Dear Ms. Jones:

I have been operating The Stump Dump, an inert landfill #51-E, for seven years. Occasionally I use a tub grinder to grind and recycle some of the debris, which is then used in my farming operation.

After careful consideration of a local demand for soil and mulch products, and being environmentally responsible, I have concluded that it would be beneficial and a better use of natural resources to process the natural debris transferred to my landfill. The original land surface would not be disturbed – only debris which has been hauled into the landfill. This would require capability to sort and process the natural waste into usable mulch and topsoil.

For this reason, I am making application for necessary permits to allow this activity at my current site.

Thank you for your consideration into this matter

Sincerely,

Larry Boyette
Owner
