RE: **Confirmation of Telephone Conversation**
Exxon Company # 4-3998
4701 W. Market Street
Greensboro, Guilford County
Incident # 10001

Dear Mr. Medlin:

This letter is to confirm a telephone conversation between Elliot Nightingale of Nightingale Geologic Consultants, P.C. and Melanie Wells of this office today. Several issues relating to the subject site were discussed:

- (1) A water supply well is located (102 Thornton Court) within 1,000 feet of the source area of a confirmed discharge or release, but is not known at this time to be utilized as a potable water source. The presence of this water supply well within the vicinity will not indicate a high risk ranking for the subject site;
- (2) The site's AAS/SVE remediation system will continue to be operated as proposed in your March 9, 1998 correspondence with this office;
- (3) The site sampling activities as proposed in the March 9, 1998 correspondence and the March 25, 1998 Trust Fund Preapproval request submitted by Nightingale Geologic Consultants, P.C. will be continued uninterrupted. The specific sampling schedule given in these earlier submittals must be maintained, and;
- (4) The SVE exhaustor unit pressure relief valve which was found to be defective on March 5, 1998 will be replaced as soon as possible. This office understands that the replacement valve has been ordered and that the remediation system will be restarted as soon as the valve is replaced.

Thank you for your consideration. If you have any questions about the subject site, please contact Melanie Wells at Guilford County Environmental Health, 1100 E. Wendover Avenue, Greensboro, NC 27405 or at (336) 337-3771.

Sincerely,

Cindy H. Rintoul
Regional Supervisor
