Re: **Request for Crawl Space or Basement Air Sampling**
1851 Windmill Lane
Lincolnton, Lincoln County, North Carolina
NCN000410439

Dear Property Owners:

The Inactive Hazardous Sites Branch (IHSB) of the North Carolina Division of Waste Management (Division) has reviewed Lincoln County tax records that indicate you may own property at the above referenced location. The Division is proposing to oversee environmental assessment activities at select properties along Southfork Road, Southside Road, and Bynum Road in Lincolnton, Lincoln County.

Background

In 1996, the Division of Water Resources (DWR) began a groundwater investigation in the Southside Road neighborhood. Groundwater samples were collected from water-supply wells and analyzed for select Volatile Organic Compounds (VOCs). Dissolved concentrations of tetrachloroethene (PCE) were reported above Federal drinking water standards. Subsequently, Lincoln County Commissioners reduced the connection fees to municipal water at residential properties affected by this contamination. The DWR investigation concluded by May 2000.

In August 2008, the IHSB performed a review of the Division records and offered financial assistance for a municipal connection at select properties with active water-supply wells and previously reported PCE contamination. In May 2009, the Division conducted limited well sampling and forwarded the Site to the United States Environmental Protection Agency (USEPA). In July 2009, the USEPA performed a groundwater sampling event and provided municipal water connections to three residences. In 2015, the Division followed up with additional sampling of water-supply wells.

Purpose & Scope

The purpose of this letter is to solicit your participation in a limited assessment to investigate the structural vapor intrusion potential at the residential structure located at the address above. Reported concentrations of PCE in groundwater in your community exceed the Division's Residential Vapor Intrusion Screening Concentrations, which suggests the potential to affect the indoor air quality within homes in your community.

At the present time, the remedial investigation of hazardous substance discharge remains incomplete and the current configuration of the groundwater plume is not known. Because the source of contamination has not been determined, the IHSB is proposing to collect air samples from residential crawl spaces or basements at select locations with or near previously reported water-supply wells impacted with PCE.

With your permission, the IHSB will contract to deploy a Summa canister in a crawl space or basement of your residence. The Summa canister is a 6 liter stainless steel round container that is designed to collect an air sample over a designated time interval such as 8 or 24 hours. The size of a Summa canister resembles a typical basketball. If you grant access, the IHSB and/or its contractor will contact you to conduct a short interview about VOCs that may already be present in your crawl space or basement. The contactor will also schedule a convenient time to deploy the canister and collect it approximately 24 hours later. If insufficient space exists in the substructure for a Summa canister, a smaller passive device may be used instead.

Property Access Authorization & Sampling Permission

Please complete the enclosed Property Access Authorization & Sampling Permission Form and indicate if you "**Yes**, grant" or "**No**, do not grant" authorization and permission to access and collect air samples at your property. Please return the form to me in the enclosed self-addressed and postage-paid envelope by **April 15, 2016**.

The proposed environmental assessment activities described in this letter will be performed at no cost to you. Upon the conclusion of assessment activities, a copy of our findings will be sent to you at the address referenced above. If you have questions regarding the proposed work or need further information, please contact me at george.adams@ncdenr.gov or (704) 663-1699.

Sincerely,

/s/ *George Adams*

PROPERTY ACCESS AUTHORIZATION & SAMPLING PERMISSION FORM

I am the owner of the property located at _____, and I am authorized to complete this form.

PLEASE CHECK ONE OF THE FOLLOWING

☐ **YES, I grant the Division of Waste Management and/or its contractors permission to access my property and collect samples (as described below) from my property.**

☐ **NO, I do not grant the Division of Waste Management and/or its contractors permission to access my property and collect samples from my property.**

Proposed samples that may be collected from my property include the following:

___ **Potable Well - Does your well have a treatment system? (Yes/No) _____**

___ **Soil**

___ **Groundwater**

_X_ **Other (Include Description) Crawl Space and/or Basement Air Samples**

Analyses: _X_ **VOCs** ___ **SVOCs** ___ **Metals** ___ **Pesticides** ___ **Other**

_____ _____

(Print Name) ***(Telephone Number)***

_____ _____

(Signature) ***(Date)***

Please return a completed form by April 15, 2016 by using the self-addressed and postage-paid envelope and sending it to the address below or by fax to (704) 663-6040.

Dear Property Owner:

The Inactive Hazardous Sites Branch (IHSB) of the North Carolina Division of Waste Management (Division) has reviewed Lincoln County tax records that indicate you may own property at the above referenced location. The Division is proposing to oversee environmental assessment activities at select properties along Southfork Road, Southside Road, and Bynum Road in Lincolnton, Lincoln County.

Background

In 1996, the Division of Water Resources (DWR) began a groundwater investigation in the Southside Road neighborhood. Groundwater samples were collected from water-supply wells and analyzed for select Volatile Organic Compounds (VOCs). Dissolved concentrations of tetrachloroethene (PCE) were reported above Federal drinking water standards. Subsequently, Lincoln County Commissioners reduced the connection fees to municipal water at residential properties affected by this contamination. The DWR investigation concluded by May 2000.

In August 2008, the IHSB performed a review of the Division records and offered financial assistance for a municipal connection at select properties with active water-supply wells and previously reported PCE contamination. In May 2009, the Division conducted limited well sampling and forwarded the Site to the United States Environmental Protection Agency (USEPA). In July 2009, the USEPA performed a groundwater sampling event and provided municipal water connections to three residences. In 2015, the Division followed up with additional sampling of water-supply wells.

Purpose & Scope

The purpose of this letter is to solicit your participation in a limited assessment to investigate the structural vapor intrusion potential at the residential structure located at the address above. Reported concentrations of PCE in groundwater in your community exceed the Division's Residential Vapor Intrusion Screening Concentrations, which suggests the potential to affect the indoor air quality within homes in your community.

At the present time, the remedial investigation of hazardous substance discharge remains incomplete and the current configuration of the groundwater plume is not known. Because the source of contamination has not been determined, the IHSB is proposing to collect air samples from residential crawl spaces or basements at select locations with or near previously reported water-supply wells impacted with PCE.

With your permission, the IHSB will contract to deploy a Summa canister in a crawl space or basement of your residence. The Summa canister is a 6 liter stainless steel round container that is designed to collect an air sample over a designated time interval such as 8 or 24 hours. The size of a Summa canister resembles a typical basketball. If you grant access, the IHSB and/or its contractor will contact you to conduct a short interview about VOCs that may already be present in your crawl space or basement. The contactor will also schedule a convenient time to deploy the canister and collect it approximately 24 hours later. If insufficient space exists in the substructure for a Summa canister, a smaller passive device may be used instead.

Property Access Authorization & Sampling Permission

Please complete the enclosed Property Access Authorization & Sampling Permission Form and indicate if you "**Yes**, grant" or "**No**, do not grant" authorization and permission to access and collect air samples at your property. Please return the form to me in the enclosed self-addressed and postage-paid envelope by **April 15, 2016**.

The proposed environmental assessment activities described in this letter will be performed at no cost to you. Upon the conclusion of assessment activities, a copy of our findings will be sent to you at the address referenced above. If you have questions regarding the proposed work or need further information, please contact me at george.adams@ncdenr.gov or (704) 663-1699.

Residential Vapor Intrusion Screening Concentrations, which suggests the potential to affect the indoor air quality within homes in your community.

At the present time, the remedial investigation of hazardous substance discharge remains incomplete and the current configuration of the groundwater plume is not known. Because the source of contamination has not been determined, the IHSB is proposing to collect air samples from residential crawl spaces or basements at select locations with or near previously reported water-supply wells impacted with PCE.

With your permission, the IHSB will contract to deploy a Summa canister in a crawl space or basement of your residence. The Summa canister is a 6 liter stainless steel round container that is designed to collect an air sample over a designated time interval such as 8 or 24 hours. The size of a Summa canister resembles a typical basketball. If you grant access, the IHSB and/or its contractor will contact you to conduct a short interview about VOCs that may already be present in your crawl space or basement. The contactor will also schedule a convenient time to deploy the canister and collect it approximately 24 hours later. If insufficient space exists in the substructure for a Summa canister, a smaller passive device may be used instead.

Property Access Authorization & Sampling Permission

Please complete the enclosed Property Access Authorization & Sampling Permission Form and indicate if you "**Yes**, grant" or "**No**, do not grant" authorization and permission to access and collect air samples at your property. Please return the form to me in the enclosed self-addressed and postage-paid envelope by **April 15, 2016**.

The proposed environmental assessment activities described in this letter will be performed at no cost to you. Upon the conclusion of assessment activities, a copy of our findings will be sent to you at the address referenced above. If you have questions regarding the proposed work or need further information, please contact me at george.adams@ncdenr.gov or (704) 663-1699.

Sincerely,

/s/ *George Adams*

Re: **Request for Crawl Space or Basement Air Sampling**
210 Bynum Road
Lincolnton, Lincoln County, North Carolina
NCN000410439

Dear Property Owners:

The Inactive Hazardous Sites Branch (IHSB) of the North Carolina Division of Waste Management (Division) has reviewed Lincoln County tax records that indicate you may own property at the above referenced location. The Division is proposing to oversee environmental assessment activities at select properties along Southfork Road, Southside Road, and Bynum Road in Lincolnton, Lincoln County.

Background

In 1996, the Division of Water Resources (DWR) began a groundwater investigation in the Southside Road neighborhood. Groundwater samples were collected from water-supply wells and analyzed for select Volatile Organic Compounds (VOCs). Dissolved concentrations of tetrachloroethene (PCE) were reported above Federal drinking water standards. Subsequently, Lincoln County Commissioners reduced the connection fees to municipal water at residential properties affected by this contamination. The DWR investigation concluded by May 2000.

In August 2008, the IHSB performed a review of the Division records and offered financial assistance for a municipal connection at select properties with active water-supply wells and previously reported PCE contamination. In May 2009, the Division conducted limited well sampling and forwarded the Site to the United States Environmental Protection Agency (USEPA). In July 2009, the USEPA performed a groundwater sampling event and provided municipal water connections to three residences. In 2015, the Division followed up with additional sampling of water-supply wells.

Purpose & Scope

The purpose of this letter is to solicit your participation in a limited assessment to investigate the structural vapor intrusion potential at the residential structure located at the address above. Reported concentrations of PCE in groundwater in your community exceed the Division's Residential Vapor Intrusion Screening Concentrations, which suggests the potential to affect the indoor air quality within homes in your community.

At the present time, the remedial investigation of hazardous substance discharge remains incomplete and the current configuration of the groundwater plume is not known. Because the source of contamination has not been determined, the IHSB is proposing to collect air samples from residential crawl spaces or basements at select locations with or near previously reported water-supply wells impacted with PCE.

With your permission, the IHSB will contract to deploy a Summa canister in a crawl space or basement of your residence. The Summa canister is a 6 liter stainless steel round container that is designed to collect an air sample over a designated time interval such as 8 or 24 hours. The size of a Summa canister resembles a typical basketball. If you grant access, the IHSB and/or its contractor will contact you to conduct a short interview about VOCs that may already be present in your crawl space or basement. The contactor will also schedule a convenient time to deploy the canister and collect it approximately 24 hours later. If insufficient space exists in the substructure for a Summa canister, a smaller passive device may be used instead.

Property Access Authorization & Sampling Permission

Please complete the enclosed Property Access Authorization & Sampling Permission Form and indicate if you "**Yes**, grant" or "**No**, do not grant" authorization and permission to access and collect air samples at your property. Please return the form to me in the enclosed self-addressed and postage-paid envelope by **April 15, 2016**.

The proposed environmental assessment activities described in this letter will be performed at no cost to you. Upon the conclusion of assessment activities, a copy of our findings will be sent to you at the address referenced above. If you have questions regarding the proposed work or need further information, please contact me at george.adams@ncdenr.gov or (704) 663-1699.

PROPERTY ACCESS AUTHORIZATION & SAMPLING PERMISSION FORM

I am the owner of the property located at _____, and I am authorized to complete this form.

PLEASE CHECK ONE OF THE FOLLOWING

☐ **YES, I grant the Division of Waste Management and/or its contractors permission to access my property and collect samples (as described below) from my property.**

☐ **NO, I do not grant the Division of Waste Management and/or its contractors permission to access my property and collect samples from my property.**

Proposed samples that may be collected from my property include the following:

___ **Potable Well - Does your well have a treatment system? (Yes/No) _____**

___ **Soil**

___ **Groundwater**

_X_ **Other (Include Description) Crawl Space and/or Basement Air Samples**

Analyses: _X_ **VOCs** ___ **SVOCs** ___ **Metals** ___ **Pesticides** ___ **Other**

_____ _____

(Print Name) ***(Telephone Number)***

_____ _____

(Signature) ***(Date)***

Please return a completed form by April 15, 2016 by using the self-addressed and postage-paid envelope and sending it to the address below or by fax to (704) 663-6040.

Re: **Request for Crawl Space or Basement Air Sampling**
1879 Windmill Lane
Lincolnton, Lincoln County, North Carolina
NCN000410439

Dear Property Owner:

The Inactive Hazardous Sites Branch (IHSB) of the North Carolina Division of Waste Management (Division) has reviewed Lincoln County tax records that indicate you may own property at the above referenced location. The Division is proposing to oversee environmental assessment activities at select properties along Southfork Road, Southside Road, and Bynum Road in Lincolnton, Lincoln County.

Background

In 1996, the Division of Water Resources (DWR) began a groundwater investigation in the Southside Road neighborhood. Groundwater samples were collected from water-supply wells and analyzed for select Volatile Organic Compounds (VOCs). Dissolved concentrations of tetrachloroethene (PCE) were reported above Federal drinking water standards. Subsequently, Lincoln County Commissioners reduced the connection fees to municipal water at residential properties affected by this contamination. The DWR investigation concluded by May 2000.

In August 2008, the IHSB performed a review of the Division records and offered financial assistance for a municipal connection at select properties with active water-supply wells and previously reported PCE contamination. In May 2009, the Division conducted limited well sampling and forwarded the Site to the United States Environmental Protection Agency (USEPA). In July 2009, the USEPA performed a groundwater sampling event and provided municipal water connections to three residences. In 2015, the Division followed up with additional sampling of water-supply wells.

Purpose & Scope

The purpose of this letter is to solicit your participation in a limited assessment to investigate the structural vapor intrusion potential at the residential structure located at the address above. Reported concentrations of PCE in groundwater in your community exceed the Division's Residential Vapor Intrusion Screening Concentrations, which suggests the potential to affect the indoor air quality within homes in your community.

At the present time, the remedial investigation of hazardous substance discharge remains incomplete and the current configuration of the groundwater plume is not known. Because the source of contamination has not been determined, the IHSB is proposing to collect air samples from residential crawl spaces or basements at select locations with or near previously reported water-supply wells impacted with PCE.

With your permission, the IHSB will contract to deploy a Summa canister in a crawl space or basement of your residence. The Summa canister is a 6 liter stainless steel round container that is designed to collect an air sample over a designated time interval such as 8 or 24 hours. The size of a Summa canister resembles a typical basketball. If you grant access, the IHSB and/or its contractor will contact you to conduct a short interview about VOCs that may already be present in your crawl space or basement. The contactor will also schedule a convenient time to deploy the canister and collect it approximately 24 hours later. If insufficient space exists in the substructure for a Summa canister, a smaller passive device may be used instead.

Property Access Authorization & Sampling Permission

Please complete the enclosed Property Access Authorization & Sampling Permission Form and indicate if you "**Yes**, grant" or "**No**, do not grant" authorization and permission to access and collect air samples at your property. Please return the form to me in the enclosed self-addressed and postage-paid envelope by **April 15, 2016**.

The proposed environmental assessment activities described in this letter will be performed at no cost to you. Upon the conclusion of assessment activities, a copy of our findings will be sent to you at the address referenced above. If you have questions regarding the proposed work or need further information, please contact me at george.adams@ncdenr.gov or (704) 663-1699.
