Subject: North Wake Landfill - Leachate Pond Decommissioning

Donna,

As we discussed yesterday, I am providing a summary of yesterday's construction progress meeting. During the meeting we discussed the proposed schedule for decommissioning and the general steps in the decommissioning process.

The Contractor is planning to begin construction of a temporary gravity by-pass for leachate within the next week. Upon completion of the by-pass and complete draw-down of the pond, the Contractor will wash down the leachate pond and begin decommissioning. The current schedule is for decommissioning to begin in two weeks.

As previously discussed, the leachate storage pond liner system will be completely removed and disposed within the landfill. Upon removal the clay will be visually inspected. Any stained or saturated soils, which would be indicative of contamination, will be immediately excavated, removed and disposed within the landfill. Once the clay/subgrade appears free of contamination, we will take a minimum of three samples to verify that the pond subgrade/clay is clean. If contaminants are detected the clay soil will be removed & disposed of in the landfill and subsequent samples taken to verify the remaining soil is clean.

As discussed yesterday, samples will be taken a minimum of 6 inches below the soil surface.

Please let me know if you have any questions regarding the above information. Also, the County and CDM are available Friday afternoon to tour the landfill with you and answer any questions. If you are unable to attend on Friday, the group has some availability next Thursday or Friday.

Regards,

Mike

Subject: North Wake Landfill leachate pond removal

Attached is a letter concerning the leachate pond decommissioning at the North Wake Landfill. Only Tommy Esqueda will receive a copy in the mail. You may want to print a copy for your records.
