Jim, I received your message, I am at home with some back trouble, but trying to work also. The 15-20 date will be fine. I think we have the info we need and I will get you an approval letter this week. Basically it will state to follow the plan, if the cap is disturbed put it back in accordance with the specs in the approved closure plan, all garbage must be disposed of at a permitted facility. I do have a concern about the gas lines being on top of the cap/ground, but seeing as how we are beginning to warm up and you need to get gas samples I think it will work. If a project is developed then the lines should be protected/buried, and if one is not then they should be removed.

Also, you and the county should get with us and Jim Patterson so that we are all on the same page as to where at the facility we might be able to put the other infrastructure, buildings etc. That will be an issue given the gas migration and groundwater contamination. I'll be in touch
 Ed Musser
