Raleigh, NC 27699-1646

Dear Ms. Drummond:

As per your letter dated May 3, 2010, I have enclosed the results of the 1,500 feet well and receptor survey for the Jackson County Transfer Station. We found forty wells all of which are potable, two potable springs and one non potable spring within 1,500 feet of the scale house. Two maps are enclosed. The aerial photo maps shows where the houses are in relationship to the scale house and the other is a parcel map on which we have placed dots where all the wells and springs are located.

I am currently working with Alec Macbeth of Altamont Environmental, Inc. to put together a plan regarding the placement of the ground water monitoring wells you have requested. He will be submitting this plan for Jackson County.

Thank you for your assistance on this project. If you need any additional information or have any question regarding these documents please call or email me at (828) 586-7577.

Sincerely,

Chad S. Parker  
Solid Waste Director
