Re: Engineered Controls International, LLC/100 Rego Drive, Elon, Alamance County

Dear Ms. Murphy:

As you know, this firm represents Engineered Controls International, LLC (“ECI”). As we have discussed, we have received your May 15, 2012 notice of regulatory requirements (the “NORR”) for contaminant assessment and cleanup at the above-referenced facility. In addition, on July 27, 2012, the Division of Waste Management provided notice that the Division has determined that the facility can be cleaned up through the Registered Environmental Consultant (“REC”) Program without direct oversight by Division staff. ECI intends to enter the REC Program and will provide separately to the Division information necessary to prepare an appropriate Administrative Agreement.

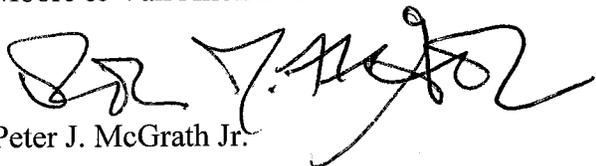

The NORR also requested that ECI perform a soil vapor investigation at the site and submit the results to you within 90 days of the date of the NORR. ECI has been working diligently to prepare workplans for comprehensive assessment of the facility in accordance with REC Program guidance. The workplans would include the soil vapor investigation you have requested. ECI intends to perform the requested soil vapor investigation contemporaneously with other facility investigation activities in order to avoid redundant activities at the facility. As a result, the soil vapor investigation is not yet complete. We expect that we will be able to complete the investigation and submit a full report to you by the end of September. We, therefore, request an extension, to September 30, of the deadlines suggested in the NORR for submission of the results of the soil vapor investigation.
