Categories: Trex

David,

After talking this over, Sandy and I agree that an 8-hour test is sufficient. The one stipulation is that the test be conducted on a Monday after Leather Trimmings' building has been closed for the weekend.

Please let me know if you have any questions,
Kathy

Subject: Nexus and Leather Trim IA sampling

Kathy:

W&R is gearing up for the next round of sampling at Nexus Church and Leather Trimmings, which they are currently planning for the last week of August. For the next round of sampling W&R (and Trex) is proposing an 8-hour vs. 24-hour composite samples, as this would be more representative of IA and OA conditions during a typical day, and would be in line with the requirements set forth in your letter of March 23, 2016 ("The sampling event must be representative of the working conditions").

As this is a change from the past sampling conditions W&R and Trex are requesting confirmation from NCDEQ that the 8-hour sampling meets with the conditions as set forth in the March 23, 2016 letter. This request is being made to ensure the proper regulators are obtained for the next sampling event.

Thank you for help and consideration. If you have any questions do not hesitate to give me a call (please note, that I will be on vacation from 08.09.16 – 08.16.16; however, I will respond to calls or any voice mail messages that are left for me).

Best regards,

David Craig
