Re: Leachate Management Plan [DIN 11314]  
Anderson Creek Landfill  
Harnett County, North Carolina  
Permit No. 43-03  
Doc ID No. 11322

Dear Mr. Blanchard:

The above referenced document is approved under the following conditions:

1. For pumping operations at the temporary loading stations, we recommend the overflow valve used to release storm water be closed prior to pumping leachate to ensure the valve is in working condition. The valve would then be closed after pumping leachate so that the valve is normally open for releasing storm water.
2. The pipes carrying leachate from the cells to the pumping tank or eventual pump station must be double lined (pipe within a pipe) to protect against leaks in the primary pipe. This design is consistent with the standard requirements for secondary containment at leachate collection facilities.
3. This authorization does not release the facility owner or operator from any liability for adverse impacts to human health or the environment in the operation of the leachate collection system. The owner and operator is responsible for obtaining and maintaining all other permits and licenses necessary for the construction, installation and operation of the facility.

Thank you for your efforts and cooperation in this matter. If you have questions about the permit conditions or questions arise during construction, please contact either me at 919.508.8495 or Drew Hammonds, Environmental Senior Specialist for the facility, at 910.433.3351.

Sincerely,

Geoffrey H. Little  
Environmental Engineer II
