Re: **NOTICE OF REGULATORY REQUIREMENTS FOR CONTAMINANT ASSESSMENT AND CLEANUP**

Pitt County School Bus Garage
901 Mall Drive
Greenville, Pitt County, NC
Site ID No: Pending

Dear Mr. Hite:

The Underground Storage Tank ("UST") Section of the Division of Waste Management has referred the subject site to the Inactive Hazardous Sites Branch ("Branch") of the Division's Superfund Section. The August 17, 2010 Limited Site Investigation Report ("LSA"), prepared by Terracon, indicates chlorinated solvents have been detected at the subject site. Depending on the contaminants involved and whether the contaminants have impacted or may impact groundwater quality, you will be required to assess and cleanup the contamination under one or more cleanup authorities. Regulatory oversight for the assessment and cleanup under all applicable authorities will be provided by the Branch. The UST Section will continue to provide oversight of all petroleum related cleanup activities.

Based on information provided to date, the Inactive Hazardous Sites Response Act ("IHSRA"), codified under N.C. Gen. Stat. § 130A-310, *et seq.*, applies to your site. In addition, initial immediate actions may be required under 15A NCAC 2L, Groundwater Classifications and Standards.

I. ACTIONS REQUIRED AT THIS TIME:

Complete the Site Cleanup Questionnaire.

To comply with the requirements of State law, a Site Cleanup Questionnaire, available on the website noted at the end of this letter, must be completed and returned to this office. The information you provide will be reviewed along with other information to prioritize the site, so please make certain that the information you provide is complete and accurate. Please note that your failure to inform the Branch of any nearby potable wells or other high risk conditions may adversely affect the Branch's ability to identify this site as a higher-risk site.
