Re: Reply to Notice of Regulatory Requirements
30,000 Gallon Fuel Oil UST Excavation
Draper Corporation, 5644 Hornaday Road
Greensboro, North Carolina

Dear Ms. Gage:

In response to the "Notice Of Regulatory Requirements" received by Draper Corporation on January 8, 1993;

Response to 15 A NCAC 2N .0703: The discovery of release was associated with the attempted removal of the 30,000 gal. UST on December 11, 1992. As you were present on the site at this time, and it was obvious that a release had occurred, no other report was made to your office. A site check was performed during tank removal, and the source of the release has been eliminated. No vapor or fire hazards were apparent at the site and no free product was found. A closure report describing the details of the removal and soil sampling associated with this 30,000 gallon No. 4 Fuel Oil tank was mailed to Guilford County Emergency Services by Triad Environmental Consultants, Inc. on January 21, 1992.

Response to 15 A NCAC 2N .0704: Draper Corporation has assembled the following information on the nature and quantity of the release. An unknown quantity of No. 4 Fuel Oil was released from the 30,000 UST system. Field observations during tank removal appear to indicate that the release was associated with failure of the piping at the tank top. No free phase product was observed during tank removal or during the subsequent installation of an adjacent groundwater monitoring well. The quantity of fuel oil released appears to be minimal, and current data indicate that the majority of the impact of this release is restricted to the immediate tank area.

Your assistance during this project has been appreciated and we look forward to working with you in the future. If we can be of any help to you, please contact us.

Respectfully,

Dan M. Groome
