Re: Merchants Metal Site Referral, Iredell County

I am referring this site to your Branch as, after further site investigation, the contamination is not solely caused by hazardous waste. The site has groundwater contamination, and has contributed to stream sediment contamination. The contaminants are associated with zinc galvanizing process that was used at the site.

Attached to this letter are reports on the site investigation to date. If you have any questions, please contact me at the numbers/ address listed below.

Sincerely,

Roberta Proctor  
Environmental Chemist  
Hazardous Waste Section
