Attention: Mr. Edward F. Mussler, III, P.E.

Subject: Duke Energy – Marshall Steam Station
Industrial Landfill #1
Landfill Permit Application
Site Suitability Report (Vol. 1 & 2) Submittal

Dear Mr. Mussler:

Attached is the Site Suitability Report as prepared by Duke Energy's consultant, S&ME, Inc., for the proposed combustion products landfill at Duke's Marshall Steam Station in Terrell, N.C. Enclosed is one copy (bound Volumes 1 and 2) of the application. An electronic copy of the application is enclosed in the Appendix of each Volume. The same information is being submitted directly to Mr. Larry Frost at the Asheville Regional Office. Volume 1 contains requirements and responses to 15A NCAC 13B, Sections .0503(1) and .0504(1), while Volume 2 contains the hydrogeological study information for the proposed site. If additional paper or electronic copies are needed, please let me know.

To assist with review of the report and this project, Duke Energy will be happy to arrange a visit to the Marshall Steam Station site or meet with you as needed at your convenience.

If there are any questions or if additional information is needed, please contact me at 980-373-7892. We look forward to continue working with you on this project.

Sincerely,

Christopher D. Hallman, P.E.

S&ME Project No.1411-07-103

Dear Mr. Hallman:

S&ME, Inc. (S&ME) is pleased to submit this Marshall Steam Station Industrial Landfill #1 Site Suitability Report. This report contains the information required by the North Carolina Department of Environment and Natural Resources Division of Waste Management as part of an application to construct and operate a landfill. More specifically, the information in this report provides the information required by North Carolina Administrative Code Title 15A NCAC 13B .0503(1) and .0504(1). Volume 1 of this report contains the requirements and responses to the referenced regulations and Volume 2 contains the results of the geologic and hydrologic studies required by these regulations.

As requested by Duke, we have provided five copies of this report and a CD containing with an electronic version of the report.

S&ME appreciates the opportunity to provide you with our services. Should you have any questions regarding the information presented in this report, or if we may be of further assistance to you, please contact us at your convenience.

Sincerely,

S&ME, Inc.

William M. Miller
Senior Project Engineer

1.0 INTRODUCTION

In an effort to meet ongoing needs for on-site combustion product disposal, Duke Energy submits this Site Suitability Report for an industrial landfill to be constructed on Duke Energy property at the Marshall Steam Station (MSS) in Terrell, Catawba County, North Carolina. The proposed landfill site is shown on the attached Drawing 1, *Site Topographic Map* and Drawing 2, *Site Aerial Photograph*.

2.0 DESCRIPTION OF PLANT AND LANDFILL SITE

Marshall Steam Station is located in Catawba County, on Highway NC 150, just west of Lake Norman. The Marshall plant generates 2090 MW of electric power by combustion of coal. Marshall is the second largest coal facility owned by Duke Energy. The Marshall station generates enough electricity to power over one and a half a million homes.

The plant is located in the Piedmont physiographic region. Drawing 1 shows the location of the plant and the location of the proposed Industrial Landfill #1. The area encompassed by the limit of waste for the completed landfill contains an area of approximately 93.4 acres. The area encompassed by the limit of waste for the initial phase, Phase 1, is approximately 38 acres.

The Industrial Landfill #1 will be located on Duke Energy property, northwest of the Marshall plant. The landfill is located south of Island Ford Road and in the northern portion of the drainage basin for the Marshall Ash Basin. The proposed landfill footprint will extend over a portion of area that was formerly part of the Marshall Ash Basin and a portion of the area permitted to receive asbestos.

As described in the site hydrogeological study (Hydrogeological Study Industrial Landfill #1, Duke Energy – Marshall Steam Station, Terrell, North Carolina, S&ME Project No: 1411-07-103, March 10, 2008), the subsurface conditions in the landfill area consist of residual soils and partially weathered rock which have been formed by the in-place weathering of the parent rock. The ground surface in the area of the landfill slopes from the elevation along Island Point Road, approximate elevation 880 feet to 890 feet, towards the Marshall Ash Basin, at an elevation of approximately 825 feet.

3.0 DESCRIPTION OF INDUSTRIAL LANDFILL #1

The Industrial Landfill #1 will be located on Duke Energy property, northwest of the Marshall plant and to the north of the Marshall Ash Basin. The material will be conveyed to the landfill site by truck, where the material will be spread and compacted. The landfill will begin receiving waste generated at Marshall in the fall of 2009.

3.1 WASTE TYPES AND VOLUMES

The landfill would be permitted to contain a variety of combustion product wastes generated at the Marshall Steam Station. These wastes would be primarily fly ash, generated from combustion of coal. Duke has requested that the following wastes be permitted for disposal in the landfill:

- Fly ash and bottom ash
- Gypsum
- Clarifier Sludge from the FGD process
- Asbestos Material
- Land Clearing and Inert Debris
- Coal Mill Rejects, Waste Limestone Material, Boiler Slag

The estimated unit weights and estimated annual disposal volumes are provided in the following table.

Table 1- Approximate Units Weights and Annual Disposal Volumes

Waste	Unit Weight (lb/ft³)	Unit Weight (ton/yd³)	Annual Quantity Placed in Landfill (tons)	Annual Volume (yd³)
Fly Ash and Bottom Ash	72	0.97	600,000	618,600
Off Spec Gypsum	89	1.20	30,000	24,970
Clarifier Sludge	44	0.59	50,000	84,700
Asbestos Material	-	0.21	1050	5,000
Land Clearing and Inert Debris	70	0.95	1000	1053
Coal Mill rejects, Waste Limestone Material, Boiler Slag	60	0.81	3,000	3,700
Total Annual Volume				738,000

3.2 GENERAL DESCRIPTION OF LANDFILL SITE AND DESIGN

The area encompassed by the limit of waste for the completed landfill contains an area of approximately 93.4 acres. The area encompassed by the limit of waste for the initial phase, Phase 1 is approximately 38 acres.

The proposed landfill will be constructed on undisturbed land, on an area that was formerly part of the Marshall Ash Basin², and on an area that was permitted to receive asbestos waste. The area that was formerly part of the Ash Basin consists of area where ash has been sluiced and areas of free standing water. The area permitted to receive asbestos waste is part of the 38.1 acre portion of land permitted under Solid Waste Permit #18-04.

The landfill will be designed to meet the requirements of the Solid Waste Management Act 2007, Section 7.(b) and will be designed with a lower liner consisting of three components. The upper two components will consist of two separate flexible membrane liners, with a leak detection system between the two liners. The third component shall consist of a minimum of two feet of soil underneath the bottom of those liners, with the soil having a maximum permeability of 1×10^{-7} centimeters per second, or an approved alternative liner system. Specific information on this design is provided in Requirement .0504(1)(d).

The material placed in the landfill will be compacted and will receive periodic cover. At completion of waste placement, the final cover system will be designed to meet the requirements of NCDENR Solid Waste Rule 15A NCAC 13B .1627.

The landfill will be constructed in three phases. The initial phase, Phase 1, will be constructed across the northern width of the proposed footprint, with subsequent phases constructed extending the landfill to the south. In order to provide a stable subgrade for the landfill, an ash fill constructed in accordance with the NCDENR Solid Waste Rules found in 15A NCAC 13B .1700, will be utilized as a portion of the subgrade for Phase 1. This fill will provide an engineered subgrade that will improve the characteristics of the subgrade for the area of the footprint that was formerly ash basin. The information required by Rule 15A NCAC 13B .1700 will be submitted in a subsequent notification.

² The Ash Basin is part of the treatment system for water utilized at Marshall Steam Station and is permitted under NPDES Permit #NC0004987

3.3 ESTIMATED LANDFILL CAPACITY

The estimated capacity of the landfill presented in this report is based on information available at the time of submittal. Additional geotechnical borings are being performed and based on the information obtained from those borings, a detailed excavation plan will be developed. The detailed excavation plan and the associated capacity information will be presented in the Construction Plan Application.

The estimated total gross airspace capacity of the landfill footprint shown on Drawing 6 was calculated by:

- assuming no excavation and;
- by calculating the capacity of the landfill from where the landfill slopes intersect the existing ground.

The estimated capacity of the landfill footprint, based on the calculations described above is as follows:

Estimated Total Gross Airspace (Volume below final cover system)	11,013,310 cubic yards
Subtract Soil for Operations (Assume 7% of Total Gross Airspace)	- 770,932 cubic yards
Estimated Total Capacity for Waste	10,242,378 cubic yards

As described above, this estimated total capacity is based on no excavation; therefore the actual capacity of the landfill will be in excess of the values presented here, once the excavation is included.

4.0 NORTH CAROLINA ADMINISTRATIVE CHAPTER 13B .0503 REQUIREMENTS

.0503 SITING AND DESIGN REQUIREMENTS FOR DISPOSAL SITES

Disposal sites shall comply with the following requirements in order for a permit to be issued:

(1) A site shall meet the following siting requirements:

Response:

The specific requirements of .0503 (1) are addressed on the following pages.

Requirement .0503(1)(a)

A site located in a floodplain shall not restrict the flow of the 100-year flood, reduce the temporary water storage capacity of the floodplain or result in washout of solid waste so as to pose a hazard to human life, wildlife or land or water resources.

Response

The proposed landfill site for the Marshall Steam Station Industrial Landfill #1 is not located in the 100-year floodplain. Therefore, the proposed landfill will not restrict the flow of a 100-year flood, nor will the proposed landfill reduce the temporary water storage capacity of the floodplain or result in washout of solid waste so as to pose a hazard to human life, wildlife or land or water resources.

Drawing 3, *FEMA FIRM³ Data Map*, shows the Base Flood Elevations for the 1% annual chance flood. This information is taken from the National Flood Insurance Program Flood Insurance Rate Map, prepared by the Federal Emergency Management Administration (FEMA), for the area adjacent to Marshall Steam Station. The location of the proposed landfill footprint relative to the 1% annual chance flood is shown on this drawing.

³ Federal Emergency Management Administration (FEMA) Flood Insurance Rate Map (FIRM).

Requirement .0503(1)(b) (i) and (ii)

A site shall be located in consideration of the following:

- (i) a site shall not cause or contribute to the taking of any endangered or threatened species of plants, fish or wildlife;
- (ii) a site shall not result in the destruction or adverse modification of the critical habitat of endangered or threatened species as identified in 50 C.F.R. Part 17 which is hereby incorporated by reference including any subsequent amendments and editions. This information is available for inspection at the Department of Environment, Health, and Natural Resources, Division of Solid Waste Management, 401 Oberlin Road, Raleigh, North Carolina 27605 where copies can be obtained at no cost;

Response

A site evaluation was performed to assess the presence of endangered or threatened species of plants, fish or wildlife or critical habitat of endangered or threatened species. The S&ME letter to the United States Fish and Wildlife Service (USFWS) providing the results of the site evaluation is dated November 30, 2007 and is included in Appendix I. The Protected Species Assessment, prepared by S&ME, that serves as the basis for the site evaluation is also included in Appendix I.

The USFWS response is found in a letter dated January 4, 2007 (2008). The USFWS response states:

According to our records and a review of the information you provided, no listed species or their habitats occur on the site.

The response from the USFWS is included as Appendix II.

Requirement 0503(1)(b)(iii)

A site shall not damage or destroy an archaeological or historical site.

Response

The North Carolina Department of Cultural Resources, State Historic Preservation Office (SHPO) was consulted to determine if an archaeological or historic site was listed at the proposed site. The letter from S&ME to the SHPO is dated November 30, 2007 and is included in Appendix III. The response provided by the SHPO is dated January 9, 2008. The response stated that:

"We have conducted a review of the proposed undertaking and are aware of no historic resources which would be affected by the project."

The response from the SHPO is found in Appendix IV.

Requirement 0503(1)(b)(iv)

A site shall not cause an adverse impact on a state park, recreation or scenic area, or any other lands included in the state nature and historic preserve.

Response

The proposed landfill will not adversely impact a state park, recreation or scenic area or nature or historic preserves. There are no state parks, recreation or scenic areas, or any other lands included in the state nature and historic preserve within ten (10) kilometers (6.2 miles) of the proposed landfill site.

Several boating access areas are located within ten (10) kilometers (6.2 miles) of the proposed landfill site including Hager Creek, McCrary Creek, and Pinnacle access areas. The Marshall bank fishing area is also located approximately one-half mile from the proposed landfill site. All of these access areas are owned by Duke Energy. As operation of the current facility adjacent to the proposed landfill has not adversely impacted the access areas, there will be no impact resulting from the proposed landfill.

S&ME consulted with the North Carolina Natural Heritage Program concerning potential impacts from the landfill construction in a letter dated November 30, 2007, is found in Appendix V.

The response from the North Carolina Natural Heritage Program was:

The natural Heritage Program has no record of rare species, significant natural communities, significant heritage areas, or conservation/managed area at the site not within a mile of the project area.

A copy of the response from the Natural Heritage Program, dated December 19, 2007, is found in Appendix VI.

Requirement 0503(1)(c)

A new site disposing of putrescible wastes shall not be located within 10,000 feet of an airport runway used by turbojet aircraft or within 5,000 feet of an airport runway used by piston-type aircraft;

Response

The proposed landfill will not receive putrescible wastes.

Requirement 0503(1)(d)

A site shall have available adequate suitable soils for cover either on-site or from off-site.

Response

The conceptual design presented on Drawing 6, *Conceptual Plan View Site 1*, will require the following approximate quantities of soil:

- Final cover 469,280 cubic yards
- Soil for Operations 770,932 cubic yards

Preliminary soil borings indicate that this quantity of soil is available on site. The soil volumes and the location of the borrow areas will be provided in the Construction Plan Application.

5.0 NORTH CAROLINA ADMINISTRATIVE CHAPTER 13B .0504 REQUIREMENTS

.0504 APPLICATION REQUIREMENTS FOR SANITARY LANDFILLS

A permit for a sanitary landfill shall be based upon a particular stream of identified waste, as set forth in Rule .0504 (g)(i) and (ii) of this Section. Any substantial change in the population or area to be served, or in the type, quantity or source of waste shall require a new permit and operation plan, including waste determination procedures where appropriate. Five sets of plans shall be required with each application.

(1) The following information shall be required for reviewing a site application for a proposed sanitary landfill:

Requirement .0504(1)(a)

An aerial photograph on a scale of at least 1 inch equals 400 feet and a blueprint of the photograph accurately showing the area within one-fourth mile of the proposed site's boundaries with the following specifically identified:

- (i) Entire property owned or leased by the person proposing the disposal site;
- (ii) Land use and zoning;
- (iii) Location of all homes, industrial buildings, public or private utilities, and roads;
- (iv) Location of wells, watercourses, dry runs, and other applicable details regarding the general topography; and
- (v) Floodplains.

Response

Drawing 4, *Quarter Mile Radius Map*, shows the information for items (i), (ii), (iii), and (iv).
Drawing 3, *FEMA FIRM Data Map*, shows the information for item (v).

Requirement .0504(1)(b)

A map on a scale of at least 1 inch equals 1000 feet showing the area within two miles of the proposed site's boundaries with the following specifically identified:

- (i) Significant ground-water users;
- (ii) Potential or existing sources of ground-water and surface water pollution;
- (iii) Water intakes;
- (iv) Airport and runways; and
- (v) Subdivisions.

Response

The information listed above is identified on Drawing 5, *Two Mile Radius Map Marshall Steam Station*.

The Environmental Data Resources report, dated May 13, 2008 (Inquiry Number 2218902.1s) provides information on significant groundwater users and was used as a source for of information for items (i). A copy of this report is found in Appendix VII.⁴

The Environmental Data Resources report, dated February 28, 2008 (Inquiry Number 2155232.1s) provides information on potential or existing sources of groundwater contamination and was used as a source for of information for items (ii). A copy of this report is found in Appendix VIII.

⁴ Note that in the EDR report there are a large number of wells (users) that are attributed to being located within 2 miles of the site. A large number of these wells are owned by Mid-South Water Systems, located in Sherrills Ford. Since EDR search is based on zip codes, all of the drinking water systems owned by Mid-South Water Systems appear in the report as being located within 2 miles of this site, when in fact they may be located as far away as Shelby, Charlotte, or Gastonia.

Requirement .0504(1)(c)

A geological and hydrological study of the site which provides:

(i) Soil borings for which the numbers and depths have been confirmed by the Division and lab testing of selected soil samples that provide:

(A) standard penetration - resistance;

(B) particle size analysis;

(C) soil classification - USCS;

(D) geologic considerations (slopes, solution features, etc.);

(E) undisturbed representative geologic samples of the unconfined or confined or semiconfined hydrological units within a depth of 50 feet that provide the following information for each major lithologic units:

(I) saturated hydraulic conductivity (or by in-situ);

(II) volume percent water; and

(III) porosity;

(F) remolded sample of cover soils that provide:

(I) saturated hydraulic conductivity,

(II) total porosity,

(III) atterberg limits;

(G) stratigraphic cross-sections identifying hydrogeological units including lithology;

(H) tabulation of water table elevations at time of boring, 24 hours, and seven days (The number of cased borings to provide this information shall be confirmed by the Division.); and

(I) boring logs;

(ii) A boundary plat locating soil borings with accurate horizontal and vertical control which are tied to a permanent onsite bench mark;

(iii) A potentiometric map of the surficial aquifer based on stabilized water table elevations; and

(iv) A report summarizing the geological and hydrological evaluation.

Response

A geological and hydrological study of the site is submitted. Prior to the start of the site investigation, a meeting was conducted with the Division to discuss the numbers, the locations, and the depths of the soil borings. The title of this report is:

**Hydrogeological Study
Industrial Landfill #1
Duke Energy – Marshall Steam Station
Terrell, North Carolina
S&ME Project No: 1411-07-103
June 19, 2008**

This report is included as Volume 2. Information on the depths of the borings and wells is found in the hydrogeologic study.

Requirement .0504(1)(d)

A conceptual design plan presenting special engineering features or considerations which must be included or maintained in site construction, operation, maintenance and closure.

Response

The conceptual plan view for the proposed landfill is presented on Drawing 6, *Conceptual Plan View Site 1*. The engineering features or considerations included in site construction, operation, maintenance and closure are:

1. Subgrade/ash Fill Over Former Ash Basin – Double Liner System
2. Stream Mitigation
3. Buffer from Island Point Rd
4. Asbestos Landfill
5. Relocation of Energy United Power Line
6. Discharge of Leachate and Contact Stormwater to the Ash Basin
7. Placement of Engineered Cover

These engineering features or considerations are discussed below.

Subgrade/Ash Fill Over Former Ash Basin – Double Liner System

The proposed landfill will be constructed on undisturbed land, on an area that was formerly part of the Marshall Ash Basin,⁵ and on an area that was permitted to receive asbestos waste.

The area that was formerly part of the Marshall Ash Basin consists of an area impounded by a dike constructed across the ash basin at approximately elevation 820'. Ash placed upgradient of this 820' Dike was placed by wet sluicing ash from the active ash basin.

To provide a stable subgrade for the landfill across these former portions of the ash basin, a structural fill will be constructed in accordance with Rule 15A NCAC 13B .1700. This fill will be constructed of dry fly ash material generated at Marshall, placed and compacted to achieve a stable subgrade. The fill will be placed southward from the southern edge of the landfill footprint for a distance sufficient to ensure global stability. The elevation of the fill along the southern edge will be designed to provide a minimum post-settlement subgrade of two percent for Phase 2 and Phase 3 footprints. This fill will be designed to support the loads and stresses imposed by the weight of the landfill and to support overlying facility components and to maintain the integrity of the components.

The proposed landfill will be designed to meet the requirements of the Solid Waste Management Act 2007(the Act), Section 7.(b). The Act allows the NCDENR Solid Waste Section to permit a combustion products landfill to be constructed partially or entirely within areas that have been formerly used for the storage or disposal of combustion products at the same facility as the coal-fired generating unit that generates the combustion products, provided:

⁵ The Ash Basin is part of the treatment system for water utilized at Marshall Steam Station and is permitted under NPDES Permit #NC0004987

- The landfill is constructed with a bottom liner system consisting of three components in accordance with the Section 7.(B) of the Act.
- Of the required three components, the upper two components shall consist of two separate flexible membrane liners, with a leak detection system between the two liners.
- The third component shall consist of a minimum of two feet of soil underneath the bottom of those liners, with the soil having a maximum permeability of 1×10^{-7} centimeters per second.
- The flexible membrane liners shall have a minimum thickness of thirty one-thousandths of an inch (0.030"), except that liners consisting of high-density polyethylene shall be at least sixty one-thousandths of an inch (0.060") thick.
- The lower flexible membrane liner shall be installed in direct and uniform contact with the compacted soil layer.
- The Department may approve an alternative to the soil component of the composite liner system if the Department finds, based on modeling, that the alternative liner system will provide an equivalent or greater degree of impermeability.

The Act also requires that the applicant for a permit for a combustion products landfill shall develop and provide to the Department a response plan, which shall describe the circumstances under which corrective measures are to be taken at the landfill in the event of the detection of leaks in the leak detection system between the upper two liner components at amounts exceeding an amount specified in the response plan (as expressed in average gallons per day per acre of landfill, defined as an Action Leakage Rate). The response plan shall also describe the remedial actions that the landfill is required to undertake in response to detection of leakage in amounts in excess of the Action Leakage Rate.

The Act also allows compliance with performance of the landfill to prevent releases of waste to the environment may be determined based on leakage rate rather than monitoring well data. Based on this wording, Duke understands that a groundwater monitoring wells system is not required at this landfill.

Stream Mitigation/Wetlands

One jurisdictional tributary was identified within undisturbed portions of the project area. Stream 1 is a perennial stream that originated near the northwest corner of the Phase 1 footprint. This stream was between three and five feet wide with a bank height of between four and six feet. The dominant substrate was sand with some gravel and cobble. Stream 1 flows approximately 350 linear feet through a riparian wetland terminating at the approximate limit of existing sluiced ash deposition. This stream will be impacted by the proposed landfill footprint.

The jurisdictional tributary identified in this report and delineated in the field by S&ME should be verified by the US Army Corps of Engineers (USACE). Further, S&ME's assessment and classification of on-site streams should be verified by NCDENR Division of Water Quality (DWQ). Impacts to delineated jurisdictional areas associated with future expansion of the existing permitted areas should be discussed with the USACE and DWQ and appropriately

permitted. Wetlands located within portions of the previously-permitted ash landfill are not subject to USACE jurisdiction.

Impacts to wetlands or streams require a Nationwide Permit (NWP) from the USACE. NWP No. 39, available for industrial, commercial and institutional development from the USACE, has a threshold of 0.5 acre of wetlands and up to 300 lf of stream with habitat (aquatically important). In the event that the proposed project-wide impacts exceed these thresholds, an Individual Permit (IP) must be obtained.

At the present time, the discussions and assessments with the USACE and NCDENR DWQ are underway. Duke will inform the Solid Waste section of the results of these activities. The report presenting the results of the Jurisdictional Delineation is presented in Appendix IX.

Buffer from Island Point Rd

Island Point Road is located along the northern edge of the Marshall Property. In order to maintain an adequate buffer between the landfill and this road, Duke has established a 300 foot buffer (approximate) between the northern extent of the landfill footprint and the road. This buffer is in excess of the buffers required by Solid Waste rules.

Asbestos Landfill

Currently Marshall disposes of asbestos containing material in a 38.1 acre area permitted under Solid Waste Permit 18-04. Asbestos has only been placed on approximately 6 to 8 acres of the permitted area. The landfill will receive no waste after June 30, 2008 and will have a final closure cover placed by the end of 2008. Approximately 20.5 acres of the remaining 38.1 acres will be incorporated into the footprint for Phase 2 and Phase 3 of the Industrial Landfill #1.

Relocation of Energy United Power Line

An electric power distribution line transmission line, owned by Energy United crosses the northwest corner of the Phase 1 landfill footprint. This line will be located to the west of the landfill footprint and the associated drainage features prior to construction.

Discharge of Leachate and Contact Stormwater to the Ash Basin

As described above, the landfill will be constructed with a double liner system and a leachate collection system. This system will discharge the collected leachate to a leachate collection basin which will in turn discharge to the Ash Basin. The discharge for the ash basin is permitted by NPDES Permit # NC0004987. The modification to the discharge for the NPDES permit will be addressed by submitting a permit modification to the NCDENR Division of Water Quality.

Placement of Final Engineered Cover System

The final engineered cover system will consist of a 40 mil textured linear low density polyethylene (LLDPE) geomembrane beneath a geocomposite drainage net. The cap will be topped with two feet of soil for vegetative growth. The geomembrane is a barrier layer that prevents rainwater from entering the waste cell of the landfill. The geocomposite drainage net allows water that percolates through the vegetative layer to drain laterally to a collection system.

The final engineered cover system will be constructed with a final slope no steeper than 3:1 (H:V).

The vegetative layer protects the geomembrane and geocomposite from ultraviolet degradation, desiccation, freeze-thaw, wind, and vectors. The soil used in the vegetative layer will be amended as needed and seeded appropriately to prevent erosion.

Requirement .0504(1)(e)

Local government approvals:

(i) If the site is located within an incorporated city or town, or within the extra-territorial jurisdiction of an incorporated city or town, the approval of the governing board of the city or town shall be required. Otherwise, the approval of the Board of Commissioners of the county in which the site is located shall be required. Approval may be in the form of either a resolution or a vote on a motion. A copy of the resolution, or the minutes of the meeting where the vote was taken, shall be forwarded to the Division.

(ii) A letter from the unit of government having zoning jurisdiction over the site which states that the proposal meets all of the requirements of the local zoning ordinance, or that the site is not zoned.

Response

Requirement .0504(1)(e)(i) is not applicable.

Duke Energy will provide the Catawba County Planning Board a copy of this Site Suitability Report. Duke will then seek an approval letter from Catawba County, as stipulated by .0504(1)(e)(ii). Duke will provide NCDENR with a copy of that letter.

Requirement .0504(1)(f)

A discussion of compliance with siting standards in Rule .0503(1) of this Subchapter.

Response:

The .0503 (1) requirements and the Duke response are included with this site suitability package. The proposed design will ensure that the siting requirements specified in Rule .0503 (1) are met.

Requirement .0504(1)(g)

A report indicating the following:

- (i) population and area to be served;
- (ii) type, quantity and source of waste;
- (iii) the equipment that will be used for operating the site;
- (iv) a proposed groundwater monitoring plan including well location and schematics showing proposed screened interval, depth and construction.

Response

(i) The Industrial Landfill #1 at Marshall will receive the wastes described in Section 3.0 of this report. These coal product wastes will be generated at plant Marshall. Asbestos wastes may be generated by any of Duke Energy Carolinas facilities.

(ii) The type, quantity, and source of the wastes is described in Section 3.0 of this report.

(iii) The equipment used to operate the landfill includes but is not limited to: backhoes, bulldozers, front end loaders, trucks to haul the material, excavators, watering and maintenance trucks.

(iv) The landfill will be designed to meet the requirements of the Solid Waste Management Act 2007 (the Act), Section 7.(b). As described in the response to Requirement .0504(1)(d), this design will include a double liner system, with leak detection monitoring. Part (c) of the Act allows compliance with performance of the landfill to prevent releases of waste to the environment may be determined based on leakage rate rather than monitoring well data. It is Duke's understanding that groundwater monitoring wells are not required at this landfill.

Requirement .0504(1)(h)

Any other information pertinent to the suitability of the proposed site.

Response

The review performed by Duke and by its consultants has not identified any concerns with the suitability of the proposed site.

Neither S&ME nor Duke is aware of additional information pertinent to the suitability of the proposed site.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 01/04/2008 has revealed that there are 7 FINDS sites within approximately 2 miles of the target property.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing

allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NC-FITS (North Carolina - Facility Identification Template For States) is North Carolina Department of Environment and Natural Resources' (NCDENR) Facility Identification Template for States that provides a common facility identifier in order to improve accessibility to comprehensive information about environmental regulated entities in the state of North Carolina.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005

Actual: AFS (Aerometric Information Retrieval System (AIRS) Facility
886 ft. Subsystem) replaces the former Compliance Data System (CDS), the
National Emission Data System (NEDS), and the Storage and Retrieval of
Aerometric Data (SAROAD). AIRS is the national repository for
information concerning airborne pollution in the United States. AFS is
used to track emissions and compliance data from industrial plants.
AFS data are utilized by states to prepare State Implementation Plans
to comply with regulatory programs and by EPA as an input for the
estimation of total national emissions. AFS is undergoing a major
redesign to support facility operating permits required under Title V
of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information
on stationary and mobile sources that emit criteria air pollutants and
their precursors, as well as hazardous air pollutants (HAPs).

NC-FITS (North Carolina - Facility Identification Template For States)
is North Carolina Department of Environment and Natural Resources'
(NCDENR) Facility Identification Template for States that provides a
common facility identifier in order to improve accessibility to
comprehensive information about environmental regulated entities in
the state of North Carolina.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/02/2007	Source: EPA
Date Data Arrived at EDR: 12/03/2007	Telephone: N/A
Date Made Active in Reports: 12/28/2007	Last EDR Contact: 01/28/2008
Number of Days to Update: 25	Next Scheduled EDR Contact: 04/28/2008
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 02/19/2008
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/19/2008
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/09/2008	Source: EPA
Date Data Arrived at EDR: 02/05/2008	Telephone: 703-412-9810

Number of Days to Update: 15	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007	Source: EPA
Date Data Arrived at EDR: 12/06/2007	Telephone: 703-412-9810

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

STATE AND LOCAL RECORDS

SHWS: Inactive Hazardous Sites Inventory

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

North Map: 35080-F8 TROUTMAN, NC
Most Recent Revision: 1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> CATAWBA, NC	<u>FEMA Flood Electronic Data</u> Not Available

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> LAKE NORMAN NORTH	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Pennsylvanian

Category: Metamorphic Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: PACOLET

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 6.50 Min: 4.50
2	3 inches	29 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	29 inches	52 inches	clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
4	52 inches	70 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam
gravelly - sandy loam
sandy loam
loam

Surficial Soil Types: clay loam
gravelly - sandy loam
sandy loam
loam

Shallow Soil Types: clay
sandy clay loam
silt loam
clay loam
silty clay loam

Deeper Soil Types: fine sandy loam
weathered bedrock

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Department of Environment & Natural Resources
Telephone: 919-733-2090

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
