Raleigh, NC 27699-1646

Subject: **Coal Ash Structural Fill Site Annual Report
Westmoreland Partners – Roanoke Valley Energy Facility
Weldon, North Carolina
URS Project No. 31827096.00008**

Dear Mr. Mussler:

On behalf of our client, Westmoreland Partners, Roanoke Valley Energy Plant in Weldon, NC, URS Corporation is submitting the above referenced documentation required by North Carolina Department of Environment and Natural Resources, Division of Waste Management Regulations; Section .1710 Requirements for Beneficial Use of Coal Combustion By-Products (CCB).

Section .1710 (1) – Volume of Coal Combustion by-products produced;
Section .1710 (2) – Volume of Coal Combustion by-products disposed;
Section .1710 (3) – Volume of Coal Combustion by-products used in structural fill facilities; and
Section .1710 (4) – Volume of Coal Combustion by-products used for other uses described in Rule .1708 of this Section.

The attached table shows a total of 160,740.41 tons of Coal Combustion by-products were generated between July 1, 2009 and June 30, 2010. 2,310.71 tons of sludge were disposed in the Halifax County ash Monofill. 74,496.83 tons of ash was landfilled in the Halifax County Ash Mono Cell.

83,932.87 tons of ash were beneficially used at a permitted structural fill facility as identified on the attached table. The structural fill site is identified as the W. Long site and is identified on the attached County GIS tax map for reference. Halifax County tax records show multiple adjoining parcels owned by George Wayne Long along Highway 125 just northwest of Halifax, NC. URS understands that a deep excavation was created several years ago for a proposed railroad alignment project, alongside highway 125. The railroad was never constructed and a portion of the long, narrow excavation was filled with ash and covered with earth as a structural fill facility.
