H&H Project No. BAI.002

Dear Ms. MacDonald:

Hart & Hickman is pleased to provide this quarterly status report for the above-referenced site. Field activities outlined in the Remedial Investigation Work Plan, dated October 20, 2010, were completed in late February and March 2011. Details regarding the work completed were included in the quarterly report submitted in April.

The data from those activities were evaluated and due to trichloroethene (TCE) being detected in a well installed on the adjacent property at a concentration of 30 ug/l, the well was re-sampled in May. The results of the re-sampling confirmed the presence of TCE at a similar concentration (34 ug/l). The Remediating Party (RP) notified the adjacent property owner and the REC Program was notified in an email dated June 20, 2011.

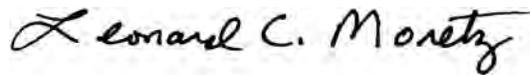

The level of TCE is relatively low and the well is very close to the RP's property line so it is unlikely that a significant portion of the adjacent property has been impacted. No field activities or reporting was completed during the third quarter of 2011 however, installation of additional wells is planned to delineate the plume on the adjacent property in the near future. It is anticipated that a Remedial Investigation Report will be prepared and submitted once the results of this additional work are evaluated.

Ms. Janet MacDonald
