Subject: RE: Washington Follow up

Hi Joan-

Yes, I did speak to Ed and he said it was fine to work with the data and borings that exist and then update with new cross-sections and potentiometric maps. Ming has mentioned that groundwater flow appears to have changed directions and that the current monitoring well network potentially does not provide adequate coverage to detect changes in groundwater flow. That would be an important issue to resolve.

Have you had a chance to speak to Ed regarding our conversation about Washington County and the Design Hydrogeologic report? Let me know when you do.

Thanks!
