 85-90°F

Field Analysis

1)	Temperature		68.2°F
2)	Specific Conductance		158 μmhos
3)	pH		6.8
4)	Physical Appearance and Odor	Clear, no odor
