**FACILITY CONTACT ADDRESS:**

OmniSource Southeast LLC – Kernersville Plant  
 Bill Perry, Regional Manager  
 PO Box 608  
 Kernersville, NC 27285-0608

**AUDIT PARTICIPANTS:**

John Patrone, NCDENR – Solid Waste Section (SWS)  
 Bill Perry, OmniSource Southeast LLC - Regional Manager  
 James Winegar, OmniSource Southeast LLC - Environmental Manager  
 Bruce Miller, Metal Tek Development LLC - Electrical Supervisor

**STATUS OF PERMIT:**

Permit To Operate (PTO) issued September 2, 2005  
 PTO scheduled expiration date was September 2, 2008  
 Permit extension request letter submitted to SWS, dated March 5, 2008

**PURPOSE OF AUDIT:**

Comprehensive Audit

**NOTICE OF VIOLATION(S):**

None

You are hereby advised that, pursuant to N.C.G.S. 130A-22, an administrative penalty of up to \$15,000 per day may be assessed for each violation of the Solid Waste Statute or Regulations. For the violation(s) noted here, you may be subject to enforcement actions including penalties, injunction from operation of a solid waste management facility or a solid waste collection service and any such further relief as may be necessary to achieve compliance with the North Carolina Solid Waste Management Act and Rules.

**STATUS OF PAST NOTED VIOLATION(S):**

None

**AREAS OF CONCERN AND COMMENTS:**

On February 26, 2010, John Patrone met with Bill Perry, James Winegar, and Bruce Miller to conduct a comprehensive audit of the OmniSource Southeast LLC – Kernersville Plant Auto Shredder Residue Reclamation Operation in Kernersville, Forsyth County.

1. OmniSource Southeast LLC - Kernersville Plant is a scrap metal processing yard. It collects scrap metal from the general public, scrap metal haulers, and industry. A guillotine sheer and shredder are used to chop bulk scrap metal. The facility also has a public drop-off building located at the front of its lot and numerous (scrap metal) boxes and trailers located at businesses throughout the region. Processed scrap metal is shipped-out by truck and railcar.
2. The facility is permitted to operate an auto shredder residue (ASR) reclamation operation that segregates ferrous and non-ferrous, and different constituents of non-ferrous, metals from ASR. A closed industrial/ASR landfill is located at the OmniSource Southeast LLC - Kernersville Plant. A three-story ASR scrap metal sorting operation has been constructed and is owned by Second Pass LLC along with several pieces of machinery used for material handling.
3. The Second Pass scrap metal sorting operation is composed of two independent metal sorting "lines." Each sorting line can run mined ASR or newly derived ASR. Mined ASR is exclusively sorted by the Second Pass metal sorting operation. Waste from the mined ASR is placed back into the ASR landfill. Waste from newly derived ASR is collected and shipped-out to Allied – Charlotte Motor Speedway Landfill (permit No. 13-04). The permit does not authorize the disposal of newly processed ASR or any other solid waste back into the facility's industrial/ASR landfill.
4. Mr. Perry stated that ~ 1/3 of the scrap metal from the ASR landfill has been reclaimed by a previous scrap metal sorting operation and the remaining 2/3 is scheduled to be reclaimed over the next 2 to 4 years.
5. The equipment used to construct the Second Pass metal sorting operation and the way it is configured is considered proprietary. The scrap metal sorting operation currently processes newly derived ASR. Mined ASR will be processed when moisture content is within the operational limit. Mr. Perry stated that he hopes to begin to run mined ASR through the scrap metal sorting operation by April 2010. ASR has not been processed/mined since the previous scrap metal sorting operation was dismantled and removed over two years ago.
6. The facility site plan and operations plan were discussed.
7. The ASR reclamation operation is part of the facility's closure process. Daily and intermediate cover is not required unless windblown material is evident. The ASR landfill has ~ 24 acre footprint and is ~ 75 feet deep.
8. The facility will excavate and refill the interior of the ASR landfill, leaving the banks intact. The banks will be pulled-in in order to reclaim material but maintained/reconstructed to limit runoff.
9. The facility will stockpile feedstock (mined ASR) adjacent to the scrap metal sorting operation, atop the landfill, prior to sorting.
10. Mr. Perry was reminded that daily, monthly, and annual records must be maintained for the amount of ASR material processed/removed (from the landfill) and for the amount of material recovered (ASR removed - recovered = material returned to landfill).
11. Reclaimed product/collected scrap metal will be stored in piles, containers, and covered bins until shipped.
12. The facility plans to use commingled ASR waste fines (from the scrap metal sorting operation) for the top layer of the landfill after waste is placed back into it. A catch basin will control runoff from the stockpiled fines.
13. In case of emergency the Kernersville Fire Department will respond to a fire at the facility. The facility has a fire hydrant on-site that can be utilized by trained staff.
14. There was no indication of erosion or runoff. The facility has constructed numerous catch basins around the ASR landfill, including a series of catch basins adjacent to the new scrap metal sorting operation.
15. Proper signage was posted at the entrance to the scrap metal sorting operation/ASR landfill area.
16. The facility is secured by a gate and personnel are on-site 24-hours a day, 7-days per week.

17. The facility was asked have its operations plan and site plan updated accordingly to reflect the Second Pass scrap metal sorting operation.
