 DIVISION OF WASTE MANAGEMENT / SUPERFUND SECTION
 INACTIVE HAZARDOUS SITES BRANCH**

TELEPHONE LOG

DATE: 07/02/08

SHEET: 1 OF 1

Call: Placed _____, Received X , Returned X

PROJECT: Waccamaw Transport	COUNTY: New Hanover
CONVERSATION WITH: Anthony Scarborough John Brown	TELEPHONE: 252-217-5820 704-845-4010
AFFILIATION: GRI, consultant for RP	
DISCUSSION:	
<p>Anthony called to clarify what they needed to do to get the site closed. I told him that I had spoken with my supervisor and we had decided to give them a chance to do a quick assessment of the site. If they were able to submit a work plan for additional soil and groundwater samples within 30 days we would allow them to do it. They needed to review our guidelines, but basically they would need to assess all potential source areas. For example, I would want to see more soil samples from around the concrete engine repair pad. Also since PCE showed up in the groundwater sample they would need to take samples every five feet down to the water table. They should also take another groundwater sample from the area where they found the soil contamination. I wanted to see 8260, 8270 and metals analyses. Because of the metals, the groundwater samples would need to be from permanent monitoring wells and I would highly recommend low flow sampling. He said he understood that because he had encountered that before with nutrients and metals. I told him that if any petroleum compounds were detected, then the site would also be referred to the UST Section. If any contaminants were found above the remedial goals or if the work plan wasn't submitted within the deadline then the site will be added to our list and follow our normal procedures. I reiterated that they needed to review our guidelines and I would be following up with a letter. He said okay.</p> <p>07/03/08, 9:27 a.m. John called to ask about the same things. I told him the same things that I told Anthony. He said okay.</p>
