N/A

The item(s) listed above were observed by Section staff and require action on behalf of the facility in order to come into or maintain compliance with the Statutes, Rules, and/or other regulatory requirements applicable to this facility. Be advised that pursuant to N.C.G.S. 130A-22, an administrative penalty of up to \$15,000 per day may be assessed for each violation of the Solid Waste Laws, Regulations, Conditions of a Permit, or Order under Article 9 of Chapter 130A of the N.C. General Statutes. Further, the facility and/or all responsible parties may also be subject to enforcement actions including penalties, injunction from operation of a solid waste management facility or a solid waste collection service and any such further relief as may be necessary to achieve compliance with the North Carolina Solid Waste Management Act and Rules.

ADDITIONAL COMMENTS

1. All photographs were taken by Troy Harrison on November 4, 2015.
2. The Septage Land Application Site consists of Field 1 (6.33 acres) and Field 2 (2.28 acres) for a total of 8.61 usable acres.
3. The site is permitted for land application of domestic septage (including portable toilet waste) and grease septage.
4. The site is located at 7337 Reeps Grove Church Road, Vale, NC and had accessible all-weather roads to the septage land application field covered under the permit.
5. Appropriate signage was displayed at the site.

Sign at entrance to fields

6. Field 1 disposal area boundaries were well delineated with permanent markers which corresponded to the site map. On Field 2 there appeared to be one or two missing field markers along the back side to delineate the 50' setback from the property line. The fence/vegetation that were present when the fields were originally mapped was no longer present on southern boundary of fields 1, 2 and beside the neighboring field/distant house, however, disposal area markers were in place.

Field 1

7. All septage discharges appear to have been made within the disposal area boundary. No recent septage application were observed.

8. No evidence of standing liquid or pooled waste was observed. The waste appeared to be evenly distributed throughout the field.
9. No objectionable odors were observed.
10. The nutrient management plan appears to have been followed on all fields with a good crop stand of fescue observed with the exception of a few scattered areas with weak growth. These weak areas are being addressed, according to Mr. Hoyle.
11. Site logs were not reviewed at this time but, will be submitted with permit renewal for March 2016.
12. Soil samples were collected from the field. The check for soil sampling was received.
