RE: Gate City Truck Repair (ARA / Smith's)
6301 Burnt Poplar Road
Greensboro, NC
Groundwater Incident # 10077

Dear Mr. Zappia:

Pyramid Environmental has completed a Soil Excavation and Sampling Investigation for the above referenced site. Enclosed is a copy of the report for your perusal. If you have any questions or comments, please call me.

Respectfully,

Martin Cope Livingston, III

Soil Excavation and Sampling Investigation
Former 500 Gallon Gasoline Tank and 10,000
Gallon Diesel Tank Area
Gate City Truck Repair
Greensboro, North Carolina

1.0 EXECUTIVE SUMMARY

On January 25-26, 1993, three underground storage tanks (UST's) were removed from the Gate City Truck Repair property, located at 6301 Burnt Poplar Road in Greensboro, North Carolina. The UST's consisted of one 10,000 gallon diesel UST, one 500 gallon gasoline UST and one 500 gallon waste-oil UST. Analysis of soil samples in the vicinity of the gasoline and diesel UST's showed total petroleum hydrocarbon (TPH) concentrations as high as 46 ppm (parts per million) by EPA Method 5030 and 240 ppm by Method 3550. These concentrations are above the final clean-up levels according to NCDEHNR guidelines. Analysis of soil samples taken beneath the waste-oil UST were below state action levels by EPA Method 9071.

A Comprehensive Site Assessment (CSA) dated March 8, 1994, was submitted by Shield Environmental, Inc. for the site. Addenda to the CSA were submitted in reports dated August 29, 1994, by Triangle Environmental, Inc., and June 19, 1995 by Pyramid Environmental, Inc.. Soil investigations determined the extent of the affected soil TPH above 10 ppm by Method 5030 to be approximately 150-200 ft², and the extent of soil above 40 ppm by Method 3550 to be approximately 450-500 ft².

Samples of groundwater from several monitoring wells on and near the property showed concentrations of BTEX (benzene, toluene, ethylbenzene, and xylenes) as high as 4636 ppb (parts per billion) by EPA method 602, as well as low levels of several other hydrocarbon compounds. The hydrocarbon plume extends over an area of approximately 16,000 ft². No free product has been observed in any of the wells. Pyramid Environmental proposed a Corrective Action Plan (CAP) for the site which involved excavation and off-site disposal of petroleum-contaminated soil and natural (passive) remediation of the groundwater for the site.

On June 20, 1996, approximately 350 tons of soil were excavated from the former 500 gallon gasoline UST and 10,000 gallon diesel UST locations. Soil was excavated to limits established by previous soil sampling results as well as on site observations of the soil during the June 20 excavation. Soil samples were taken and sent to a North Carolina certified laboratory to document the success of the excavation.

At the time of the excavation, a fuel oil UST was discovered on the southwest corner of the Gate City Truck Repair Building (Figure 2). This tank was not in use and was removed following NCDEHNR (North Carolina Department of Environment, Health, and Natural Resources) regulations regarding the removal of UST's. The closure assessment performed on this tank is documented in a separate report.

2.0 SOIL SAMPLING AND ANALYSIS

On June 20, 1996, a staff member of Pyramid Environmental supervised the excavation and removal of approximately 350 tons of soil in the former location of the 500 gallon gasoline UST and the 10,000 gallon diesel UST. Soil was excavated using a track hoe and was loaded directly onto tandem trailers for transport to Carlisle Farms, Inc., a North Carolina licensed disposal site.

In the area of the former 500 gallon gasoline UST, the final limits of the excavation measured 24' (L) x 20' (W) x 14' (D). Backfill material used after the removal and initial site assessment performed on the UST was observed to be mixture of sand fill and petroleum impacted native soil. This soil along with suspect soil from the walls of the excavation was loaded directly into tandem trailers for disposal on June 20, 1996. It is the professional opinion of Pyramid Environmental that the excavation extended only into the capillary fringe and not to the groundwater table. Excavation was stopped at the 14' depth before groundwater was encountered (Figure 3).

In the area of the former 10,000 gallon diesel UST, the final limits of the excavation measured 25' (L) x 23' (W) x 12' (D; see Figure 3). Clean backfill from the removal and initial site assessment performed on the UST was removed from the excavation and stockpiled on site to be used again as backfill. This clean backfill extended down to approximately 11'. A zone of backfill and petroleum impacted native soil was observed from 11' to 12', and this soil plus suspect soil from the excavation walls was loaded directly into tandem trailers for disposal.

Table I outlines the samples obtained from the excavation on June 20, 1996:

Table I

Sample	Location	Depth from Ground Surface
S-1	pit floor	14'
S-3	pit wall	10'
S-5	pit wall	10'
S-7	pit wall	10'
S-9	pit wall	6.5'

S-19	pit wall	6'
S-20	pit bottom	10'
S-21	*	*

*Sample S-21 was a composite sample of soil removed from the excavation on 6/20/96

All samples were collected from the bucket of a track hoe. The sample locations are shown on Figure 2. The following quality control measures were followed while obtaining the samples:

Quality Control Measures

1. New, sterile latex gloves were worn while obtaining the samples.
2. Samples were loaded into clean, amber-glass 4 ounce jars and sealed with air tight lids.

The samples were screened with an organic vapor meter (OVM) and placed in a cooler maintained at approximately 4°C. Table II shows the results of the OVM screening of the samples. The samples were sent to a North Carolina certified laboratory for analysis using EPA Methods 5030 and 3550. The results are shown in Table III and Figure 2.

ppm = parts per million NA=Not Applicable

BDL = Below Detection Limit

Sample S-21 was a composite sample made from 3 separate locations; see Figure 2

A complete copy of the lab results and chain of custody are contained in Appendix A. A copy of the soil disposal manifests are included in Appendix B.

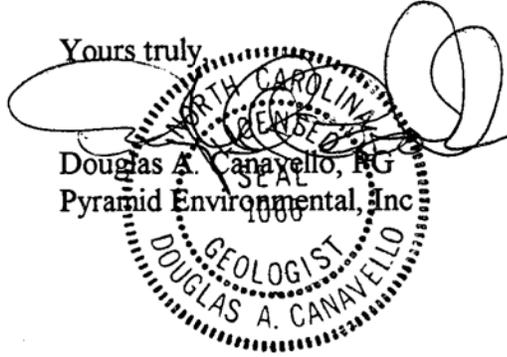

3.0 CONCLUSIONS / RECOMMENDATIONS

On June 20, 1996, Pyramid Environmental supervised the excavation of approximately 350 tons of soil. The soil was excavated from the former 500 gallon gasoline and 10,000 gallon diesel UST pits. A maximum TPH of 37.4 ppm by EPA Method 5030 was found in sample S-21, a composite sample taken from soil removed during the June 20, 1996 excavation. This sample was taken to document the TPH levels of the soil being removed. The laboratory analytical results of soil samples taken from the excavation walls and floors indicate no remaining TPH (total petroleum hydrocarbon) levels above the state action level for EPA Methods 5030 or 3550. The sample results indicate successful remediation of the site soils satisfying the requirements established in the CAP for the site.

4.0 CLOSURE

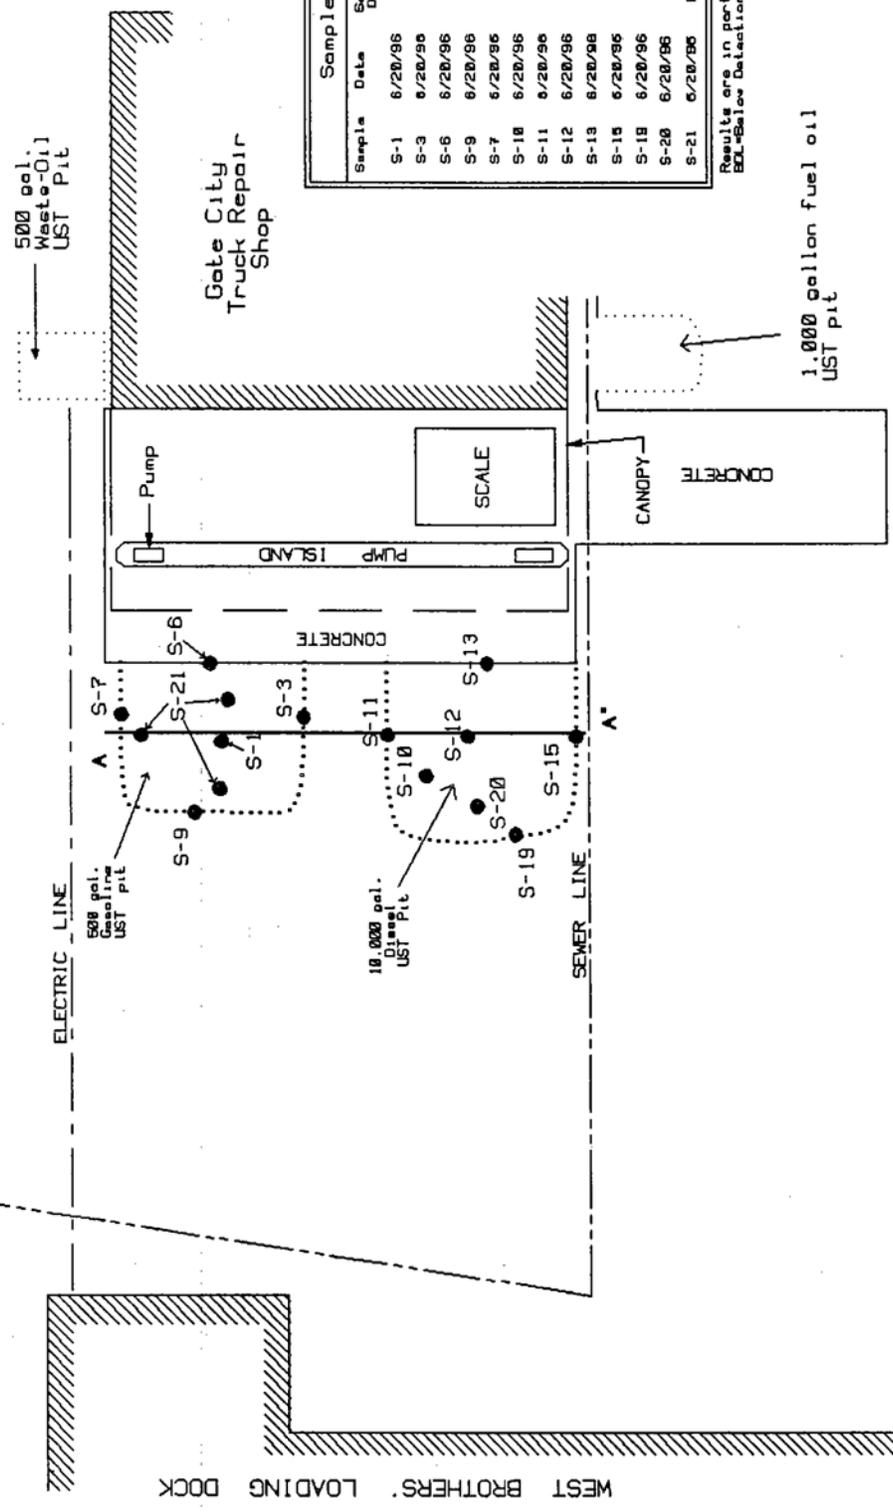

The observations, conclusions and recommendations documented in this report are based on site conditions and information available at the time of Pyramid's investigation. Pyramid Environmental, Inc. appreciates the opportunity to provide this service.

Yours truly

Douglas A. Canavello, RG
Pyramid Environmental, Inc
