Scott,

The analytical results submitted by the City of Statesville indicate that on-site soil in the sampled area can be used to maintain the monofill.

Metals detected in the soil samples seemed to be within the range of constituent concentrations reported for background samples collected during trench closure. The reported metals concentrations also compared favorably with the analytical results for off-site soil samples that were submitted in September 2012.

Mr. Stanley,

I was checking to see if the fill dirt results were going to be good to use at the mono-fil site.
Scott
