Attn: Mr. Larry Frost

Reference: Permit application

Dear Larry:

Per our telephone conversation today, we met with the City of Gastonia Building Inspector yesterday to do a walkthrough with us to evaluate the requirements for our obtaining a Certificate of Occupancy at our facility. He informed us that we cannot obtain our CO until he inspects the equipment installed and connected to plumbing and power.

This situation puts us in jeopardy to receive our CO in a timely manner and conflicts with your requirement of not installing the equipment until after we obtain our Operating Permit. Therefore, we request permission from your department to install our equipment as soon as it arrives so we can obtain our CO and get the business started as soon as possible. We will lock out all power and water feeds to the equipment and keep them off until we receive your permission to remove them or upon the issuance of our Operating Permit. This would greatly assist us in getting through the inspection process.

Thank you for this consideration.

Sincerely,

Dale Sullivan, General Manager
