A. SITE INFORMATION

Under Task Order WE03 of Contract N6270-13-D-8007, the Department of the Navy, Naval Facilities Engineering Command (NAVFAC) Atlantic, tasked Tetra Tech EC, Inc. (TtEC) with performing underground storage tank (UST) removals at Marine Corps Installations East – Marine Corps Base Camp Lejeune (MCIEAST-MCB CAMLEJ). This UST Closure Report was developed to document the removal activities performed at Site AS705.

1. Site Identification

- a. Date of Report: March 20, 2014
- b. Facility ID: 0U-0-0000002740
- c. UST Incident No.: Pending.
- d. Site Name: AS-705
- e. Site Street Address: Building AS-705 Flounder Road
- f. City/State/Zip: Marine Corps Air Station, New River/NC/28540
- g. County: Onslow
- h. Description of Geographical Data Point
Groundwater well nearby UST AS705
- i. Location Method: Handheld global positioning system (GPS)
- j. Latitude: 34.4323516 degrees N
- k. Longitude: -77.255497 degrees W

2. Information about Contacts Associated with the Leaking UST System

- a. UST Property Owner:
Commanding General, MCIEAST-MCB CAMLEJ, G-F/EMD/EQB
12 Post Lane
Camp Lejeune, NC 28547
(910) 451-9017
- b. UST Operator:
MCIEAST – MCB CAMLEJ, G-F/EMD/EQB

c. Property Occupant/Owner Point of Contact:

Ms. Jenni Reed
MCIEAST – MCB CAMLEJ, G-F/EMD/EQB
12 Post Lane
Camp Lejeune, NC 28547
(910) 451-9017

d. Consultant/Contractor:

Tetra Tech EC, Inc.
5250 Challedon Drive
Virginia Beach, Virginia 23462
(757) 518-8491 ext. 136

e. Analytical Laboratory

Accutest Laboratories Southeast, Inc.
4405 Vineland Road, Suite C15
Orlando, Florida 32811
(407) 425-6700
N.C. Certification No. 573

3. Information about Release

- a. Date Discovered: 1/22/2014.
- b. Estimated Quantity of Release:
Unknown.
- c. Not applicable.Cause of Release
Unknown.
- d. Source of Release:
Unknown.
- e. Sizes and contents of UST system from which the release occurred:
Not applicable.

4. Professional Geologist Certification

I, Robert M Sok II, a Professional Geologist for Tetra Tech, do certify that the information contained in this report is correct and accurate to the best of my knowledge and the UST removal was conducted in accordance with good engineering practice and all applicable MCB and North Carolina Department of Environment and Natural Resources (NCDENR) regulations and guidelines.

This page left intentionally blank

B. SITE HISTORY AND CHARACTERIZATION

1. UST Owner and Operator Information

Information about the owner/operator and other responsible party for the UST at AS705 is provided in **Table 1**.

2. UST information

UST AS705 was located adjacent to Building AS-705, Bachelor Officer's Quarters, in the northeast corner of Marine Corps Air Station (MCAS) New River in a relatively isolated area northeast of the airfield. UST AS705 was a 10,000 gallon fiberglass tank that contained #2 fuel oil. The tank had reached its service life and was no longer needed. The site location is shown in **Figure 1**. A site layout showing the former UST location and other pertinent site features is presented in **Figure 2**. Additional information about the UST is provided in **Table 2**.

3. Non-UST information

Site 42 - Building 705 Bachelor Officer's Quarters Dump is located in the northeast corner of MCAS New River and is comprised of approximately 2.8 acres maintained grass with drainage swales and wetlands with dense vegetation. UST AS705 is located on the south-central boundary of Site 42. Site 42 was reportedly used as a dump for landscape and construction debris from 1950 to 1960.

An Initial Assessment Study (IAS) conducted in 1983 by Water and Air Research (WAR) identified several sites (including Site 42) and concluded that there was no specific evidence to suggest the presence of hazardous or toxic substances. Therefore, WAR concluded, no further assessment was required, and Site 42 was closed. In order to assess the accuracy of this conclusion, Site 42 was one of several sites investigated as part of a voluntary confirmatory sampling program to evaluate the potential environmental impacts to soil and groundwater which may have resulted from historical land use practices. Results of the sampling at Site 42 were presented in the Final Confirmatory Sampling Report (CH2M Hill, 2011). As part of the investigation subsurface soil and groundwater samples were collected in addition to performing a Human Health Risk Screening and an Ecological Risk Screening.

Seven subsurface soil samples and three groundwater samples were collected and analyzed for metals, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). For soils, concentrations of VOCs and SVOCs were below North Carolina Soil Screening Levels (SSLs) and adjusted EPA Industrial Soil Regional Screening Levels (RSLs). Benzo(a)pyrene was the only SVOC detected above the EPA Residential Soil RSL (15 µg/kg) with a maximum concentration of 24 µg/kg. Metals were also detected in soil above the screening criteria including aluminum (12,100 mg/kg), arsenic (4.6 mg/kg), chromium (16.9 mg/kg), iron (13,300 mg/kg), and vanadium (66.6 mg/kg). For groundwater, concentrations of VOCs and SVOCs were below the screening values. Metals were detected in ground water above the screening

values including aluminum (8,460 micrograms per liter [$\mu\text{g/L}$]), chromium (10.9 $\mu\text{g/L}$), iron (31,500 $\mu\text{g/L}$), and manganese (1,280 $\mu\text{g/L}$).

The results of the Human Health Risk Screening indicated that there were potential human health risks from exposure to subsurface soil and groundwater at the site. However the individual constituents were reviewed based on the appropriate screening levels and comparison to background ranges and human nutrient requirements and it was concluded that there was no human health risk to site media.

The results of the Ecological Risk Screening indicated that there was no unacceptable risk to ecological receptors from subsurface soil or groundwater.

4. UST Release Descriptions

A previously abandoned 10,000 gallon UST, which was used to for heating oil, was located approximately 100 feet southeast of the current UST on the northeast side of Building AS705. In 1994, as part of the abandonment process, the tank was steam cleaned and filled with concrete slurry. In April 1995 ERC Engineering, Inc. issued a tank closure report, but it is not clear if this report was submitted to NCDENR. During UST closure activities there was no evidence of a petroleum release. Field screening was conducted with a flame ionization detector and all measured readings were less than 10 parts per million (ppm). Soil and groundwater samples were not collected for laboratory analysis (ERC, 1995).

During other work at Building AS705, the abandoned UST was uncovered on August 15, 2011. Osage Environment, Inc. was contacted and an Initial Abatement Action Report was generated (Core Consulting and Osage, 2012). The UST was previously filled to approximately 95% capacity with concrete. There was some residual heating oil located on top of the concrete at the time of this discovery. The residual oil was pumped off and the exposed interior was steam cleaned. The tank could not be removed due to the proximity to building AS705, so the remaining void was filled with concrete and the UST topped with clean fill.

Soil samples were collected around the perimeter of the UST along with the installation of a permanent groundwater monitoring well to investigate whether a petroleum release occurred. The analytical results from the soil samples revealed that only benzo(a)pyrene exceeded the soil to groundwater (STGW) and Residential maximum soil contaminant concentration (MSCCs). There were no other detected VOCs, SVOCs, or Massachusetts Department Environmental Protection (MADEP) compounds which exceeded STGW, Residential or Industrial MSCCs. The groundwater sample was analyzed using EPA 602, EPA 625, and MADEP methods. No compounds were detected above the laboratory detection limits for these methods.

On December 20, 2012, NCDENR issued a letter confirming No Further Action for the AS705 heating oil tank (Incident No. 32754).

5. Brief Description of Site Characteristics

The UST AS705 was located on MCAS New River of MCIEAST-MCB CAMLEJ (**Figure 1**). The site is located in a grassy area with a wooded area and wetlands to the north and west, an asphalt parking lot to the east, and Bachelor Officer's Quarters (Building AS705) to the south.

There are no water supply wells within 1500 feet of the site.

The following sections briefly discuss the site topography and hydrogeologic setting.

Topography

The project area has relatively flat topography that slopes gently to the north. The nearest mapped surface water body is Strawhorn Creek, a small tributary of the New River, located approximately 280 feet north from the UST location.

Regional Geology and Hydrogeology

The site lies within the Tidewater region of Coastal Plain Physiographic Province of North Carolina, where large streams and many of their tributaries are affected by ocean tides. Underlying the site is the Belgrade Formation which is comprised of the Pollocksville member and the Haywood Landing member (Rhodes, 1985). The Pollocksville member is characterized by oyster shell mounds in a sand matrix. The Haywood Landing member is characterized by fossiliferous clayey sand. The predominant soil type at this site is sandy silt to clayey silt of Quaternary surficial deposits. A discontinuous layer of black peaty soil with some sand and partially decayed wood fragments is present within the sandy silt from approximately 2 to 5 feet below ground surface (bgs) along southeast and southwest sidewalls. It is suspected that this material may be part of the landscaping debris disposed of at Site 42 (Building 705 Bachelor Officer's Quarters Dump). The depth to the underlain Tertiary Castle Hayne limestone/sand is unknown, but is estimated to be more than 30 feet.

The nearest mapped surface water body is Strawhorn Creek located approximately 280 feet north of the UST location. Strawhorn Creek flows easterly and discharges into the New River approximately 900 feet to the east of the UST site. Groundwater was encountered at approximately 5 feet bgs and the flow direction in the surficial aquifer is assumed to be to the north towards Strawhorn Creek.

C. UST CLOSURE REPORT (UST-12)

The following section describes the procedures and activities performed in order to complete the UST removal at Site AS705. A site layout showing the former UST location and other pertinent site features is presented in **Figure 2**. Photographs documenting the field activities are included in **Appendix A**.

1. Preparation

A Notification of Intent form (UST-3) to remove the USTs was submitted to NCDENR, Wilmington Regional Office by the MCB Camp Lejeune Environmental Management Division (EMD), and signed on November 25, 2013. A photocopy of the completed UST-3 form is provided in **Appendix B**. Upon completion of the removal, a Site Investigation Report (UST-2) was completed and is included in **Appendix C**.

A pre-construction meeting was held on November 12, 2013 with TtEC, Cape Environmental, EMD, Officer in Charge of Construction (OICC), and Base points of contact. North Carolina 811 was notified in advance of ground penetrating activities to perform a utility locate. In addition, a third party utility locator was subcontracted to perform a utility markout of the area on November 18, 2013.

Cape Environmental was subcontracted to perform UST removal activities using heavy equipment, including a rubber tired backhoe, an excavator, and a dump truck. The initial site preparation activities included:

- Examining the site to determine access to the proposed excavation area
- Delineation of the job site perimeter and work zones
- Location of all utilities within the project area
- Construction of soil and tank staging areas
- Placement of temporary fence/barricades surrounding the work area
- Procurement of required equipment and materials

Residual heating oil was removed from the UST by the Base in advance of UST removal activities. The tank was cleaned on January 7, 2014. A pressure washer was used to clean the tank interior and the residual fuel/water mix was removed using a vacuum truck. The tank was triple-rinsed to ensure removal of residual material.

2. Closure Procedure

UST removal activities began on January 10, 2014, with the removal of product lines. The product lines were previously drained and consisted of a 3/4-inch high density polyethylene (HDPE) supply and return line encased in a 4-inch flexible sleeve. The product lines ran approximately 35 feet from the UST manway, where they were cut from the previously removed portion of piping. On January 14, 2014, the concrete and overburden material was removed. A North Carolina Licensed Professional Geologist (PG) was present to oversee the onsite removal activities. The concrete pad was 12 feet wide by 22 feet long by 8 inches thick. The overburden material was staged adjacent to the excavation area on poly-sheeting with a berm for containment. The top of the tank was encountered approximately 3 feet bgs. Groundwater was encountered at approximately 5 feet bgs.

Air monitoring via MultiRAE 4-gas meter was conducted for screening the overburden material, monitoring the work zone during the excavation process, and determining the oxygen content and lower explosive limit (O₂/LEL) of the tank interior. No visible staining or odors were present during the removal action. Readings inside the tank indicated an inert atmosphere. After determining the tank atmosphere was inert, the UST was removed on January 14, 2014 by Cape Environmental. An excavator was used to remove the tank from the excavation and place the UST on bermed poly-sheeting.

Following removal of the UST from the excavation, the outside of the tank was cleaned of excess soil, and the tank was visually inspected. The inspection did not identify any evidence of petroleum leakage. The brine solution from the UST interstitial was drained and pumped into a holding tank for disposal into the A-47 oil-water separator at Courthouse Bay.

Groundwater was observed at approximately 5 feet below ground surface and no further excavation was completed on the excavation bottom, once the UST was removed.

The initial round of soil confirmation samples was collected on January 14, 2014. A total of 15 soil confirmation samples were collected from the excavation sidewalls and pipe line trench, including 2 duplicates. The sample results indicated contaminated soil was present in four of the ten sidewall samples (AS705-UST-SW06, AS705-UST-SW07, AS705-UST-SW08, and AS705-UST-SW10) which were located along the southeast and southwest sidewalls. The southeast and southwest sidewalls were over-excavated by approximately 3 feet where contamination was found. The second round of confirmation sampling was performed on January 22, 2014 (AS705-UST-SW11, AS705-UST-SW11A, AS705-UST-SW12, AS705-UST-SW13, and AS705-UST-SW14). The results from the second round of soil sampling showed concentrations were below the soil to groundwater screening values and therefore additional excavation was not required. Soil sampling was performed in accordance with NCDENR UST Guidelines. The results of the analyses are discussed in **Section E**. The approximate extent of the final excavation is shown on **Figure 3**.

Due to encountering groundwater in the excavation at 5 feet bgs, soil samples were not collected in the excavation bottom. A monitoring well (AS705-MW01) was installed to collect a groundwater sample in the UST footprint. The monitoring well was installed on February 10, 2014 in accordance with North Carolina Administrative Code (NCAC) Title 15A Subchapter 2C .0108. The monitoring well construction record is provided in **Appendix D** and summarized in **Table 3**. A groundwater sample was collected on February 13, 2014 and shipped to Accutest Laboratories Southeast, Inc. (N.C. Certification No. 573) for analysis. The results of the analysis are discussed in **Section F**.

Following receipt of the soil confirmation sampling results, restoration activities commenced. Restoration in the location of the UST included common soil backfill topped with topsoil. The area was graded to match existing topography.

3. Residual Material

The remaining product within the UST and associated product lines was removed in advance of UST removal activities by the Base. The brine solution was drained from the interstitial space and containerized for disposal into the A-47 oil-water separator at Courthouse Bay. Approximately 75 gallons of brine solution was produced.

Approximately 70 linear feet of product line associated with UST AS705 was removed on January 10, 2014. The product line consisted of a 3/4-inch HDPE supply and return line encased in a 4-inch flexible sleeve. The product lines ran approximately 35 feet from the center of the UST to where the lines were cut from the previously removed piping. The UST was crushed on January 16, 2014 to destroy its integrity, and then disposed of at the ES&J facility located in Autryville, North Carolina. Approximately 4.29 tons of tank material was disposed of. **Appendix E** contains the weight ticket as certification of disposal of the tank.

The excavated soil was sampled and characterized as non-hazardous waste. The material was disposed of as petroleum contaminated soil at the ES&J Enterprises disposal facility. Approximately 62 tons of soil was loaded out for transportation and disposal as part of the AS705 UST removal.

D. INITIAL RESPONSE AND ABATEMENT ACTION

During UST removal activities, no soil staining or the presence of hydrocarbon odor was observed in the UST excavation. In addition, the UST itself showed no evidence of leaking. No free product was present in the excavation. A total of approximately 62 tons of soil were removed during UST removal activities.

Confirmation samples were collected and analyzed in accordance with the NCDENR Guidelines. Confirmation soil sample results indicated exceedances of Total Petroleum Hydrocarbons (TPH)-Diesel Range Organics (DRO) above 10 mg/kg in four of the ten initial soil sample locations. Over-excavation was completed and a second round of confirmation samples was collected and analyzed for VOCs and SVOCs via SW846-8260B, 8270D, 3550C, and MADEP Volatile Petroleum Hydrocarbons (VPH) and Extractable Petroleum Hydrocarbons (EPH). The second round indicated that there were no concentrations above the soil to groundwater MSCCs in the second round samples collected from the sidewalls. Soil confirmation sample results are discussed further in **Section E**.

Since groundwater was encountered at 5 ft bgs in the UST excavation, a monitoring well was installed. A groundwater sample was collected and analyzed in accordance with the NCDENR Guidelines. The groundwater sample results indicated levels of C9-C22 Aromatics and 1-methylnaphthalene above the NCAC 15A 2L .0202 standards.

E. EXCAVATION OF CONTAMINATED SOIL

1. Extent of Soil Contamination

The extent of soil contamination was localized around the AS705 UST on the southeast and southwest side of the excavation, but the source of the contamination cannot definitively be determined. The contamination seems to exist only within a thin localized band of organic rich material at 3 feet bgs. This material is likely from landscaping debris which was known to be disposed of in this area (Site 42) as described in Section B. TPH-DRO was present in the initial round of soil confirmation samples above 10 mg/kg. The sample locations and depths, tank system location, and excavation dimensions are indicated in the following sections of this report.

Soil sampling was conducted in accordance with NC UST guidance and facility guidelines. Soil samples were collected using soil grabbers and sterile disposable trowels. Immediately after collection, the samples were placed into a cooler and preserved on ice. Chain-of-Custody forms were completed for each of the sampling events and custody seals were placed on each cooler. Quality control samples included duplicate samples, trip blanks, matrix spike/matrix spike duplicates (MS/MSD), and temperature blanks.

2. Excavation Process

UST removal activities began on January 10, 2014, with the removal of product lines. Removal of concrete and overburden material was completed on January 14, 2014. A North Carolina Licensed PG was present to oversee the onsite removal activities. The overburden material was staged adjacent to the excavation area on poly-sheeting with a berm for containment.

The UST was removed on January 14, 2014 and staged on bermed poly-sheeting separate from the overburden material. An excavator was used to remove the tank from the excavation. Groundwater was observed at approximately 5 feet below ground surface and no further excavation was completed beyond the water table. Over-excavation of the southeast and southwest sidewalls was conducted after receiving the initial sampling results. After the second round of confirmation sampling, the results indicated there were no exceedances of the soil to groundwater MSCCs. The final excavation dimensions are shown in **Figure 3**. The excavated material was staged in a bermed lined area with poly-sheeting separate from the overburden material.

3. Post-Excavation Confirmation Sampling

Tables 4 and 5 summarize the samples collected, date and time collected, source areas, sampling methods, and analytical results. Following excavation activities, confirmation soil samples were collected from the tank excavation sidewalls and beneath the piping. Sample locations are shown on **Figure 3**. The locations of confirmation samples were mapped using a hand held GPS device and their coordinates are included in **Appendix F**. A sampling matrix, detailed analysis, and

laboratory reports (with photocopies of chains-of-custody) are included in **Appendix G**. Quality control samples for soils included duplicate samples, MS/MSDs, and temperature blanks.

4. Soil Investigation

UST Excavation Samples

On January 14, 2014 during the first round of confirmation sampling, 10 sidewall soil samples were collected (AS705-UST-SW01 through AS705-UST-SW10) from the excavation sidewalls along with 2 duplicate samples (AS705-UST-SW06A and AS705-UST-SW09A) as shown on **Table 4**. The AS705 UST sidewall samples were collected from approximately 4 to 5 feet bgs (groundwater encountered at about 5 feet bgs). No soil samples were collected from the excavation bottom because groundwater was encountered.

After over-excavation, a second round of sidewall soil samples (AS705-UST-SW11 through AS705-UST-SW14) was collected on January 22, 2014. The sample locations were approximately 3 feet from the initial sample locations where results indicated TPH-DRO concentrations greater than 10 mg/kg.

The first round of soil samples were analyzed for TPH-Gasoline Range Organics (GRO), TPH-DRO, and percent solids. The second round of soil samples were analyzed for VOCs (EPA SW846 8260B), SVOCs (EPA SW846 8270D 3550C), MADEP EPH, and MADEP VPH. The analytical results are included in **Table 4**.

Piping Excavation Samples

The initial sampling event included 3 samples (AS705-UST-PL02 through AS705-UST-PL04) collected from beneath the product piping from 2 to 4 feet bgs. These samples were collected on January 14, 2014. No sample was collected from the AS705-PL01 location since its pre-excavation location was within the excavation area. Sample results are included in **Table 4**.

Soil Sample Results

The results of initial round soil samples indicated concentrations ranging from non-detect to 4.55 mg/kg for TPH-GRO and non-detect to 190 mg/kg for TPH-DRO. The soil samples with TPH-DRO concentration above 10 mg/kg were AS705-UST-SW06 (19.6 mg/kg), -SW07 (190 mg/kg), -SW08 (44.5 mg/kg) and -SW10 (19.1 mg/kg). These locations with elevated concentrations were on the southeast and southwest sidewalls (**Figure 3**).

The second round of soil samples was collected and analyzed for VOCs (EPA SW846 8260B), MADEP VPH, MADEP EPH, and SVOCs (EPA 846 8270D & 3550C). Acetone was detected in three samples (AS705-UST -SW11, AS705-UST -SW12, and AS705-UST-SW14) and sec-butylbenzene was detected in one sample (AS705-UST-SW11) with maximum concentrations of 0.58 mg/kg and 0.0011 mg/kg respectively. Benzo(a)pyrene and pyrene were detected at AS705-UST-SW13 at concentrations of 0.0408 and 0.0694 mg/kg. There were no detections for

MADEP VPH or MADEPH EPH. None of these concentrations exceeded the soil to groundwater or residential MSCCs.

5. Disposal of Contaminated Soil

One five-point composite soil sample of the excavated material was collected on January 22, 2014 for disposal characterization analysis. One sample (AS705-UST-SP01) was analyzed for 8260B, TPH-GRO, SVOCs, herbicides, pesticides, metals, polychlorinated biphenyls (PCBs), and TPH-DRO + Resource Conservation and Recovery Act (RCRA) characteristics needed for disposal.

The results of the stockpiled excavation material sample indicated that the material was non-hazardous and suitable for disposal at ES&J Enterprises, Inc., located at 1555 Holland Road, Autryville, NC. The soil was shipped on February 6, 2014. Photocopies of the completed waste transportation and disposal manifests are included in **Appendix H**. The fiberglass UST and piping were purged, cleaned, and disposed of at ES&J Enterprises, Inc. A photo copy of the completed tank disposal manifest is included in **Appendix E**.

F. GROUNDWATER INVESTIGATION

1. Investigative Actions

Groundwater was encountered in the AS705 UST excavation at approximately 5 feet bgs. No free product was observed. A permanent groundwater monitoring well (AS705-MW01) was installed according to Title 15A NCAC 2C within the excavation footprint. Installation was performed on February 10, 2014, and well development was performed on February 11, 2014. On February 13, 2014, the well was sampled using low-flow sampling methods.

Dedicated polyethylene and silicone tubing was used for groundwater sampling. Immediately after collection, the samples were placed into a cooler and preserved on ice. A Chain-of-Custody forms were completed for the sampling events and tamper seal tape was placed on each cooler. Quality control samples included a duplicate sample, trip blanks, a MS/MSD, and temperature blanks.

2. Groundwater Investigation

Groundwater Sampling Information

The permanent well was sampled using a peristaltic pump and field measurements were collected using a Horiba multi-parameter meter. Field measurements were recorded during the purging and included temperature, specific conductivity, dissolved oxygen, oxidation reduction potential, and pH. Monitoring well sampling records are included in **Appendix F**. The groundwater sample was analyzed for EPA 602 with xylenes, MADEP VPH, MADEP EPH, EPA 625, and EDB EPA 504. A trip blank was included as a quality control measure.

Groundwater Investigation Results

The results of the groundwater sample (AS705-MW01) indicated exceedances of the NCAC 15A Subchapter 2L .0202 Groundwater Standards for C9-C10 aromatics (200 µg/L), C11-C22 aromatics (200 µg/L), and 1-methylnaphthalene (1 µg/L). The concentrations observed in groundwater were C9-C10 aromatics at 250 µg/L, C11-C22 aromatics at 367 µg/L, and 1-methylnaphthalene at 5.6 µg/L. The remaining detections were at concentrations below the NCAC 15A 2L .0202 standards. The sample results are summarized in **Table 5** and the laboratory analytical report is included in **Appendix G**.

G. CONCLUSIONS

Between January 10, 2014, and March 3, 2014, one 10,000 gallon UST (AS705), its associated piping, and approximately 62 tons of soil were removed from the Building AS705 area, MCAS New River, North Carolina. The UST previously contained #2 fuel oil. During the removal activities, there was no visual evidence of the tank leaking. However, hydrocarbons were detected in the initial round of confirmation samples from a layer of organic material at approximately 3 feet bgs along the southeast and southwest sidewalls. Over-excavation at locations with TPH-DRO greater than 10 mg/kg was completed and the second round of soil sampling indicated concentrations were below the residential MSCCs.

Groundwater was encountered at 5 feet bgs in the AS705 excavation and sampling was not possible below the UST. A groundwater monitoring well was installed within the footprint of the excavation and sampled. Sample results indicated concentrations of C9-C22 aromatics and 1-methylnaphthalene above the NC 2L standards. However, the concentration of 1-methylnaphthalene (5.6 µg/L) was below the Gross Contaminant Level (GCL) of 1,000 µg/L. A Risk Classification and Land Use Form is included in **Appendix I** which will allow NCDENR to formerly assign a Risk Classification and Land Use designation.

Based on the information provided in this report, it is believed that the intent and requirements of a Limited Site Assessment (LSA) have been met. The site should be considered Low Risk with soil concentrations below the residential MSCCs and GCLs for groundwater. Based on the recent soil and groundwater sampling results, no further action is recommended for soil and a Notice of Residual Petroleum (NRP) and Land Use Restrictions (LUR) is recommended for groundwater as contaminants are present above the NC 2L standards.

APPENDIX B

UST-3 NOTIFICATION OF INTENT: UST PERMANENT CLOSURE

This page left intentionally blank

UST-3 Notice of Intent: UST Permanent Closure or Change-in-Service

Return completed form to:

The DWM Regional Office located in the area where the facility is located. Send a copy to the Central Office in Raleigh so that the status of the tank may be changed to "PERMANENTLY CLOSED" and your tank fee account can be closed out. SEE MAP ON THE BACK OF THIS FORM FOR THE CENTRAL AND REGIONAL OFFICE ADDRESSES.

STATE USE ONLY
I.O. # _____
Date Received _____

INSTRUCTIONS (READ THIS FIRST)

Complete and return at least **thirty (30) days** prior to closure or change-in-service activities. If a Professional Engineer (P.E.) or a Licensed Geologist (L.G.) provides supervision for closure or change-in-service site assessment activities and signs and seals all closure reports then at least a **five (5) working days** notice is acceptable.

Completed UST closure or change-in-service site assessment reports, along with a copy of the UST-2 form, should be submitted to the appropriate Division of Waste Management (DWM) Regional Office within thirty (30) days following closure activities. The UST-2 form should also be submitted to the Central Office in Raleigh so that the status of the tanks may be changed to permanently closed and your tank fee account can be closed out.

UST closure and change-in-service site assessments must be completed in accordance with the latest version of the *Guidelines for Tank Closure*. The *Guidelines for Tank Closure* can be obtained at www.wastenotnc.org.

You must make sure that USTs removed from your property are disposed of properly. When choosing a closure contractor, ask where the tank(s) will be taken for disposal. Usually, USTs are cleaned and cut up for scrap metal. This is dangerous work and must be performed by a qualified company. Tanks disposed of illegally in fields or other dumpsites can leak petroleum products and sludge into the environment. If your tanks are disposed of improperly, you could be held responsible for the cleanup of any environmental damage that occurs.

I. OWNERSHIP OF TANKS

Owner Name (Corporation, Individual, Public Agency, or Other Entity)

Job Title: Environmental Engineer
Phone Number: (910) 451-9017

IV. TANK REMOVAL, CLOSURE IN PLACE, CHANGE-IN SERVICE

- Contact local fire marshal.
- Plan entire closure event.
- Conduct Site Soil Assessment.
- If removing tanks or closing in place, refer to API Publication 2015 *Cleaning Petroleum Storage Tanks* and 1604 *Removal and Disposal of Used Underground Petroleum Storage Tanks*.
- Provide a sketch locating piping, tanks and soil sampling locations.
- Submit a closure report in the format of UST-12 (including the form UST-2) within thirty (30) days following the site investigation.
- If a release from the tanks has occurred, the site assessment portion of the tank closure must be conducted under the supervision of a P.E. or L.G., with all closure site assessment reports bearing the signature and seal of the P.E. or L.G. If a release has not occurred, the supervision, signature or seal of a P.E. or L.G. is not required.
- Keep closure records for three (3) years.

V. WORK TO BE PERFORMED BY

Contractor Name: Tetra Tech EC, Inc.

UST-2 SITE INVESTIGATION REPORT FOR PERMANENT CLOSURE OF UST

This page left intentionally blank

UST-2 Site Investigation Report for Permanent Closure or Change-in-Service of UST

Return completed form to:

The DWM Regional Office located in the area where the facility is located. Send a copy to the Central Office in Raleigh so that the status of the tank may be changed to "PERMANENTLY CLOSED" and your tank fee account can be closed out. SEE MAP ON THE BACK OF THIS FORM FOR THE CENTRAL AND REGIONAL OFFICE ADDRESSES.

STATE USE ONLY:

I.D. # _____

Date Received _____

INSTRUCTIONS (READ THIS FIRST)

For more than five UST systems you may attach additional forms as needed.

Permanent closure – For permanent closure, complete all sections of this form.

Change-in-service – For change-in-service where UST systems will be converted from containing a regulated substance to storing a non-regulated substance, complete sections I, II, III, IV, and VIII

Effective February 1, 1995, all UST closure/change-in-service reports must be submitted in the format provided in the UST-12 form. UST closure and change-in-services must be completed in accordance with the latest version of the *Guidelines for Tank Closure*. A copy of the UST-12 form and the *Guidelines for Tank Closure* can be obtained at www.wastenotnc.org.

You must make sure that USTs removed from your property are disposed of properly. When choosing a closure contractor, ask where the tank(s) will be taken for disposal. Usually, USTs are cleaned and cut up for scrap metal. This is dangerous work and must be performed by a qualified company. Tanks disposed of illegally in fields or other dumpsites can leak petroleum products and sludge into the environment. If your tanks are disposed of improperly, you could be held responsible for the cleanup of any environmental damage that occurs.

NOTE: If a release from the tank(s) has occurred, the site assessment portion of the tank closure must be conducted under the supervision of a P.E. or L.G., with all closure site assessment reports bearing the signature and seal of the P.E. or L.G.

**Re: NC Well Construction and/or Abandonment Record(s)
Sites 1932 and AS705
Jacksonville, North Carolina
CATLIN Project No.: 213159**

To Whom It May Concern:

CATLIN Engineers and Scientists (CATLIN) recently constructed and/or abandoned well(s) at the above referenced site. Attached to this letter are completed North Carolina Well Construction Records and/or North Carolina Well Abandonment Records with associated Attachment(s) for the above referenced sites located in the vicinity of Jacksonville, North Carolina.

If you have any questions or require any additional information, please feel free to contact us at (910) 452-5861.

Sincerely,

A handwritten signature in blue ink, appearing to read "J. Becken", is written over a light blue circular stamp.

Jeffery K. Becken, P.E.
Project Manager

WELL CONSTRUCTION RECORD

This form can be used for single or multiple wells

1. Well Contractor Information:

William J. Miller
Well Contractor Name
2927A AS705-MW01
NC Well Contractor Certification Number Well Identification
CATLIN Engineers and Scientists
Company Name

2. Well Construction Permit #: N/A
List all applicable well permits (i.e., County, State, Variance, Injection, etc.) if known

3. Well use (check well use):

Water Supply Well:	
<input type="checkbox"/> Agricultural	<input type="checkbox"/> Municipal/Public
<input type="checkbox"/> Geothermal (Heating/Cooling Supply)	<input type="checkbox"/> Residential Water Supply (single)
<input type="checkbox"/> Industrial/Commercial	<input type="checkbox"/> Residential Water Supply (shared)
<input type="checkbox"/> Irrigation	
Non-Water Supply Well:	
<input checked="" type="checkbox"/> Monitoring	<input type="checkbox"/> Recovery
Injection Well:	
<input type="checkbox"/> Aquifer Recharge	<input type="checkbox"/> Groundwater Remediation
<input type="checkbox"/> Aquifer Storage and Recovery	<input type="checkbox"/> Salinity Barrier
<input type="checkbox"/> Aquifer Test	<input type="checkbox"/> Stormwater Drainage
<input type="checkbox"/> Experimental Technology	<input type="checkbox"/> Subsidence Control
<input type="checkbox"/> Geothermal (Closed Loop)	<input type="checkbox"/> Tracer
<input type="checkbox"/> Geothermal (Heating/Cooling Return)	<input type="checkbox"/> Other (explain under #4 Remarks)

4. Date Well(s) Completed: 2/10/2014

5a. Well Location:

Building AS705 N/A
Facility/Owner Name Facility ID# (if applicable)

AS-705 BB177, Jacksonville
Physical Address, City, and Zip

Onslow _____
County Parcel Identification No. (PIN)

5b. Latitude and longitude in degrees/minutes/seconds or decimal degrees:
(if well field, one lat/long is sufficient)

34.4323516 N -77.255497 W

6. Is (are) the well(s): Permanent or Temporary

7. Is this a repair to an existing well: Yes or No
If this is a repair, fill out known well construction information and explain the nature of the repair under #21 remarks section or on the back of this form.

8. Number of wells constructed: 1
For multiple injection or non-water supply wells ONLY with the same construction, you can submit one form.

9. Total well depth below land surface: 14 (ft.)
For multiple wells list all depths if different (example - 3@200' and 2@100')

10. Static water level below top of casing: 4.3 (ft.)
If water level is above use "+"

11. Borehole diameter: 8.25 (in.)

12. Well construction method: H.S.A.
(i.e. auger, rotary, cable, direct push, etc.)

FOR WATER SUPPLY WELLS ONLY:	
13a. Yield (gpm): _____	Method of test: _____
13b. Disinfection type: _____	Amount: _____

For Internal Use ONLY:

21. REMARKS					
SEE ATTACHED					

22. Certification:
Signature of Certified Well Contractor _____ Date 2-28-14

By signing this form I hereby certify that the well(s) was (were) constructed in accordance with 15A NCAC 02C .0100 or 2C Well Construction Standards and that a copy of this record has been provided to the well owner.

23. Site diagram or additional well details:
You may use the back of this page to provide additional well site details or well construction details. You may also attach additional pages if necessary.

SUBMITTAL INSTRUCTIONS
24a. For All Wells: Submit this form within 30 days of completion of well construction to the following:
Division of Water Resources, Information Processing Unit,
1617 Mail Service Center, Raleigh, NC 27699-1617
24b. For Injection Wells: In addition to sending the form to the address in 24a above, also submit one copy of this form within 30 days of completion of well construction to the following:
Division of Water Resources, Underground Injection Control Program,
1636 Mail Service Center, Raleigh, NC 27699-1636

24c. For Water Supply & Injection Wells:
Also submit one copy of this form within 30 days of completion of well construction to the county health department of the county where constructed.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech EC, Inc

Job No: FA11639

Site: WE03, Camp Lejuene, NC

Report Date 1/20/2014 10:23:07 AM

15 Samples were collected on 01/14/2014 and were received at Accutest SE on 01/15/2014 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of FA11639. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GC By Method SW846 8015C

Matrix: SO **Batch ID:** GUV3311

All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11622-3MS, FA11622-3MSD were used as the QC samples indicated.

Matrix: SO **Batch ID:** GUV3312

All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11639-3MS, FA11639-3MSD were used as the QC samples indicated.

Matrix: SO **Batch ID:** GUV3313

All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11639-6MS was used as the QC samples indicated.
GUV3313-BS: No MSD available for this run.

Extractables by GC By Method SW846 8015C

Matrix: SO **Batch ID:** OP50094

All samples were extracted within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11639-6MS, FA11639-6MSD were used as the QC samples indicated.
FA11639-11 for TPH (C10-C28): Petroleum hydrocarbon pattern extends beyond C28.
FA11639-12 for TPH (C10-C28): Petroleum hydrocarbon pattern extends beyond C28.
FA11639-15 for TPH (C10-C28): Petroleum hydrocarbon pattern extends beyond C28.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN59727

Sample(s) FA11639-6DUP was used as the QC samples for Solids, Percent.

Matrix: SO **Batch ID:** GN59729

Sample(s) FA11639-8DUP, FA11639-9DUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech EC, Inc

Job No: FA11903

Site: WE03, Camp Lejeune, NC

Report Date 1/31/2014 12:54:46 PM

6 Samples were collected on 01/22/2014 and were received at Accutest SE on 01/23/2014 properly preserved, at 2.4 Deg. C and intact. These Samples received an Accutest job number of FA11903. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: LEACHATE

Batch ID: OP50243

All samples were analyzed within the recommended method holding time.

Sample(s) FA11858-1MS, FA11858-1MSD, FA11815-1LDUP were used as the QC samples indicated.

Sample(s) FA11903-6L has compound(s) reported with a "B" qualifier, indicating analyte is found in the associated method blank.

Matrix: SO

Batch ID: VF2056

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11811-1MS, FA11811-1MSD were used as the QC samples indicated.

Sample(s) FA11811-1MS, FA11811-1MSD have surrogates outside control limits. Probable cause is due matrix interference.

Matrix: SO

Batch ID: VH3177

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11903-4MS, FA11903-4MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 2,2-Dichloropropane, Acetone, cis-1,3-Dichloropropene, Ethyl tert-Butyl Ether, m-Dichlorobenzene, Methyl Tert Butyl Ether, n-Butylbenzene, Naphthalene, o-Dichlorobenzene, p-Dichlorobenzene, p-Isopropyltoluene, sec-Butylbenzene, tert-Butylbenzene, Vinyl Acetate are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Duplicate Recovery(s) for 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 2,2-Dichloropropane, Acetone, Bromoform, cis-1,3-Dichloropropene, Ethyl alcohol, Ethyl tert-Butyl Ether, Methyl Tert Butyl Ether, Naphthalene, Vinyl Acetate are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for Ethyl alcohol, Vinyl Acetate are outside control limits for sample FA11903-4MSD. Probable cause is due to sample non-homogeneity.

FA11903-2: Sample was prepared from a bulk container.

FA11903-3: Sample was prepared from a bulk container.

FA11903-4: Sample was prepared from a bulk container.

FA11903-5: Sample was prepared from a bulk container.

Extractables by GCMS By Method SW846 8270D

Matrix: LEACHATE

Batch ID: OP50270

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11903-6LMS, FA11903-6LMSD were used as the QC samples indicated.

Matrix: SO

Batch ID: OP50214

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11903-4MS, FA11903-4MSD were used as the QC samples indicated.

Sample(s) OP50214-MB has surrogates outside control limits.

OP50214-MB for Terphenyl-d14: Outside control limits.

Friday, January 31, 2014

Page 1 of 3

Volatiles by GC By Method MADEP VPH REV 1.1

Matrix: SO **Batch ID:** GUU313

All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11903-4DUP was used as the QC samples indicated.
Sample(s) FA11903-1 has surrogates outside control limits. Probable cause is due to matrix interference.
FA11903-1 for BFB: Outside control limits due to moisture content.

Volatiles by GC By Method SW846 8015C

Matrix: SO **Batch ID:** GUV3319

All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11903-6MS, FA11903-6MSD were used as the QC samples indicated.

Extractables by GC By Method MADEP EPH REV 1.1

Matrix: SO **Batch ID:** OP50239

All samples were extracted within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11903-4DUP was used as the QC samples indicated.

Extractables by GC By Method SW846 8015C

Matrix: SO **Batch ID:** OP50225

All samples were extracted within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11877-8MS, FA11877-8MSD were used as the QC samples indicated.

Extractables by GC By Method SW846 8081B

Matrix: LEACHATE **Batch ID:** OP50271

All samples were extracted within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11903-6LMS, FA11903-6LMSD were used as the QC samples indicated.

Extractables by GC By Method SW846 8082A

Matrix: SO **Batch ID:** OP50229

All samples were extracted within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11903-6MS, FA11903-6MSD were used as the QC samples indicated.
RPD(s) for MSD for Aroclor 1016 are outside control limits for sample OP50229-MSD. Probable cause is due to sample non-homogeneity.

Extractables by GC By Method SW846 8151A

Matrix: LEACHATE **Batch ID:** OP50262

All samples were extracted within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) FA11820-2LLS, FA11820-7LDUP, FA11903-6LMS, FA11903-6LMSD were used as the QC samples indicated.

Metals By Method SW846 6010C

Matrix: LEACHATE **Batch ID:** MP26742

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

Sample(s) FA11903-6LDUP, FA11987-1LMS, FA11987-1LMSD, FA11987-1LSL were used as the QC samples for metals.

RPD(s) for Duplicate for Barium, Selenium are outside control limits for sample MP26742-D2. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic, Cadmium, Selenium are outside control limits for sample MP26742-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP26742-MB2 for Lead: Possible positive bias, but all sample results < DL.

Metals By Method SW846 7470A

Matrix: LEACHATE **Batch ID:** MP26735

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11903-6LDUP, FA11987-1LMS, FA11987-1LMSD, FA11987-1LSL were used as the QC samples for metals.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN59878

Sample(s) FA11840-1DUP was used as the QC samples for Solids, Percent.

Matrix: SO **Batch ID:** GN59905

Sample(s) FA11903-4DUP, FA11903-5DUP were used as the QC samples for Solids, Percent.

Wet Chemistry By Method SW846 1010

Matrix: SO **Batch ID:** GN59910

Sample(s) FA11987-1DUP was used as the QC samples for Ignitability (Flashpoint).

FA11903-6 for Ignitability (Flashpoint): Not ignitable.

Wet Chemistry By Method SW846 CHAP7

Matrix: SO **Batch ID:** GN59921

Sample(s) FA11636-1DUP was used as the QC samples for Corrosivity as pH.

Matrix: SO **Batch ID:** GP23352

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11820-7DUP was used as the QC samples for Sulfide Reactivity.

Matrix: SO **Batch ID:** GP23353

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA11820-7DUP was used as the QC samples for Cyanide Reactivity.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

Custody Documents and Other Forms

Includes the following where applicable:

- Chain of Custody

ACCUTEST LABORATORIES SAMPLE RECEIPT CONFIRMATION

ACCUTEST'S JOB NUMBER: FA11903 CLIENT: Tetra Tech PROJECT: UST Demo Camp Lejeune
 DATE/TIME RECEIVED: 01-23-14 930 (MM/DD/YY 24:00) NUMBER OF COOLERS RECEIVED: 1
 METHOD OF DELIVERY: FEDEX UPS ACCUTEST COURIER GREYHOUND DELIVERY OTHER
 AIRBILL NUMBERS: 8047 2600 5010

COOLER INFORMATION

- CUSTODY SEAL NOT PRESENT OR NOT INTACT
- CHAIN OF CUSTODY NOT RECEIVED (COC)
- ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- TEMPERATURE CRITERIA NOT MET
- WET ICE PRESENT

TRIP BLANK INFORMATION

- TRIP BLANK PROVIDED
- TRIP BLANK NOT PROVIDED
- TRIP BLANK NOT ON COC
- TRIP BLANK INTACT
- TRIP BLANK NOT INTACT
- RECEIVED WATER TRIP BLANK
- RECEIVED SOIL TRIP BLANK

MISC. INFORMATION

NUMBER OF ENCORES? 25-GRAM 5-GRAM
 NUMBER OF 5035 FIELD KITS? 8
 NUMBER OF LAB FILTERED METALS? _____

TEMPERATURE INFORMATION

IR THERM ID 1 CORR. FACTOR -0.4
 OBSERVED TEMPS: 2.8
 CORRECTED TEMPS: 2.4

SAMPLE INFORMATION

- SAMPLE LABELS PRESENT ON ALL BOTTLES
- INCORRECT NUMBER OF CONTAINERS USED
- SAMPLE RECEIVED IMPROPERLY PRESERVED
- INSUFFICIENT VOLUME FOR ANALYSIS
- DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- ID'S ON COC DO NOT MATCH LABEL
- VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- SAMPLE CONTAINER(S) RECEIVED BROKEN
- % SOLIDS JAR NOT RECEIVED
- 5035 FIELD KIT FROZEN WITHIN 48 HOUR'S
- RESIDUAL CHLORINE PRESENT

(APPLICABLE TO EPA 600 SERIES OR NORTH CAROLINA ORGANICS)

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Tetra Tech EC, Inc

Job No: FA12480

Site: WE03, Camp Lejuene, NC

Report Date 2/24/2014 8:32:37 PM

1 Sample and 1 Trip Blank were collected on 02/13/2014 and were received at Accutest SE on 02/14/2014 properly preserved, at 2.4 Deg. C and intact. These Samples received an Accutest job number of FA12480. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method EPA 625

Matrix: AQ

Batch ID: OP50554

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA12584-1MS, FA12584-1MSD were used as the QC samples indicated.

Matrix Spike / Matrix Spike Duplicate Recovery(s) for 4,6-Dinitro-o-cresol, 4-Nitrophenol, Benzoic Acid, Di-n-octyl phthalate are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike

OP50554-MS: Dilution required due to matrix interference.

OP50554-MSD: Dilution required due to matrix interference.

Volatiles by GC By Method EPA 504.1

Matrix: AQ

Batch ID: OP50494

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA12480-1MS, FA12480-1MSD were used as the QC samples indicated.

Volatiles by GC By Method EPA 602

Matrix: AQ

Batch ID: GEF6137

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA12480-1MS, FA12480-1MSD were used as the QC samples indicated.

Matrix Spike / Matrix Spike Duplicate Recovery(s) for 1,2-Dichlorobenzene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Volatiles by GC By Method MADEP VPH REV 1.1

Matrix: AQ

Batch ID: GUV3347

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA12480-1DUP was used as the QC samples indicated.

Extractables by GC By Method MADEP EPH REV 1.1

Matrix: AQ

Batch ID: OP50527

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA12480-1DUP was used as the QC samples indicated.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

Parameter Certification Exceptions

Job Number: FA12480
Account: TETRCAI Tetra Tech EC, Inc
Project: WE03, Camp Lejuene, NC

The following parameters included in this report are exceptions to DOD certification. The certification status of each is indicated below.

Parameter	CAS#	Method	Mat	Certification Status
Acenaphthene	83-32-9	EPA 625	AQ	Accutest is not certified for this parameter.
Acenaphthylene	208-96-8	EPA 625	AQ	Accutest is not certified for this parameter.
Anthracene	120-12-7	EPA 625	AQ	Accutest is not certified for this parameter.
4-Bromophenyl phenyl ether	101-55-3	EPA 625	AQ	Accutest is not certified for this parameter.
Benzo(a)anthracene	56-55-3	EPA 625	AQ	Accutest is not certified for this parameter.
Benzo(a)pyrene	50-32-8	EPA 625	AQ	Accutest is not certified for this parameter.
Benzo(b)fluoranthene	205-99-2	EPA 625	AQ	Accutest is not certified for this parameter.
Benzo(g,h,i)perylene	191-24-2	EPA 625	AQ	Accutest is not certified for this parameter.
Benzo(k)fluoranthene	207-08-9	EPA 625	AQ	Accutest is not certified for this parameter.
Benzoic Acid	65-85-0	EPA 625	AQ	Accutest is not certified for this parameter.
Benzyl Alcohol	100-51-6	EPA 625	AQ	Accutest is not certified for this parameter.
Butyl benzyl phthalate	85-68-7	EPA 625	AQ	Accutest is not certified for this parameter.
2-Chloronaphthalene	91-58-7	EPA 625	AQ	Accutest is not certified for this parameter.
2-Chlorophenol	95-57-8	EPA 625	AQ	Accutest is not certified for this parameter.
4-Chloro-3-methyl phenol	59-50-7	EPA 625	AQ	Accutest is not certified for this parameter.
4-Chloroaniline	106-47-8	EPA 625	AQ	Accutest is not certified for this parameter.
4-Chlorophenyl phenyl ether	7005-72-3	EPA 625	AQ	Accutest is not certified for this parameter.
Chrysene	218-01-9	EPA 625	AQ	Accutest is not certified for this parameter.
bis(2-Chloroethoxy)methane	111-91-1	EPA 625	AQ	Accutest is not certified for this parameter.
bis(2-Chloroethyl)ether	111-44-4	EPA 625	AQ	Accutest is not certified for this parameter.
bis(2-Chloroisopropyl)ether	108-60-1	EPA 625	AQ	Accutest is not certified for this parameter.
1,2-Dichlorobenzene	95-50-1	EPA 625	AQ	Accutest is not certified for this parameter.
1,2-Diphenylhydrazine	122-66-7	EPA 625	AQ	Accutest is not certified for this parameter.
1,3-Dichlorobenzene	541-73-1	EPA 625	AQ	Accutest is not certified for this parameter.
1,4-Dichlorobenzene	106-46-7	EPA 625	AQ	Accutest is not certified for this parameter.
2,4-Dichlorophenol	120-83-2	EPA 625	AQ	Accutest is not certified for this parameter.
2,4-Dimethylphenol	105-67-9	EPA 625	AQ	Accutest is not certified for this parameter.
2,4-Dinitrophenol	51-28-5	EPA 625	AQ	Accutest is not certified for this parameter.
3,3'-Dichlorobenzidine	91-94-1	EPA 625	AQ	Accutest is not certified for this parameter.
4,6-Dinitro-o-cresol	534-52-1	EPA 625	AQ	Accutest is not certified for this parameter.
Di-n-butyl phthalate	84-74-2	EPA 625	AQ	Accutest is not certified for this parameter.
Di-n-octyl phthalate	117-84-0	EPA 625	AQ	Accutest is not certified for this parameter.
Dibenzo(a,h)anthracene	53-70-3	EPA 625	AQ	Accutest is not certified for this parameter.
Dibenzofuran	132-64-9	EPA 625	AQ	Accutest is not certified for this parameter.
Diethyl phthalate	84-66-2	EPA 625	AQ	Accutest is not certified for this parameter.
Dimethyl phthalate	131-11-3	EPA 625	AQ	Accutest is not certified for this parameter.
bis(2-Ethylhexyl)phthalate	117-81-7	EPA 625	AQ	Accutest is not certified for this parameter.
Fluoranthene	206-44-0	EPA 625	AQ	Accutest is not certified for this parameter.
Fluorene	86-73-7	EPA 625	AQ	Accutest is not certified for this parameter.
Hexachlorobenzene	118-74-1	EPA 625	AQ	Accutest is not certified for this parameter.
Hexachlorobutadiene	87-68-3	EPA 625	AQ	Accutest is not certified for this parameter.
Hexachlorocyclopentadiene	77-47-4	EPA 625	AQ	Accutest is not certified for this parameter.

Parameter Certification Exceptions

Job Number: FA12480
Account: TETRCAI Tetra Tech EC, Inc
Project: WE03, Camp Lejuene, NC

The following parameters included in this report are exceptions to DOD certification.
The certification status of each is indicated below.

Parameter	CAS#	Method	Mat	Certification Status
Hexachloroethane	67-72-1	EPA 625	AQ	Accutest is not certified for this parameter.
Indeno(1,2,3-cd)pyrene	193-39-5	EPA 625	AQ	Accutest is not certified for this parameter.
Isophorone	78-59-1	EPA 625	AQ	Accutest is not certified for this parameter.
1-Methylnaphthalene	90-12-0	EPA 625	AQ	Accutest is not certified for this parameter.
2-Methylnaphthalene	91-57-6	EPA 625	AQ	Accutest is not certified for this parameter.
2-Methylphenol	95-48-7	EPA 625	AQ	Accutest is not certified for this parameter.
3&4-Methylphenol		EPA 625	AQ	Accutest is not certified for this parameter.
2-Nitrophenol	88-75-5	EPA 625	AQ	Accutest is not certified for this parameter.
4-Nitrophenol	100-02-7	EPA 625	AQ	Accutest is not certified for this parameter.
N-Nitroso-di-n-propylamine	621-64-7	EPA 625	AQ	Accutest is not certified for this parameter.
N-Nitrosodiphenylamine	86-30-6	EPA 625	AQ	Accutest is not certified for this parameter.
Naphthalene	91-20-3	EPA 625	AQ	Accutest is not certified for this parameter.
Nitrobenzene	98-95-3	EPA 625	AQ	Accutest is not certified for this parameter.
Pentachlorophenol	87-86-5	EPA 625	AQ	Accutest is not certified for this parameter.
Phenanthrene	85-01-8	EPA 625	AQ	Accutest is not certified for this parameter.
Phenol	108-95-2	EPA 625	AQ	Accutest is not certified for this parameter.
Pyrene	129-00-0	EPA 625	AQ	Accutest is not certified for this parameter.
1,2,4-Trichlorobenzene	120-82-1	EPA 625	AQ	Accutest is not certified for this parameter.
2,4,6-Trichlorophenol	88-06-2	EPA 625	AQ	Accutest is not certified for this parameter.
Benzene	71-43-2	EPA 602	AQ	Accutest is not certified for this parameter.
Chlorobenzene	108-90-7	EPA 602	AQ	Accutest is not certified for this parameter.
1,2-Dibromoethane	106-93-4	EPA 504.1	AQ	Accutest is not certified for this parameter.
1,2-Dichlorobenzene	95-50-1	EPA 602	AQ	Accutest is not certified for this parameter.
1,3-Dichlorobenzene	541-73-1	EPA 602	AQ	Accutest is not certified for this parameter.
1,4-Dichlorobenzene	106-46-7	EPA 602	AQ	Accutest is not certified for this parameter.
Ethylbenzene	100-41-4	EPA 602	AQ	Accutest is not certified for this parameter.
Toluene	108-88-3	EPA 602	AQ	Accutest is not certified for this parameter.
Xylenes (total)	1330-20-7	EPA 602	AQ	Accutest is not certified for this parameter.

APPENDIX I
RISK CLASSIFICATION AND LAND USE FORM

This page left intentionally blank

Limited Site Assessment Risk Classification and Land Use Form

Part I – Groundwater/Surface Water/Vapor Impacts

High Risk

1. Has the release contaminated any water supply well including any well used for non-drinking purposes? YES/**NO**
2. Is a water supply well used for drinking water located within 1,000 feet of the source area of the release? YES/**NO**
3. Is a water supply well not used for drinking water (e.g., irrigation, washing cars, industrial cooling water, filling swimming pools) located within 250 feet of the source area of the release? YES/**NO**
4. Does groundwater within 500 feet of the source area of the release have the potential for future use (there is no other source of water supply other than the groundwater)? YES/**NO**
5. Do vapors from the release pose a threat of explosion because of accumulation of the vapors in a confined space or pose any other serious threat to public health, public safety or the environment? YES/**NO**
If yes, describe.

6. Are there any other factors that would cause the release to pose an imminent danger to public health, public safety, or the environment? YES/**NO**
If yes, describe.

Intermediate Risk

7. Is a surface water body located within 500 feet of the source area of the release? **YES**/NO

Strawhorn Creek is located approximately 280 feet north. The creek flows east and discharges into the New River approximately 900 feet east of UST AS705.

If **YES**, does the maximum groundwater contaminant concentration exceed the surface water quality standards and criteria found in 15A NCAC 2B .0200 by a factor of 10? YES/**NO**
8. Is the source area of the release located within an approved or planned wellhead protection area as defined in 42 USC 300h-7(e)? YES/**NO**
If yes, describe.

9. Is the release located in the Coastal Plain physiographic region as designated on a map entitled “Geology of North Carolina” published by the Department in 1985? **YES**/NO

If **YES**, is the source area of the release located in an area in which there is recharge to an unconfined or semi-confined deeper aquifer that is being used or may be used as a source of drinking water? If YES, describe. **YES/NO**

The potential source area is located just above the unconfined surficial aquifer. However, the surficial aquifer is not used for the potable water supply at MCB Camp Lejeune. The deeper Castle Hayne aquifer is the water source for potable water treatment facilities.

10. Do the levels of groundwater contamination for any contaminant exceed the gross contamination levels (See Table 2.) established by the Department? **YES/NO**

Part II - Land Use

Property Containing Source Area of Release

The questions below pertain to the property containing the source area of the release.

1. Does the property contain one or more primary or secondary residences (permanent or temporary)? Describe. **YES/NO**

Building 705, which is about 60 feet south of source area, is used for temporary bachelor officers quarters. Other barracks are located further south and the Officers Club is about 700 feet further east.

2. Does the property contain a school, daycare center, hospital, playground, park, recreation area, church, nursing home, or other place of public assembly? Describe. **YES/NO**

The Officers Club could be considered a place of assembly for base personnel and guests at MCB Camp Lejeune. However, no school, daycare, park, or place of public assembly is within 2,000 feet of the site.

3. Does the property contain a commercial (e.g., retail, warehouse, office/business space, etc.) or industrial (e.g., manufacturing, utilities, industrial research and development, chemical/petroleum bulk storage, etc.) enterprise, an inactive commercial or industrial enterprise, or is the land undeveloped? Describe. **YES/NO**

No commercial or industrial activity in the area.

4. Do children visit the property? Explain. **YES/NO**

Although it could be possible for a child to visit the property, it can be assumed this would not be a regular place for a child to visit.

Is access to the property reliably restricted consistent with its use (e.g., by fences, security personnel or both)? Explain. **YES/NO**

The site is located on MCAS New River which restricts access to base personnel and their families. However, there are no other restrictions to access the site area.

5. Does pavement, buildings, or other structures cap the contaminated soil? YES/**NO**

Describe. Only grass and wooded areas to the north and west, paved parking lot to the east, but sampling indicated the eastern extent of contaminated soil did not reach the parking lot.

If yes, what mechanisms are in place or can be put into place to ensure that the contaminated soil will remain capped in the foreseeable future?

6. What is the zoning status of the property?

MCAS New River is not subject to county zoning requirements.

7. Is the use of the property likely to change in the next 20 years? Explain. YES/**NO**

The current use of the MCAS area is not likely to change in the near future.

Property Surrounding Source Area of Release

The questions below pertain to the area within 1,500 feet of the source area of the release (excludes property containing source area of the release):

1. What is the distance from the source area of the release to the **nearest** primary or secondary residence (permanent or temporary)?

Building AS705, bachelors quarters is about 50 feet to the south.

2. What is the distance from the source area of the release to the **nearest** school, daycare center, hospital, playground, park, recreation area, church, nursing home or other place of public assembly?

> 1,500 feet.

3. What is the zoning status of properties in the surrounding area?

MCAS New River is not subject to county zoning requirements.

4. Briefly characterize the use and activities of the land in the surrounding area.

As mentioned above, the site is adjacent to the bachelors quarters (AS705).
