Remedial Investigation Work Plan
Trion, Inc. Facility
Sanford, NC

1.0 Introduction

Hart & Hickman, PC (H&H), on behalf of Fedders Corporation (Fedders) has prepared this Remedial Investigation (RI) Work Plan (Work Plan) for submittal to the North Carolina Department of Environment and Natural Resources (DENR) for completion of a RI of the Trion, Inc. (Trion) facility and property located at 101 McNeill Road in Sanford, Lee County, North Carolina (Site). Fedders is the parent company of Trion.

On August 24, 2010, Fedders entered into an Administrative Agreement for Registered Environmental Consultant (REC) - Directed Assessment and Remedial Action Pursuant to North Carolina General Statutes (N.C.G.S.) 130A-310.9(c) and 15A North Carolina Administrative Code (NCAC) 13C .0300 (Docket No. 10-SF-337) with the DENR for voluntary remedial action at the Site under North Carolina's REC Program. Under this Administrative Agreement and in accordance with the rules and requirements of the REC program, Fedders retained H&H as its REC.

The objectives of the RI are to identify releases of hazardous substances to the environment, identify potential exposure pathways, characterize the nature of such releases, collect sufficient sampling data to support a cleanup-level determination, delineate the areal and vertical extent of contamination, and characterize Site conditions sufficiently to conduct a feasibility study of remedial alternatives and support a proposed remedy.

This RI Work Plan has been prepared as required by the DENR Inactive Hazardous Sites Branch (IHSB) REC Program as presented in the REC Program's Implementation Guidance, dated August 2010. Supporting materials including a Site-Specific Health and Safety Plan (HASP), previous reports, and certifications have been attached as appendices to this report.

1.1 Site Overview

The Site is currently owned and operated by Air System Components, Inc. (ASC), a Tomkins company, which purchased the assets of Trion out of the bankruptcy proceedings of Fedders and its subsidiaries. The Site facility manufactures, assembles, and warehouses air purification equipment. Manufacturing operations consist of metal stamping, forming of parts, parts washing prior to painting, painting, welding, air cleaning unit assembly and packaging, and warehousing prior to shipping.

The Site is located at 101 McNeill Road in Sanford, Lee County, North Carolina (latitude 35° 30' 52", longitude 79° 12' 51"). The Site consists of approximately 25 acres with a 269,000 square-foot, one-story building (Facility) located to the northeast of the intersection of U.S. Route 421 and McNeill Road in Sanford, North Carolina. Mixed industrial and residential properties surround the Site. The Facility consists of office space, a warehouse, and manufacturing space. A paved (asphalt and concrete) driveway, storage area, and loading dock area are present to the rear (east) of the Facility. A grass/landscaped area and a large pond are located on the north side of the Facility. The pond was reportedly used for irrigation and fishing purposes and was noted to exist prior to development of the Site.

Prior to 1966, the Site was reportedly vacant land. According to Manufacturing Engineering Manager, Mr. Jack Fallin, White Consolidated, Inc. (White), formerly Whiting Roberts Company, owned the Site from 1966 until 1984. White manufactured textile equipment at the Site during this period. Air purification equipment has been manufactured at the Site from 1984 to the present. From 1984 to 2008, Trion owned and operated the Site. In 2008, ASC purchased the Site from Trion. A copy of the current property deed is located in Appendix A. A Site Location Map is included as Figure 1. A detailed Site Map, prepared by URS Corporation (URS), is included as Appendix B. A Site Survey Map, which was completed by a Licensed North Carolina Land Surveyor, is included as Appendix C.

2.0 Environmental Setting

2.1 Site Geology

The Site is located within the Wadesboro-Sanford-Durham sub-basin, which is situated within the Piedmont physiographic province of North Carolina. The Piedmont province is bordered to the east by the Coastal Plain physiographic province and to the west by the Blue Ridge physiographic province. The sub-basin lies between the Carolina Slate Belt to the west and the Raleigh Belt to the east. Structurally, the sub-basin is a half-graben flanked by a major normal fault along the western boundary toward which the strata in the basin dip. Near-surface sedimentary rocks in the sub-basin are part of the Sanford Formation and consist of red to brown basin-margin conglomerates and sandstone, inter-bedded with green to brown basin-center sandstone and mudstone.

The occurrence and movement of ground water within rift basins such as the Wadesboro-Sanford-Durham sub-basin is within two separate but interconnected water-bearing zones. A shallow, unconfined zone occurs within the unconsolidated surficial soils and/or weathered bedrock (saprolite) and a deeper zone occurs within the underlying competent sedimentary rocks. Ground water in the shallow unconsolidated materials is typically under water table conditions with generalized ground water flow being from topographic highs (recharge areas) to topographic lows (discharge areas). The occurrence and movement of ground water in the underlying, more competent sedimentary rocks is primarily controlled by joints, fractures, and faults. Ground water within the bedrock may occur under unconfined or confined conditions.

During the Phase II Environmental Site Assessment (Phase II ESA) conducted by URS at the Site in February, April, and May 2008 (Appendix D), competent sedimentary rock was encountered at depths ranging from 50 to 60 feet below ground surface (bgs) and consisted primarily of sandstone. The wells installed as part of the Phase II ESA are screened in the shallow, unconfined zone composed of unconsolidated surficial soils and/or saprolite.

2.2 Site Hydrogeology

As indicated on the United States Geological Survey (USGS) *7.5-Minute Topographic Quadrangle, Colon, North Carolina* (Figure 1), surface elevations at the Site range from a high of approximately 290 feet above mean sea level (amsl) along the western boundary of the Site to a low of approximately 270 feet amsl along the eastern boundary. Based on the slope of the surficial topography, shallow ground water in the immediate vicinity of the Site is expected to flow toward Buffalo Creek, located approximately 900 feet east and topographically down gradient from the Site. Buffalo Creek flows in a southerly direction in the vicinity of the Site. Characteristics of the subsurface conditions beneath the Site have been evaluated based on the findings of numerous assessment activities completed at the Site (see Section 3.1). The results of these assessment activities are discussed within this Work Plan as well as provided in their entirety as attachments to this submittal.

Potentiometric data generated as part of the assessment activities completed to date at the Site indicate that shallow ground water beneath the Site is generally flowing from west to east towards Buffalo Creek. A Ground Water Flow Map generated by URS using ground water elevation data gauged on May 1, 2008 is included as Appendix E.

2.3 Water Resources in the Vicinity

The Facility has reportedly been connected to public water and sewer since it was constructed. No public water supply wells were identified on, or adjacent to the subject property. The North Carolina Surface Water Assessment Program (SWAP) did not identify any public water supply wells within 0.5 miles of the Site. Private water supply wells were observed by URS during a windshield survey along Glenwood Drive, to the southwest of the Site. These water supply wells existed in a small neighborhood located approximately 0.5 mile southwest and up gradient of the Site. The locations of the water supply wells noted during the windshield survey are shown in Appendix F.

A grass/landscaped area and a large pond are located to the north side of the Facility. The pond was reportedly used for irrigation and fishing purposes, and was noted to exist prior to development of the Site. Overland runoff and shallow ground water in the immediate vicinity of the Site are expected to flow toward Buffalo Creek, located approximately 900 feet east and topographically down gradient from the site. Buffalo Creek flows to the south in the vicinity of the Site.

2.4 Environmentally Sensitive Areas in the Vicinity

As per the REC Program, the Site and all adjacent properties must be evaluated for the existence of the environmentally sensitive areas mentioned in Appendix B of the REC Program Implementation Guidance. H&H contacted the following sensitive environment contacts as per the guidelines. The response from each is indicated below:

Contact Agency	Sensitive Environment	Response received by H&H
NC Division of Parks and Recreation-National Heritage Program	State Parks, areas important to maintenance of unique natural communities, sensitive areas identified under the national estuary program, designated state natural areas, state seashore, lakeshore and river recreation areas, rare species	Left a message; awaiting response
NC Planning and Natural Resources	Sensitive Aquatic Habitat, State Wild & Scenic Rivers	Provided Site map, awaiting response
National Park Service	National Seashore, lakeshore and driver recreational areas, national parks or monuments, federal designated Wild & Scenic rivers	Left a message; awaiting response
US Forest Service	Designated and proposed federal wilderness and natural areas, national preserves and forests, federal land designated for the protection of natural ecosystem	No forests present in Lee County
NC Division of Water Quality (DWQ)	State designated for protection or maintenance of aquatic life	According to Nora Deamer, DWQ, Big Buffalo Creek is currently impaired and listed

		on the NC 2010 303(d) list of Impaired Waters for biological integrity due to a poor fish community assessment. Any activity on the Site needs to eliminate sediment, nutrients and any other pollutants from running off.
NC Division of Forest Resources	State preserves and forests	According to Chris Carlson, NC Division of Forest Resources, no state preserves or forests are present in Lee County
US Fish & Wildlife Service	Endangered species	Provided Site map; awaiting response According to the United States Fish and Wildlife Service (USFWS) Critical Habitat Mapper, endangered species are not located in the vicinity of the site
NOAA	Marine sanctuaries	H&H believes that no coastal resources are present in the vicinity of the Site
NC Department of Cultural Resources	National and State Historical sites	Left a message; awaiting response According to the North Carolina State Historic Preservation Office National Register of Historic Places mapping application, no national or state historical sites are located in the vicinity of the Site
NC Division of Coastal Management	Areas identified under coastal protection legislation, coastal barriers or units of a coastal barrier resources system	H&H believes that no coastal resources are present in the vicinity of the Site
NC Wildlife Resources Commission	National or State wildlife refuges	According to Shari Bryant, NC Wildlife Resources Commission, the Site is not located within or near National or State wildlife refuges, game lands,

		Significant Natural Heritage Areas, migratory pathways or critical feeding areas for anadromous fish species, or spawning areas critical for the maintenance of fish species
US Army Corps of Engineers	Wetlands	<p>Provided Site map; awaiting response</p> <p>According to the USFWS National Wetlands Inventory Mapper, a code PFO1A (Palustrine, Forested, Broad-Leaved Deciduous, Temporarily Flooded) wetland habitat exists approximately 1000 feet southeast of the site</p>

Other than the information received from DENR DWQ, it does not appear that there are environmentally sensitive areas known to exist in the vicinity of the Site. Additional information, as provided by the above-listed agencies, will be detailed in the RI Report.

3.0 Regulatory History

The Site was identified as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG) of hazardous waste with United States Environmental Protection Agency (EPA) Identification Number NCD049843998. The Facility reportedly violated four generator pre-transport, transport, and oversight categories under RCRA-SQG. Based on review of the Environmental Data Resources, Inc. (EDR) report, dated December 20, 2007 (included as part of the URS Phase I ESA in Appendix D), compliance for each of the four violations has been achieved. The Site also maintains an Intended Use Plan wastewater permit from the City of Sanford. Process wastewater is generated as part of the manufacturing process during parts washing prior to painting. The process wastewater is discharged to a process wastewater pit located along the northeastern exterior of the Facility. Quarterly or semi-annual monitoring is conducted in accordance with the Industrial User Pretreatment Permit from the City of Sanford prior to discharge to the municipal sanitary sewer system. However, employees reported that prior to the wastewater process pit being connected to the municipal sanitary sewer system, the wastewater previously drained from the process wastewater pit through a former wastewater drainage pipe (which is now capped). This former wastewater drainage pipe reportedly led north from the wastewater pit onto the adjoining property owned by Investment Recovery Services, Inc. (IRS). The terminus of this drainage pipe was reportedly in a wooded area on the adjoining IRS property to the east of the Site.

The facility also maintains a DENR Air Permit (Number 02050R09).

As part of a property transaction, URS completed a Phase I Environmental Site Assessment (Phase I ESA) of the Site for Fedders in January 2008. Concurrent with this effort, a Phase I ESA was also completed by Environmental Quality Management, Inc. (EQM) on behalf of ASC (the current owner of the Site).

The following chemical storage and waste management practices were identified in the URS Phase I ESA.

- The Site uses several hazardous substances and generates hazardous waste as part of its manufacturing operations.
- Hazardous chemicals used at the Facility include: xylene (RCRA waste codes U239, F003), methanol (RCRA waste codes U154, F003), paint thinner (assumed to be acetone (RCRA waste codes U002, F003) or Stoddard solvent (RCRA waste code D001), paint (RCRA waste code D001), and lubricating and cylinder oils (non-RCRA wastes). Waste xylene and paint material is generated in the amount of less than 55 gallons per month.
- Methanol is stored in the power supply area of the Facility and xylene and painting material are stored in a wet paint room (Appendix B). Waste methanol is generated in the amount of less than 5 gallons per month.
- Oil is stored in 55-gallon steel drums in the maintenance room.
- Five, 5-gallon containers of finger cleaner that contains tetrachloroethene (PCE [RCRA waste codes D039, F001, F002]) as its main ingredient were stored in the paint storage room located within the eastern portion of the Facility in the area of the loading dock. The finger cleaner was used in the soldering machine between approximately 1987 and 1997. According to Mr. Jack Fallin, Manufacturing Engineering Manager, Trion began purchasing this material in 1987 and used approximately 30 gallons per year. According to Mr. Fallin, disposal of this material was not necessary because it evaporated. Use of this material ceased in 1998 and the remaining five, 5-gallon containers were stored as stated above. During a Site visit by H&H on September 21, 2010, Mr. Fallin stated these 5-gallon containers had been properly disposed of soon after URS performed its Phase I ESA in 2008.
- One 500-gallon, steel above ground storage tank (AST) was observed outside the northwestern side of the Facility. This AST is kept in secondary containment and is reportedly used to temporarily store waste oil (non-RCRA waste), which is removed monthly by Noble Oil Company of Sanford, North Carolina. The AST is surrounded by a concrete block wall acting as secondary containment. No leakage was observed on the tank or on the ground beneath the tank.

Waste generated as a part of the manufacturing operations consists of general trash, scrap metal, waste oil, and hazardous wastes (primarily methanol and paint waste) generated as a part of the painting operations.

- Hazardous material is picked up monthly for offsite disposal.
- General trash is disposed of in dumpsters located in the loading dock area.
- Scrap metal is stored in separate dumpsters also located in the loading dock area, and is subsequently taken offsite for recycling. These chemical and waste storage areas are indicated on the Site Map included in Appendix B.

Results of the EQM Phase I ESA indicated the following areas of potential environmental concern:

- Terra cotta piping potentially connected to floor drains inside the facility.
- Possible temporary storage of waste from manufacturing of textile equipment.
- The use of black oxide coating in the pond.
- A disturbed area potentially used for landfill on the adjacent property to the east.
- Potential asbestos containing material (ACM) may be present in the boiler room.
- Cracks in a concrete pad located under the former hazardous waste storage area.

Copies of the Phase I ESA reports are included as Appendix D. As a result of environmental concerns identified during the Phase I ESA reports, URS, on behalf of Fedders, completed a Phase II ESA at the Site. The Phase II ESA was conducted to evaluate the presence of ACM and potential impacts to soil and ground water at the Site. The Phase II ESA, dated July 28, 2008, is included as Appendix D. A summary of the Phase II ESA activities and findings is as follows:

In February, April, and May 2008, URS conducted two rounds of assessment activities at the Site to address the above-listed concerns identified in the Phase I ESA. The assessment activities included the advancement of ten direct-push borings and two hand-auger borings to collect soil samples, the installation of five monitoring wells to collect ground water samples, and the collection of one composite sediment sample from the on-site pond. The soil boring and monitoring well locations are shown in Appendix B. Soil and ground water samples were

analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). A background soil sample and sediment sample were analyzed for the eight RCRA metals. Laboratory analytical results indicated the following:

- With the exception of arsenic in one soil sample (SB-9), none of the soil and sediment sample metals results exceeded EPA Region 9 preliminary remediation goals (PRGs) for industrial soils. Soil sample SB-9 was collected as a background sample and is assumed to exhibit naturally occurring levels. None of the VOC or SVOC results for soil and ground water samples exceeded EPA Region 9 PRGs for industrial soils.
- Cis-1, 2-Dichloroethene (Cis-1, 2-DCE) was detected at a concentration of 137 µg/L in the ground water sample collected from monitoring well MW-11, which is above the 2L Standard of 70 µg/L.
- Trichloroethene (TCE) was detected at a concentration of 9.5 µg/L in the ground water sample collected from monitoring well TMW-4, which is above the 2L Standard of 3 µg/L. URS collected an additional ground water sample from this well on March 13, 2008 to verify the previous result. The repeat analysis detected TCE at a concentration of 10.9 µg/L, consistent with the original result of 9.5 µg/L.
- PCE was detected at a concentration of 0.69 µg/L in the ground water sample collected from monitoring well MW-7, which is just below the 2L Standard of 0.7 µg/L.

These analytical results from the Phase II ESA activities are summarized in Appendix G. Based on review of these data, it does not appear that the concerns identified in the Phase I ESAs have impacted the site. Following review of the data generated from the Phase II ESA activities, the ground water impacts identified above appear to be localized in the general vicinity of the former process wastewater drainage line. This information was provided to DENR in the Phase II ESA report, dated July 25, 2008. On October 16, 2008, Fedders received a Notice of Regulatory Requirements for Contaminant Assessment (NORR) from DENR. The NORR indicated that the site was eligible for cleanup through the REC Program without direct oversight from the Branch. Fedders responded to DENR that they were interested in entering the Site into an REC Administrative Agreement.

URS prepared a Limited Remedial Investigation (LRI) report on February 4, 2010 that documents work conducted between September 9 and November 18, 2009. Assessment activities included a geophysical survey to locate the process wastewater discharge line, a pipeline camera survey to inspect the discharge line for potential breaks, soil boring advancement and soil sample collection along the discharge line, and the collection of ground water samples from the existing site monitoring wells. The LRI is included in Appendix D. A summary of the findings of the LRI is presented below.

- The geophysical survey determined that the process wastewater discharge line trends northeast towards MW-11 and storm sewer drop inlet DI-2.
- The pipeline camera survey results indicated the integrity of the process wastewater discharge line appeared to be intact. The discharge line terminated after entering storm sewer drop inlet DI-2. The storm sewer line between drop inlet DI-2 and drop inlet DI-1 to the north was inspected. Several separated joints in the reinforced concrete pipe (RCP) of the storm sewer line were observed in the vicinity of monitoring well TMW-8.
- Seventeen soil borings (DSB-1 through DSB-17) were advanced along the process wastewater drainage and storm sewer lines. Analytical results of soil samples collected from the soil borings indicated elevated concentrations of vinyl chloride (0.0042 mg/kg) above the IHSB Soil Remediation Goal (SRG) of 0.00019 mg/kg in soil sample DSB-6 (4'-5'). Concentrations of cumene (1.9 mg/kg), 1,2,4-trimethylbenzene (30.5 mg/kg), and 1,3,5-trimethylbenzene (13.7 mg/kg) in soil sample DSB-7 (2'-3') exceeded their IHSB SRGs of 1.3 mg/kg, 6.7 mg/kg, and 6.7 mg/kg, respectively.
- Storm sewer line assessment activities terminated at the site property boundary. Additional separated pipeline joints were observed but not assessed near the site property boundary.
- Analytical results of ground water samples indicated elevated concentrations of TCE above the NC 2L standard of 3 µg/L in monitoring wells TMW-4 (13.3 µg/L), MW-6 (2.9 µg/L), and MW-8 (61.6). Cis-1, 2-DCE was detected above the NC 2L standard of 70 µg/L in monitoring well MW-8 (113 µg/L).

These analytical results from the LRI activities are summarized in Appendix G.

URS prepared a draft Technical Memorandum on June 21, 2010 to document additional assessment activities at the site on March 25, 2010. URS collected two confirmatory soil samples (DSB-18 and DSB-19) near DSB-7 to confirm that the detected constituents in DSB-7 (cumene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene) were not representative of site COCs. VOCs were not detected in the soil samples collected from the two soil borings, indicating that the DSB-7 exceedances were likely attributable to surface run-off. The draft Technical Memorandum is included in Appendix D. Analytical results from the additional assessment activities are summarized in Appendix G.

4.0 Project Specifications

4.1 Project Objectives

In accordance with the REC Program rules and regulations, the objectives of the RI are to identify releases of hazardous substances to the environment, identify potential exposure pathways, characterize the nature of such releases and collect sufficient sampling data to support a cleanup-level determination, delineate the areal and vertical extent of contamination, and to characterize Site conditions sufficiently to conduct a feasibility study of remedial alternatives and to support a proposed remedy.

It is important to note that the minimum soil sampling requirements for an RI, per applicable IHSB guidelines, were achieved as part of the Phase II ESA investigation activities. During previous investigations, soil has been sampled and analyzed for VOCs, SVOCs, and metals by EPA Methods 8260, 8270 and 6010, respectively. Ground water at the Site has been analyzed for VOCs and SVOCs; however, a ground water sample has not been collected for metals analysis as these compounds have not been utilized as part of the Facility operations. Ground water at the Site will be evaluated for metals during the RI, fulfilling minimum IHSB ground water sampling requirements. Assessment activities completed at the Site have not included soil and/or ground water analysis of pesticides, polychlorinated biphenyls (PCBs), dioxins, cyanide, and/or formaldehyde as these compounds/constituents have never been utilized as part of the Facility operations and subsequently have never been known to be present on the Site. In accordance with applicable REC sampling requirements, since historical operations and chemicals storage information indicate that these constituents were not used at the Site, their evaluation is not necessary.

The objectives of the RI are to:

1. Complete horizontal delineation of VOCs in ground water.
2. Evaluate location and integrity of the offsite portion of the storm sewer line.
3. Collect soil samples along the offsite portion of the storm sewer line to evaluate the potential for this feature to be the source of ground water impacts.

4. Assess quality of sediments in outfall located to the northeast of the site and on the adjacent property, which is a possible discharge point for the former wastewater drainage line/storm sewer line.
5. Investigate the length and discharge end of the terra cotta piping indentified in the EQM Phase I ESA.

Selected field sampling procedures are discussed in Section 5 of this Work Plan. Adherence to these field procedures will aid sample representativeness and minimize the potential for sample contamination. A Quality Assurance/ Quality Control (QA/QC) program (Section 6) will be implemented to meet the above objectives. Sample collection data quality will be controlled through the use of standard collection methods and field logbooks.

4.2 Project Organization

A list of key staff personnel associated with the site is provided below.

Registered Site Manager (RSM)

Leonard Moretz, PG
Hart & Hickman
(919) 847-4241

Client Contact

Kent Hansen
Consultant to Barrier Advisors, Inc., as Plan Administrator and Trustee of the FC Term Lenders Liquidating Trust

QA Manager

Matt Bramblett, PE
Hart & Hickman
(704) 586-0007

Site Safety Officer (SSO)

Shannon Cottrill
Hart & Hickman
(704) 586-0007

5.0 Field Sampling Plan

H&H will perform RI activities in accordance with applicable REC guidelines. The following scope of work describes: the process of identifying the location and integrity of the offsite portion of the storm sewer line (considered to be a potential source of impacts) and terra cotta piping, soil/sediment sampling associated with the storm sewer line, monitoring well installation, and the collection of ground water samples. Field activities will be performed in accordance with the Site-specific HASP, as presented in Appendix H. It is assumed that the RI activities can be completed with Occupational Safety and Health Administration (OSHA) Level D personal protection equipment (PPE).

Prior to mobilization to the Site, H&H will perform pre-work notifications, acquire off-site access agreements, and obtain monitoring well permits for off-site monitoring wells. In addition, H&H will coordinate with North Carolina One Call to mark public underground utilities in the vicinity of the work area. H&H will retain the services of a geophysical contractor to identify and mark all private underground utilities in the vicinity of the work area. Private utility location will be performed concurrently with the offsite storm water line identification activities.

5.1 Location of Offsite Storm Sewer Line and Terra Cotta Piping

URS identified the location and examined the integrity of the out-of-service process wastewater discharge line connected to the current wastewater pit. As previously discussed, URS identified separated joints in the concrete storm sewer pipe into which the process wastewater discharge line discharges. URS also collected soil samples in the vicinity of the storm sewer line located on the site. However, the exact location of the storm sewer line once it leaves the site property is unknown. The approximate location of the offsite portion of the storm sewer line is indicated in Appendix I. Based on the location of ground water impacts identified at the site it is possible that releases/discharges at separated pipe joints may have occurred when this line was in use. Additional investigation activities will be performed to identify the location and integrity of the offsite portion of the storm sewer line.

According to the EQM Phase I ESA, terra cotta piping was observed on the exterior of the building that is potentially connected to floor drains inside the facility. H&H will attempt to investigate the length and discharge end of the terra cotta piping.

Location of Offsite Storm Sewer Line and Terra Cotta Piping

H&H will use the services of a geophysicist to locate of the offsite portion of the storm sewer line and terra cotta floor drain piping. The geophysicist will use an electromagnetic (EM) instrument and ground penetrating radar (GPR) for this task. EM instruments utilize electromagnetic transmitters and receivers for the detection of subsurface metal and lateral and vertical variations in electrical conductivity. The EM instruments can detect both ferrous and non ferrous metals. The EM61-MK2 instrument is relatively insensitive to interference from nearby surface metal such as fences, buildings, and cars, yet it can detect a single 55-gallon drum at a depth of over 10 feet beneath the instrument. Data can be viewed by the operator for on-the-fly detection, or downloaded to a laptop for processing and analysis. The instrument transmits and receives signals by means of induction and does not require direct ground contact.

GPR is an electromagnetic method that detects interfaces between materials with differing electric properties. The instrument produces a continuous cross section of subsurface reflections that can be viewed by the operator on-the-fly or downloaded to a laptop for more thorough analysis. GPR is able to detect both metallic and non-metallic objects.

Pipeline Camera Inspection

Once the offsite portion of the storm sewer line is located, H&H will evaluate the line's integrity (i.e., cracks, breaks, etc.). A video camera will be used to visually evaluate the condition of the pipe in realtime.

A flexible, fiber optic cable with a specially designed high-resolution video camera on its tip will be inserted into the pipe for inspection. As the cable is pushed through the pipe, the hardened, waterproof camera, equipped with powerful lights, will record its journey and findings. Video images are transmitted to the camera operator who can make an informed diagnosis of problems found. The video inspection can also be saved for a permanent record. H&H will subcontract a

firm that specializes in evaluating the integrity of subgrade pipelines and oversee the subcontractor's work.

5.2 Additional Soil and Sediment Assessment

Once the offsite portion of the storm sewer line is located and inspected, H&H will choose soil sample locations in the vicinity of the line. H&H will oversee a North Carolina-licensed direct push technology (DPT) driller that will advance soil borings along the line in an attempt to identify the release points (if any). If a release point is identified during the geophysical investigation, a soil boring will be advanced at that point. Soil borings will also be advanced approximately every 30 feet on alternating sides of the drainage line along its length (Appendix I). H&H will advance soil borings to ground water, anticipated to be up to 10 feet bgs using DPT. Soil cores will be recovered for visual characterization and field screening with a photo-ionization vapor detector (PID) leading to the selective collection of field samples for laboratory analyses. One soil sample from each boring exhibiting the highest PID concentration will be retained for laboratory analysis. If no soil impacts are identified in soil borings during field screening, a soil sample will not be collected. All soil samples will be submitted to a North Carolina-certified laboratory for analysis of VOCs by EPA Method 8260.

Following location of the storm sewer line, a sediment sample will be collected at the outfall to an unnamed tributary to Buffalo Creek located to the north of the site. The sediment sample will be screened for volatile organic vapor using a PID. If no impacts are identified in the sediment sample during field screening, the sample will not be submitted for laboratory analysis. If the field screening indicates an elevated PID concentration, the sediment sample, as well as an upgradient sediment sample will be collected and submitted for laboratory analysis of VOCs by EPA Method 8260.

5.3 Delineation of Ground Water Impacts

Well Installation

H&H will negotiate with the adjacent property owner (IRS of Fort Worth, Texas) to garner access to the property to install five shallow monitoring wells in an effort to horizontally delineate the offsite down-gradient extent of dissolved phase VOC impacted ground water. These impacts may be associated with the former wastewater drainage pipe, which runs beneath the Site's eastern parking lot and continues onto the IRS property. H&H will oversee a North Carolina-licensed driller during installation of monitoring wells MW-13 through MW-17 at the locations depicted in Appendix I.

Shallow monitoring wells will be installed using hollow stem auger (HSA) and/or air rotary drilling techniques. It is anticipated the proposed shallow wells will be installed to monitor the upper unconsolidated aquifer. Therefore, based on observations from previous assessment activities, it is anticipated the wells will be installed on top of competent sedimentary rock which occurs approximately 30 to 50 feet below land surface. If HSA drilling encounters drilling refusal prior to reaching the water table, an air rotary drill rig will be mobilized to the Site and utilized to continue borehole advancement.

During HSA drilling, soil samples will be collected at 5-foot intervals using a 24-inch long steel barrel split spoon sampler to observe and characterize subsurface lithology and select the appropriate well screen depth interval. The monitoring wells will be constructed using 2-inch diameter flush threaded polyvinyl chloride (PVC) riser pipe and 0.010-inch slot PVC well screen. Each screen section will be 15 feet in length. A sand pack will be installed within the annular space between the well and the borehole from the base of the screen to approximately 2 feet above the screened interval. A 3-foot thick bentonite seal will be placed above the sand pack and the remaining annular space will be tremmie grouted to the ground surface using grout. The monitoring wells will be completed at the surface with a flush-mount well vault with expansion cap and lock. Well construction will be completed in accordance with 15A NCAC 02C.0108 Well Construction Standards.

Well Development

Following installation, the five new wells will be developed using a combination of surging/pumping development techniques to ensure samples representative of undisturbed aquifer conditions are collected. Monitoring wells will be developed with dedicated tubing, footvalves and surge blocks. Groundwater will be purged until the following parameters have stabilized: temperature, dissolved oxygen (DO), turbidity, specific conductivity, oxidation reduction potential (ORP), pH. Stabilization criteria are as follows:

- Turbidity ($\pm 10\%$, less than 10 NTUs)
- DO (± 0.3 mg/L)
- Specific conductance ($\pm 3\%$)
- pH (± 0.1 unit)
- ORP (± 10 mV)
- Temperature ($\pm 3\%$)

Note that a turbidity level below 10 NTUs may be unattainable. If so, development will be continued until it is evident that further improvement is unobtainable. Development water and drill cuttings generated during the well installation process will be contained on-site in labeled, DOT-approved, 55-gallon steel drums for later proper disposal at a permitted facility.

Well Sampling

Following monitoring well installation and development activities, ground water samples will be collected from all existing (TMW-1 through TMW-5 and MW-6 through MW-12) and newly-installed (MW-13 through MW-17) monitoring wells.

Monitoring wells will be sampled via the low flow/low stress sampling method using a peristaltic pump.

Groundwater will be pumped at a flow rate that minimizes water-level drawdown (likely between 100 ml/min and 400 ml/min). Similar to well-development criteria described above, H&H staff will monitor stabilization parameters while pumping groundwater at a low flow rate.

Stabilization is considered to be achieved when three consecutive readings, taken at three to five minute intervals, are within the following limits:

- Turbidity ($\pm 10\%$, less than 10 NTUs)
- DO (± 0.3 mg/L)
- Specific conductance ($\pm 3\%$)
- pH (± 0.1 unit)
- ORP (± 10 mV)
- Temperature ($\pm 3\%$)

Measurements, except turbidity, will be obtained using a flow-through cell. Once stabilization has been achieved, ground water samples will be collected directly into laboratory-supplied containers and submitted for the analysis of total metals by EPA Method 6010. After collecting groundwater samples for total metals, samples will be collected for VOC analysis. The peristaltic pump will be stopped and with the pump head left in the locked position, the tubing will be removed from the well. The pump direction will be reversed so that a groundwater sample, unaffected by the squeezing action of the pumphead, can be collected directly into laboratory-provided, preserved vials. The vials will be submitted for the analysis of VOCs by EPA Method 8260.

5.4 Decontamination

Prior to advancing downhole drilling equipment into the subsurface, equipment will be adequately decontaminated by the following procedures. Hollow stem augers, drill rods, split spoon samplers, and air hammers will be steam cleaned with a hot-water, pressure washer. Additionally, after pressure washing, split spoon samplers will be scrubbed with a brush in a liquinox solution.

As described above in Section 5.3, monitoring wells will be developed with dedicated tubing, footvalves and surge blocks; decontamination of well-development equipment will not be necessary.

A water-level indicator will be used to gauge wells and during low-flow sampling. In-between wells, the indicator will be washed with a liquinox solution, and rinsed with deionized water.

All equipment used onsite will be decontaminated prior to demobilization from the site to ensure protection of the public.

5.5 Investigative Derived Waste

Investigative Derived Waste (IDW) generated during the RI activities, including soil cuttings and purge and decontamination water will be contained in appropriately labeled, 55-gallon, DOT-approved, steel drums. IDW will be separated based on aqueous and solid media.

Following waste classification, the drums will be transported offsite by a North Carolina-licensed treatment/disposal contractor to an approved permitted facility. IDW will be transported, under appropriate manifestation, offsite within sixty (60) days after waste generation.

5.6 Site Survey

Following field activities, H&H will retain a licensed North Carolina land surveyor to survey soil boring, sediment sample, and monitoring well locations. The survey points will be tied into existing survey information for the Site. The survey will record top of casing (TOC) elevations for the new monitoring wells.

5.7 Community Health & Safety Plan

The field activities will be conducted in a manner that is protective of the public. All activities will be conducted in accordance with the Site Specific Health & Safety Plan included as Appendix H. The Site is protected from the public by chain-link fence. Additionally, an exclusion zone will be established which will restrict onsite workers from entering the work area. Routine air quality monitoring will be conducted and any potential storm water runoff or

dust will be controlled. All equipment including drill rigs will be decontaminated prior to egress from the Site.

6.0 QA/QC Program

Field quality control requirements and procedures are discussed below.

Trip blanks consist of ultra-pure water supplied by the laboratory contained in VOC sample containers and preserved similar to VOC samples. These samples serve as a QC check on potential external contamination and/or cross-contamination between VOC ground water samples during shipping and storage. Trip blanks will accompany sampling teams during sample collection and the samples during shipment for each cooler of VOC water samples sent to the laboratory. One trip blank will accompany the ground water VOC samples per day of sampling.

Rinsate blanks are samples of ultra-pure water supplied by the laboratory which have been in contact with decontaminated sampling and/or drilling equipment. These samples serve as a QC check on the decontamination procedure. When new, clean disposable tubing will be used for ground water sample collection, rinsate blanks are not warranted for ground water sampling equipment. With regard to soil sampling equipment, there is a low potential that trace levels of compounds could be transferred between samples if the proper decontamination procedures are followed. Therefore, rinsate samples for soil will not be collected. Decontamination quality assurance will be conducted through careful monitoring of the decontamination procedures.

Field duplicate samples are collected to allow determination of analytical repeatability. One duplicate soil sample will be collected for every 20 soil samples during the site investigation. Duplicate ground water samples will be also be collected at a rate of one sample per every 20 ground water samples. The field duplicates will be analyzed for VOCs by EPA Method 8260.

7.0 Reporting

In accordance with applicable REC guidelines, H&H will prepare a RI Report that summarizes field activities and compares new and existing data to the NCAC 2L Groundwater Standards and the sediment samples to the applicable Soil Remediation Goals (SRGs). The RI Report will include recommendations for any future investigative and/or remedial activities at the site, in accordance with REC Program Rules and Guidance.

8.0 Certification Statements

The required document certification statements for both the Remediating Party and the Registered Site Manager are included in Appendix J.

STATE OF NORTH CAROLINA
COUNTY OF LEE

SPECIAL WARRANTY DEED

THIS DEED, made this 19th day of June, 2008, by and between **TRION, INC.**, a Pennsylvania corporation, hereinafter called GRANTOR, to **AIR SYSTEM COMPONENTS, INC.**, a Delaware corporation, 6450 Poe Avenue, Suite 109, Dayton, Ohio 45414, hereinafter called GRANTEE;

WITNESSETH, that the Grantor, in consideration of TEN DOLLARS and other valuable considerations to it paid by the Grantee, the receipt of which is hereby acknowledged, has bargained and sold and by these presents does bargain, sell and convey unto the Grantee in fee simple, all those certain tracts or parcels of land situated in Lee County, North Carolina, more particularly described as follows:

See attached Exhibit "A."

TO HAVE AND TO HOLD the aforesaid tracts or parcels of land and all privileges and appurtenances thereunto belonging to the Grantee in fee simple. And the Grantor covenants with the Grantee, that Grantor has done nothing to impair such title as Grantor received, and Grantor will forever warrant and defend the title against the lawful claims of all persons claiming by, under or through Grantor, other than the following exceptions:

See attached Exhibit "B."

IN TESTIMONY WHEREOF, the Grantor has caused this instrument to be executed by its duly authorized officer, by approval of the Board of Directors, the day and year first above written.

TRION, INC.

By: Kent E. Hansen
Kent E. Hansen (Printed Name)
Executive Vice President (Title)

STATE OF New Jersey
COUNTY OF Somerset

I, a Notary Public of the county and state aforesaid, certify that Kent E. Hansen personally came before me this day and acknowledged that he is Executive Vice President of TRION, INC., and that he, as Executive Vice President (title), being authorized to do so, executed the foregoing on behalf of the corporation.

Witness my hand and official seal, this 13 day of June, 2008.

NOTES:

- This plat is derived from information gathered by an actual field survey made by this office completed and plated March, 2009.
- Horizontal datum used for this project is NAD 83(CORS96).
- Horizontal and Vertical control were established by ESP using the NCGS VRS RTK network.
- All distances are horizontal ground measurements unless otherwise noted.
- All coordinate values are localized ground coordinates.
- The project was localized around ESP Control Point "CAP 1". The CGF is 0.999874417 (Ground to Grid)
- It was not within the scope of this project to determine flood plain locations on site.
- The horizontal and vertical control exceeds the precision required for Class A urban/suburban topographic surveys.
- The purpose of this survey plat is to serve as a Site Survey Plat for a State-certified REC project.
- Boundary lines shown are per recovered field evidence. A complete title search was not performed as a part of this survey.

Appendix B	Historical Research Documents	
Appendix C	Site Photographs	

URS Corporation (URS) was retained by Fedders Corporation (Fedders) to conduct a Phase I Environmental Site Assessment (ESA) of the Trion, Inc. facility located at 101 McNeill Road in Sanford, Lee County, North Carolina (subject property). The objective of this environmental review was to identify the business environmental risk associated with an asset transaction of the property through a review of potential property contamination issues.

The subject property consists of approximately 25 acres with one 269,000-square-foot, one-story building located northeast of the U.S. Route 421 and McNeill Road intersection in Sanford, North Carolina. The building consists of office space, a loading dock, a warehouse, and manufacturing space. A paved (asphalt and concrete) driveway, storage area, and a loading dock area are present to the rear (east) of the building. A grass/landscaped area and a large pond are located on the north side of the building. The pond was reportedly used for irrigation and fishing purposes, and was noted to exist prior to development of the subject property. The subject property topography is predominantly flat with a slight slope to the northeast toward Buffalo Creek. Storm water run-off flows toward the catch basin and northeastern side of the property.

The subject property was identified as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG) of hazardous waste with EPA ID No.: NCD049843998. The facility had been reported in violation of four generator pre-transport, transport, and oversight categories under RCRA-SQG. Compliance for each of the four violations has been achieved.

The subject property is currently owned and operated by Trion, Inc. Trion uses the facility for manufacturing, assembly, and warehousing of air purification equipment, with associated office space. Manufacturing operations consist of metal stamping and forming of parts, washing of parts prior to painting, painting, welding, assembly and packaging of air cleaning units, and warehousing prior to shipping.

Trion uses several hazardous substances and generates hazardous waste as part of its manufacturing and painting operations conducted on the site. Waste generated as a part of the painting and manufacturing operations consists of general trash, scrap metal, waste oil, and hazardous wastes (primarily methanol and paint waste).

During the course of the Phase I ESA activities, URS identified the following environmental concerns:

- Based on the building's year of construction (1966), there is a potential for asbestos-containing materials (ACM) and lead-based paint to be present in the building. During URS' site visit, suspected ACM were observed in friable materials (boiler and thermal pipe insulations) and non-friable materials (floor tiles, ceiling tiles, drywall, and joint compounds).
- A Phase I ESA conducted by Roux Associates in 1999 reported minor staining adjacent to the outdoor raw material and hazardous waste storage area. Based on this, Roux recommended soil sampling in and adjacent to the outdoor raw material and hazardous waste storage area. Reportedly, no sampling was conducted. During URS' visit, no staining was observed in this area. In addition, no material was stored in the hazardous waste storage area during URS' visit.

1.1 PURPOSE

URS Corporation (URS) was retained by Fedders Corporation (Fedders) to conduct a Phase I Environmental Site Assessment (ESA) of the property located at 101 McNeill Road in Sanford, Lee County, North Carolina (subject property).

The objective of this environmental review is to identify the business environmental risk associated with an asset transaction of the property through a review of potential property contamination issues. The review conforms to the scope and limitations of *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard E 1527-05) and the following non-ASTM scope considerations: environmental compliance, asbestos-containing materials, radon, wetlands, and mold.

1.2 DETAILED SCOPE-OF-SERVICES

URS performed the following tasks:

1. Contracted with Environmental Data Resources, Inc. (EDR) to conduct a regulatory database search of known underground storage tank (UST) facilities; landfills; hazardous waste generation, treatment, storage and disposal facilities; and subsurface contamination in the surrounding area up to within one mile of the center of the subject property (or subject property boundaries). The EDR report is presented in **Appendix A**.
2. Conducted inquiries in person, by telephone, or in writing to the appropriate regulatory agencies for information regarding environmental permits, violations or incidents, and/or the status of enforcement actions at the subject site.
3. Researched the site history of the subject property by (a) reviewing a chronology of aerial photographs and topographic maps available from EDR covering the subject property and adjoining properties; and (b) reviewing historical city directories available from EDR for the subject site and nearby properties. Copies of these documents are presented in **Appendix B**.
4. Conducted a site reconnaissance for obvious evidence of potential contamination such as current hazardous materials storage or use; unusually stained soils, slabs, and pavements; drains, sumps, drums, tanks, and electrical transformers; stressed vegetation; and discarded hazardous materials containers. Photographs taken at the subject site during the URS site reconnaissance are presented in **Appendix C**.
5. Interviewed Jack Fallin, the Production Manager of the Trion, Inc. facility.
6. Evaluated the information collected and prepared this report summarizing our findings, opinions, and conclusions.

1.3 LIMITATIONS AND EXCEPTIONS

This report and the associated work have been provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied.

This ESA is not a regulatory compliance audit or an evaluation of the efficiency of the use of any hazardous materials at the subject property.

Unless otherwise specified, the tasks included no collection and analysis of samples. Findings and opinions are based on information available from public sources on specific dates (historical photographs, maps, and regulatory agency files, lists, and databases); this information changes continually and is frequently incomplete. Unless URS has actual knowledge to the contrary, information provided to URS or obtained from interviews is assumed to be correct and complete. URS does not assume any liability for information that has been misrepresented to us or for items not visible, accessible, or present on the subject site during the time of the site reconnaissance.

URS cannot warrant or guarantee that not finding indicators of hazardous materials means that hazardous materials do not exist on the subject site. There is no investigation thorough enough to preclude the presence of materials on the subject site, which presently, or in the future, may be considered hazardous. Because regulatory evaluation criteria are constantly changing, concentrations of contaminants present and considered to be acceptable may, in the future, become subject to different regulatory standards and require remediation.

Where records indicate that prior remedial work or tank removals were performed, there is the possibility that the work may not have been performed correctly or completely. Opinions and judgments expressed herein are based on URS' understanding and interpretation of current regulatory standards, and should not be construed as legal opinions.

1.4 USER RELIANCE

This ESA report has been prepared for use solely by Fedders, its affiliates, and their respective successors. This report shall not be relied upon by or transferred to any other party, or used for any other purpose, without the express written authorization of URS.

2.1 LOCATION AND LEGAL DESCRIPTION

The subject property is located at the northeast corner of the U.S. Route 421 and McNeill Road intersection in Sanford, Lee County, North Carolina, as shown on **Figure 1**. A complete legal description of the subject property was not provided to URS.

2.2 PHYSICAL SETTING

The subject property is located within the Wadesboro-Sanford-Durham sub-basin which is situated within the Piedmont physiographic province of North Carolina. The Piedmont province is bordered to the east by the Coastal Plain physiographic province and to the west by the Blue Ridge physiographic province. The Wadesboro-Sanford-Durham sub-basin lies between the Carolina Slate Belt to the west and the Raleigh Belt to the east. Structurally, the Wadesboro-Sanford-Durham sub-basin is a half-graben flanked by a major normal fault along the western boundary toward which the strata in the basin dip. Near-surface sedimentary rocks in the Wadesboro-Sanford-Durham sub-basin consist of red to brown basin-margin conglomerates and sandstone, interfingering with green to brown basin-center sandstone and mudstone.

The occurrence and movement of groundwater within rift basins such as the Wadesboro-Sanford-Durham sub-basin is within two separate but interconnected water-bearing zones. A shallow water-bearing zone occurs within the unconsolidated surficial soils and/or weathered bedrock and a deeper zone occurs within the underlying competent bedrock. Groundwater in the shallow unconsolidated materials is typically under water table conditions with generalized groundwater flow being from topographic highs (recharge areas) to topographic lows (discharge areas). The occurrence and movement of groundwater in the underlying bedrock is controlled by joints, fractures, and faults. Groundwater within the bedrock may occur under unconfined or confined conditions.

Based on a review of the U.S. Geological Survey (USGS) 1:24,000 scale topographic map of Colon, N.C. dated 1981, shallow groundwater in the vicinity of the subject property is likely to be encountered at approximately 10 to 20 feet below grade. The direction of shallow groundwater is likely to be influenced by nearby surface bodies of water as well as the general surface topography. Therefore, it can be assumed that the direction of groundwater flow is to the northeast and toward Buffalo Creek.

According to EDR, the predominant surface soil at the subject property is classified as Mayodan sandy loam. Mayodan sandy loam is described as having moderate infiltration rates, an intermediate water holding capacity, and being moderately well and well drained with medium coarse textures.

The National Wetlands Inventory maps (shown in the EDR report, **Appendix A**) show no recorded wetland areas near the subject site. No suspected wetland vegetation was observed on the subject site during URS' site reconnaissance.

URS reviewed Federal Emergency Management Agency (FEMA) flood zone data online at <http://msc.fema.gov>. Flood Insurance Rate Map (FIRM) ID #3710963400J dated September 6, 2006, showed that the subject property is not located in a mapped 100-year or 500-year flood zone. During the site inspection, URS observed that the subject property is relatively flat.

2.3 SITE AND VICINITY GENERAL CHARACTERISTICS

The subject property is currently developed with a 269,000-square-foot, one-story building and is situated in a light industrial area approximately 2 miles northwest of the City of Sanford, North Carolina. **Figure 2** shows the general site layout and characteristics, along with adjacent property uses.

2.4 CURRENT SITE USE

The subject property is currently owned and operated by Trion, Inc. Trion uses the facility for manufacturing, assembly, and warehousing of air purification equipment, with associated office space. Manufacturing operations consist of metal stamping and forming of parts, washing of parts prior to painting, painting, welding, assembly and packaging of air cleaning units, and warehousing prior to shipping.

2.5 DESCRIPTIONS OF STRUCTURES, ROADS AND OTHER IMPROVEMENTS

The subject property consists of approximately 25 acres with one 269,000-square-foot, one-story building located northeast of the U.S. Route 421 and McNeill Road intersection in Sanford, North Carolina. The building consists of office space, a loading dock, a warehouse, and manufacturing space. Two trailers are located near the northeast corner of the building. Paved (asphalt) parking and driveway areas and grass and landscaped areas are present in front of and on the south side of the building. A paved (asphalt and concrete) driveway, storage area, and a loading dock area are present to the rear (east) of the building. A grass/landscaped area and a large pond are located on the north side of the building. The pond was reportedly used for irrigation and fishing purposes, and was noted to exist prior to development of the subject property. Based on the interview with Mr. Fallin, the building was constructed in 1966, and was used by Roberts Company for manufacturing of textile equipment from 1966 to 1984. Trion reportedly moved their operations to this location in 1984.

2.6 CURRENT ADJOINING PROPERTY USES

During the site reconnaissance, URS personnel conducted a walking and drive-by survey of adjoining land uses along accessible roads. **Table 2-1** lists the adjacent businesses and property uses. **Figure 2** also shows the adjacent properties.

TABLE 2-1 – SUMMARY OF ADJACENT PROPERTY USAGE

Direction	Property
North:	Imperial Freezer Services.
East:	American Performance Industries.
South:	Cruco Mills and Industrial Supply Company and McNeill Road.
West:	Frontier Spring Mills to the west across U.S. Route 421.

3.1 TITLE RECORDS

Fedders did not provide URS with a title report for the subject property, nor was the acquisition of a title report within the scope-of-services. However, a previous title search was conducted as part of the Phase I ESA conducted by Roux Associates, Inc. (Roux) during July 1999. The title search traced ownership of the subject property from 1920 to 1984. In June 1984, the subject property was transferred from White Consolidated Industries, Inc. to Trion, Inc.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

URS reviewed the EDR Environmental Lien Search Report. According to the report, there is no environmental lien or any other Activity and Use Limitations (AULs) for the subject property.

3.3 SPECIALIZED KNOWLEDGE

Fedders provided no specialized knowledge about site operations. URS presumes that Fedders would not have specialized knowledge of the activities conducted by the business unit at this site.

3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Fedders, and their agent, conducted an evaluation of the expected market value of the property at the time the property was listed. Fedders provided no information on whether the purchase price is adjusted for known contamination issues.

3.5 OWNER, SITE MANAGER AND OCCUPANT INFORMATION

According to Mr. Kent Hansen, from Fedders, the subject property is currently owned by Trion, Inc. Trion, Inc. is a subsidiary of Fedders Corporation, a leading global manufacturer and marketer of air treatment products. Trion purchased the property in June 1984, before which it operated as Roberts Company for manufacturing textile equipment from 1966 to 1984. The building was originally constructed in 1966. Based on a review of the previous Phase I report prepared by Roux Associates in 1999, the site was apparently farmland prior to 1966, at least back to 1955. URS has contacted the City of Sanford Land Records Division to provide aerial photographs of the subject property and its vicinity. To date, URS has not received any information from the City. If URS receives such information, it will be incorporated in the final report and provided in Appendix B.

3.6 REASON FOR CONDUCTING PHASE I ESA

The Phase I ESA is being conducted for due diligence, which is usually part of a property transaction or other financial transaction involving real estate.

3.7 PREVIOUS INVESTIGATIONS

URS was provided with the following previous investigation:

Title: Phase I Environmental Site Assessment Plan

Prepared for: Fedders Corporation

Date: July 1999

Roux conducted Phase I ESA activities on the subject property while it was operating as Trion, Inc. At the time of the site visit, the subject property consisted of a 263,000-square-foot building with manufacturing, warehousing, and management operations.

Roux observed good housekeeping with the storage of paints, thinners, and solvents outside the rear of the building. Minor staining on the concrete pad, east of the subject property, was observed during the site visit. As a conservative measure, Roux recommended soil sampling in and adjacent to the raw material and hazardous waste storage areas. Reportedly, no sampling was conducted at the site.

4.1 ENVIRONMENTAL DATABASES REVIEW

URS reviewed information from several environmental databases obtained through Environmental Data Resources, Inc. (EDR) to evaluate whether activities on or near the subject property have the potential to create a Recognized Environmental Condition (REC) on the subject property. EDR reviews databases compiled by Federal, State, and local governmental agencies. The complete list of databases reviewed is provided in the EDR report, which is included in **Appendix A**. It should be noted that this information is reported as URS received it and as it is provided in various government databases. It is not possible for URS to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The databases searched and the information obtained is summarized below in **Table 4-1**. Additional supplemental databases searched are summarized in the EDR report. Databases where properties were identified within the search radius are discussed following **Table 4-1**.

TABLE 4-1 – SUMMARY OF ENVIRONMENTAL DATABASES

Type of Database	Description of Database/Effective Date	Search Radius	Number of Identified Sites
Federal ASTM Standard			
NPL	The National Priorities List (NPL) identifies uncontrolled or abandoned hazardous waste sites. To appear on the NPL, sites must have met or surpassed a predetermined hazard ranking system score, been chosen as a state's top priority site, pose a significant health or environmental threat, or be a site where the EPA has determined that remedial action is more cost-effective than removal action.	1.0 mile	0
Proposed NPL	The Proposed National Priorities List (Proposed NPL) identifies uncontrolled or abandoned hazardous waste sites with potential for coverage under the NPL program.	1.0 mile	0
Delisted NPL	The Delisted National Priorities List (Proposed NPL) identifies hazardous waste sites removed from the NPL program.	1.0 mile	0
CERCLIS	The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database identifies hazardous waste sites that require investigation and possible remedial action to mitigate potential negative impacts on human health or the environment.	0.5 mile	0
CERC-NFRAP	The No Further Remedial Action Planned Report (CERC-NFRAP) under CERCLA, also known as the CERCLIS Archive, contains information pertaining to sites that have been removed from the U.S. EPA's CERCLIS database. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.	0.5 mile	0

TABLE 4-1 – SUMMARY OF ENVIRONMENTAL DATABASES

Type of Database	Description of Database/Effective Date	Search Radius	Number of Identified Sites
RCRA CORRACTS	Identifies hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity.	1.0 mile	0
RCRIS TSDs	Resource Conservation & Recovery Information System (RCRIS) treatment, storage, or disposal (TSD) sites	0.5 mile	0
RCRIS Generators	RCRA-regulated hazardous waste generator notifiers list; both Large- and Small-Quantity Generators are included in this list. A RCRA small-quantity generator (SQG) is defined as a facility that generates less than 1,000 kilograms (kg) per month of hazardous waste or less than 1 kilogram per month of acutely hazardous waste. A RCRA large-quantity generator (LQG) is defined as a facility that generates greater than 1,000 kg per month of non-acutely hazardous wastes or greater than 1 kg per month of acutely hazardous wastes.	0.25 mile	0
ERNS	EPA's Emergency Response Notification System (ERNS) list contains reported spill records of oil and hazardous substances.	Target Property	0
State ASTM Standard			
State Haz. Waste	A registry of contaminated sites where cleanup is managed by the state agency (State Superfund Registry)	1.0 mile	0
IMD	Incident Management Database	0.5 mile	4
SWF/LF	Active, closed, and inactive permitted non-hazardous landfills.	0.5 mile	0
LUST	Leaking Petroleum Storage Tank Database	0.5 mile	4
UST	State Underground Storage Tank (UST) sites	0.25 mile	0
ASTs	State Aboveground Storage Tanks	0.25 mile	0
DRYCLEANERS	Drycleaner Facility Listing.	0.25 mile	0
BROWNFIELDS	Brownfield Site Assessments that are being cleared under EPA monies.	0.5 mile	0
AIRS	Airs Database.	Target Property	0
INDIAN RESERV	Indian Reservations	Target Property	0
INDIAN UST	USTs on Indian Land. Effective Date	0.5 mile	0
EDR Historical Auto Stations	EDR Proprietary Records	0.25 mile	0
EDR Historical Cleaners	EDR Proprietary Records	0.25 mile	0

4.1.1 Subject Property

The subject property, listed as Trion Incorporated, was identified on the EDR database as a RCRA SQG of hazardous waste. The facility had been reported in four violations of generator pre-transport, transport, and oversight categories under RCRA-SQG. Compliance for each of the four violations has been achieved.

4.1.2 Site Vicinity

The database search identified four LUST sites within the specified search radii. All of these four sites are also identified under the State IMD database for the same incidents. Three out of these four sites have an elevation that is the same or higher than the subject property. These three sites are residences and had reported a heating oil tank at each site and subsequent UST removal. Soil was treated in place and the incidents were closed out. The fourth site, Spanco Industries, located at 1605 Boon Trail Road, is approximately 1,800 feet away and at a relatively lower gradient from the subject property. The review of the EDR report shows the follow up status for the incident and zero amount of release detection at the site. Based on the review, the distance from the subject property and the fact that the site is located downgradient, the site is not expected to present an environmental concern to the subject property.

4.1.3 Federal, State, and Local Wells

According to EDR, no public water supply well was identified adjacent to the subject property.

4.1.4 Other Information

URS reviewed the Orphan Sites list, which is a list of sites that have not been geocoded based on a lack of sufficient data regarding their exact location, presented in the EDR report. The review of the Orphan Sites list did not identify properties that are likely to have created a REC at the subject property. A copy of the complete EDR database is included in this report as **Appendix A**.

4.2 REGULATORY AGENCY CONTACT

During the performance of an environmental assessment, State and local regulatory agencies having jurisdiction over the subject site may be contacted to evaluate the following information: the status of relevant environmental permits; whether there have been any violations, or other similar correspondence from such agencies; whether any corrective action or remediation is planned, currently taking place, or has been completed at the subject property; whether there have been any reported violations or complaints that the subject property is not in compliance with environmental laws, regulations, or standards, and whether the subject property is under investigation for such non-compliance; whether the subject property is listed on any of the regulatory databases; and whether there is any other pertinent documentation on file with such regulatory agencies regarding the subject site or surrounding sites of concern.

URS submitted written Freedom of Information Act requests to government agencies listed below to obtain information regarding evidence of contamination, environmental permits, violations, or corrective actions at the subject property.

During the performance of this ESA, URS contacted the State Fire Marshall for the City of Sanford, North Carolina. As of the completion of this report, URS has not received a response from the Fire Marshall. If URS receives responses that alter the conclusions of this report, an addendum letter will be provided to Fedders.

4.3 HISTORICAL USE INFORMATION ON THE SUBJECT SITE AND ADJOINING PROPERTY

The subject property is currently developed with one 269,000-square-foot building. Prior to development, the subject property was utilized for farming.

URS contacted EDR to obtain available historical documents, including historic aerial photographs, historic topographic maps, city directories, and Sanborn Fire Insurance Maps. EDR provided aerial photographs for the years 1973, 1983, and 1993. EDR historical topographic maps dated 1970 and 1981 were reviewed. **Table 4-2** below summarizes the historical site use from the aerial photographs and topographic map provided by EDR. Copies of the historic topographic maps and aerial photographs are included in **Appendix B**.

TABLE 4-2 – CHRONOLOGICAL SUMMARY OF HISTORIC LAND USE

Historical Land Use Source	Date	Observations
EDR Historical Topographic Map	1970	The subject property and south of the subject property were shown as developed with building structures on them. Residential development exists southwest of the subject property. The surrounding area is undeveloped and shown as farmland.
EDR Historical Aerial Photograph	1973	The subject property and surrounding areas are shown as in the previous topographic map.
EDR Historical Topographic Map	1981	There is more development to the south of the subject property. The north side of the subject property is shown the same as in the previous aerial photograph.
EDR Historical Aerial Photograph	1983	The subject property and surrounding areas are shown as in the previous aerial photograph.
EDR Historical Aerial Photograph	1993	The subject property and surrounding areas are shown as in the previous aerial photograph. More development is shown to the northwest of the subject property.

Sanborn Fire Insurance Maps were not available for this area. URS requested EDR to provide a search of City Directories in the area of the subject property for URS’ review to evaluate the types of businesses located at the subject property and surrounding properties. The subject property address was not listed in the City Directory until 1987.

ASTM E1527-05 standards for Phase I ESAs require that historical land use be identified to the property’s first developed use (including agriculture) or back to 1940, whichever is earlier using reasonably ascertainable sources. The earliest historical source reviewed by URS was a historical topographic map from 1970. The next earliest historical source reviewed was an aerial photograph from 1973. Both aerial photographs indicate that the subject property was developed with a building structure. Based on a review of the previous Phase I report prepared by Roux Associates in 1999, the site was apparently farmland prior to 1966, at least back to 1955. URS was not provided with any photographs of the subject property along with the report prepared by

Roux. URS has contacted the City of Sanford Land Records Division to provide aerial photographs of the subject property and its vicinity. To date, URS has not received any information from the City. If URS receives responses that alter the conclusions of this report, an addendum letter will be provided to Fedders.

5.1 METHODOLOGY AND LIMITING CONDITIONS

URS conducted a reconnaissance of the site on Wednesday, December 26, 2007 to evaluate current site use and to identify potential sources of hazardous substances onsite and offsite (on adjacent properties). The URS site investigator, Mr. Michael Chang, was accompanied by Mr. Jack Fallin of Trion, Inc. **Figure 2** is a General Site Plan showing features observed on the subject property. Weather conditions at the time of the site reconnaissance were cloudy, with a temperature of approximately 60 degrees Fahrenheit. Select photographs taken during the site reconnaissance are presented in **Appendix C**.

URS conducted the site reconnaissance by visually observing the subject property. The periphery of the subject property was observed by walking and driving, and was viewed from adjacent roads.

5.2 GENERAL SITE SETTING

As previously referenced, the subject property consists of approximately 25 acres with one 269,000-square foot one story building located northeast of the U.S. Route 421 and McNeill Road intersection in Sanford, North Carolina. The building consists of office space, a loading dock, warehouse, and manufacturing space.

5.3 INTERIOR AND EXTERIOR OBSERVATIONS

5.3.1 Hazardous Substances and Petroleum Products

Trion uses several hazardous substances and generates hazardous waste as part of its manufacturing and painting operations conducted on the site. Hazardous chemicals used at the facility include: xylene, methanol, paint gun cleaner, paint, and lubricating and cylinder oils. Methanol is stored in the power supply area of the building and xylene and painting material are stored in a wet paint room. Oil is stored in 55-gallon steel drums in the maintenance room.

Waste generated as a part of the manufacturing operations consists of general trash, scrap metal, waste oil, and hazardous wastes (primarily methanol and paint waste) generated as a part of the painting operations. Waste methanol is generated in the amount of less than 5 gallons per month. Waste xylene and paint material is generated in the amount of less than 55 gallons per month. Used oil is stored in a 500-gallon above-ground storage tank kept in secondary containment on the north side of the building. Hazardous material is picked up monthly for offsite disposal. General trash is disposed off in dumpsters located in the loading dock area. Scrap metal is stored in separate dumpsters located in the back near the trailer, and is subsequently taken off site for recycling. According to the site contact, Mr. Jack Fallin, the facility has three 5-gallon containers of trichloroethane (TCA) stored in the paint storage room and is in the process of disposing of these containers. According to Mr. Fallin, TCA is not currently used as a part of the operations. The last use of TCA was in 1997.

The Phase I ESA conducted by Roux Associates in 1999 reported minor staining adjacent to the outdoor raw material and hazardous waste storage area. During URS' visit, no staining was observed in the hazardous material storage areas.

5.3.2 Storage Tanks

No evidence of underground storage tanks (USTs) was observed during the site reconnaissance. According to Mr. Fallin, USTs have never been present on the site.

One 500-gallon, steel aboveground storage tank (AST) was observed outside the northwestern side of the building. This AST is reportedly used to temporarily store waste oil, which is removed monthly by Noble Oil Company of Sanford, North Carolina. The AST is surrounded by a concrete block wall acting as secondary containment. No leakage was observed on the tank or ground beneath the tank.

5.3.3 Odors

Unusual or strong odors were not noted at the subject property at the time of the site reconnaissance.

5.3.4 Pools of Liquid

Pools of liquid were not observed at the subject property at the time of the site reconnaissance.

5.3.5 Drums and Containers

No other drums or containers, besides the products identified in **Section 5.3.1**, were observed at the subject property at the time of the site reconnaissance.

5.3.6 Unidentified Substance Containers

No other unidentified substance containers, besides the drums identified in **Section 5.3.1**, were observed at the subject property at the time of the site reconnaissance.

5.3.7 PCB-Containing Equipment

URS observed one pad-mounted transformer exterior of the northwestern portion of the building. The transformer was not labeled to identify its polychlorinated biphenyls (PCB) content. In addition, the previous Phase I ESA report by Roux suggests non-PCB containing transformer fluid in the transformer at the site. Reportedly, the transformer is owned and maintained by Progress Power Company. URS did not observe staining near the transformer.

The facility also uses fluorescent lighting. The ballasts in fluorescent lights often contain PCBs. Proper handling and disposal of the potentially PCB-containing ballasts are required in the event the fixtures are removed from the facility.

5.3.8 Emergency Generators

No emergency generator was present at the subject property at the time of the site reconnaissance.

5.3.9 Pits, Ponds, and Lagoons

No pits or lagoons were observed or reported on the subject property at the time of the site reconnaissance. There is a surface water pond located on the north side of the subject property. According to our site contact, this pond was historically used for watering plants and fishing.

5.3.10 Stained or Corroded Surfaces or Soil

URS did not observe staining in the area. No stained soil was observed on the subject property at the time of the site reconnaissance.

5.3.11 Stressed Vegetation

No stressed vegetation was observed on the subject property at the time of the site reconnaissance.

5.3.12 Solid Waste

General trash in the form of office paper, break room waste, general packaging, and restroom wastepaper is disposed of in dumpsters located in the loading dock area. Reportedly, this waste is picked up by Waste Management Company on a weekly basis. Scrap metal is stored in separate dumpsters located in the back near the trailer, and is subsequently taken off site for recycling.

5.3.13 Drinking Water Supply

Drinking water for the subject property is supplied by the City of Sanford Public Works. No potable water wells were observed on the subject property at the time of the site reconnaissance.

5.3.14 Wastewater and Storm Water

Sanitary wastewater from the subject property is discharged to the City of Sanford Public Works via an underground line. Storm water runoff appears to flow toward the catch basins along the northeastern boundary of the subject property.

5.3.15 Wells

No onsite wells were reported or observed during the site reconnaissance.

5.3.16 Septic Systems

The site is on the municipal sanitary sewer system and, according to site contacts, does not have a septic system. Evidence of onsite disposal of wastewater was not observed.

5.3.17 Wetlands

Wetland areas were not observed on the subject property during the site reconnaissance.

5.3.18 Asbestos-Containing Materials (ACM)

Based on the age of the building (1966), there is a potential for asbestos-containing material to be present in the building. During URS' site visit, suspected ACM were observed in both non-friable materials (floor tiles, ceiling tiles, drywall, and joint compounds) and non-friable materials (boiler and thermal pipe insulations).

5.3.19 Lead-Based Paint

Use of lead in household paint was banned in 1978. The United States Department of Housing and Urban Development (HUD) defines lead-based paint (LBP), when analyzed with a portable x-ray fluorescent (XRF) instrument, as paint which contains greater than 1.0 mg/cm² of lead. Based on the age of the building (1966), there is a potential for lead-based paint to be present within the building.

In accordance with the scope of work, and based on the non-residential occupancy of the subject property, no LBP screening was performed as part of this assessment.

5.3.20 Mold

During the site inspection, URS did not observe any water damage or suspected mold in the subject building.

5.3.21 Radon

During the site inspection, URS did not observe any leaks or staining and did not detect any unusual odors from the vents.

A radon survey was not included in the scope of work for the performance of this Phase I ESA; however, the EDR database provided information from the USGS National Radon Database developed by the EPA. Six sites were tested in zip code 27330, which includes Lee County, North Carolina. The radon tests indicated an average of 0.6 picocuries per liter (pCi/L) on the first floor of the test sites. Based on these results, the EPA has classified the Lee County as Zone 3, with an indoor average level less than 2 pCi/L. The subject property building is constructed on a concrete slab with no sub-grade levels. Although radon gas can migrate through cracks in the concrete, based on the construction of the site, condition of the concrete floor, the building's commercial (i.e., non-residential) use and the ventilation system, URS believes that the potential for the accumulation of radon gas at the site is low and does not recommend testing at this time.

URS personnel interviewed Mr. Jack Fallin of Trion, Inc. at the time of the site reconnaissance. The information obtained during this interview is reported in the applicable sections of this report.

7.1 FINDINGS

During the course of the Phase I ESA activities, URS identified the following environmental concerns:

- Based on the age of the building (1966), there is a potential for asbestos-containing material and lead-based paint to be present in the building. During URS' site visit, suspected ACMs were observed in floor tiles, ceiling tiles, boiler and thermal pipe insulations, drywall, and joint compounds.
- Trion uses several hazardous substances and generates hazardous waste as part of its manufacturing and painting operations conducted on the site. Hazardous chemicals used at the facility include: xylene, methanol, paint gun cleaner, paint, and lubricating and cylinder oils. The Phase I ESA conducted by Roux Associates in 1999 indicated minor staining adjacent to the outdoor raw material and hazardous waste storage area. Based on this, Roux recommended soil sampling in and adjacent to the outdoor raw material and hazardous waste storage area. Reportedly, no sampling was conducted. During URS' visit, no staining was observed in this area. In addition, no material was stored in the hazardous waste storage area during URS' visit.
- There is a surface water pond located on the north side of the subject property. According to the site contact, this pond was historically used for watering plants and fishing. The general topography of the site is slightly sloped to northeast.

7.2 OPINIONS

Based on the information available to URS at this time, site research, and results of this Phase I ESA, environmental concerns were noted regarding asbestos-containing material, lead-based paint, and previous Phase I recommendations for soil sampling at the subject property.

7.3 CONCLUSIONS

URS has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 of the property located at 101 McNeill Road in Sanford, North Carolina. Any exceptions to, or deletions from, this practice are described in **Section 1.3** of this report. As a conservative measure, URS recommends a non-destructive screening-level hazmat survey, including collection and analysis, of the samples for suspect asbestos-containing and lead-based paint building material. Based on the site operations, URS also recommends performing soil borings in and adjacent to hazardous waste storage area and near the pond located north of the boundary to collect and analyze two or three soil and groundwater samples at each location.

No additional URS services were contracted by Fedders.

This section includes qualification statements of the environmental professionals responsible for conducting the ESA and preparing this report.

The site reconnaissance and file reviews were performed by Mr. Michael Chang of the URS office in Charlotte, North Carolina. Mr. Chang has over 2 years of experience in regulatory compliance, property condition assessment, and due diligence assessments. Report writing and record reviews were performed by Mr. Raj Naik of the URS office in Gaithersburg, Maryland. Mr. Naik has over 10 years of experience in due diligence assessments. Mr. Naik has an M.S. degree in Environmental Engineering.

The report was reviewed by Mr. Greg Quandt of the URS office in Gaithersburg, Maryland. Mr. Quandt is Department Head in Strategic Environmental Management Department and has over 15 years of experience in the environmental field, including Phase I Environmental Site Assessments.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE AND LOCAL RECORDS

IMD: Incident Management Database.

A review of the IMD list, as provided by EDR, and dated 07/21/2006 has revealed that there are 4 IMD sites within approximately 0.5 miles of the target property.

TRION INCORPORATED (Continued)

1000336916

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NC-FITS (North Carolina - Facility Identification Template For States) is North Carolina Department of Environment and Natural Resources' (NCDENR) Facility Identification Template for States that provides a common facility identifier in order to improve accessibility to comprehensive information about environmental regulated entities in the state of North Carolina.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007	Source: EPA
Date Data Arrived at EDR: 09/05/2007	Telephone: N/A
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 08/31/2007
Number of Days to Update: 36	Next Scheduled EDR Contact: 10/29/2007
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/27/2007	Source: EPA
Date Data Arrived at EDR: 08/29/2007	Telephone: N/A

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Number of Days to Update: 70

Next Scheduled EDR Contact: 03/17/2008

Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005	Source: Department of Energy

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Inactive Hazardous Sites Inventory

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 07/12/2007
Date Data Arrived at EDR: 07/13/2007
Date Made Active in Reports: 09/04/2007
Number of Days to Update: 53

Source: Department of Environment, Health and Natural Resources
Telephone: 919-733-2801
Last EDR Contact: 10/10/2007
Next Scheduled EDR Contact: 01/07/2008

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Most Recent Revision:	1981
South Map:	35079-D2 SANFORD, NC
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

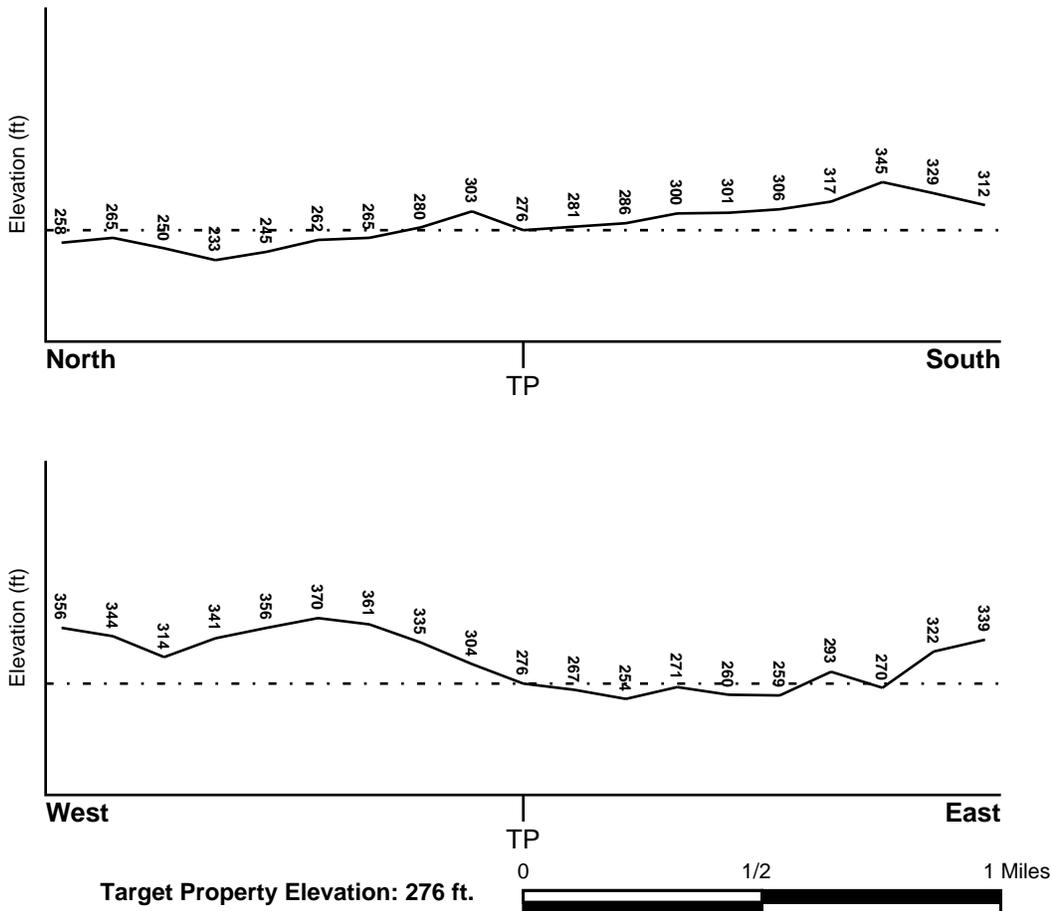

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	<u>FEMA Flood Electronic Data</u>
LEE, NC	Not Available

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
COLON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Triassic
Series: Triassic
Code: Tr *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: MAYODAN

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	12 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 6.00 Min: 4.50
2	12 inches	18 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	18 inches	47 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 2.00 Min: 0.60	Max: 5.50 Min: 4.50
4	47 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
fine sandy loam
clay loam
channery - silt loam
loam

Surficial Soil Types: silt loam
fine sandy loam
clay loam
channery - silt loam
loam

Shallow Soil Types: loam
sandy clay loam
clay
very channery - silt loam
silt loam

Deeper Soil Types: unweathered bedrock
weathered bedrock
loamy sand

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Telephone: 919-733-2090

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

ENVIRONMENTAL LIEN REPORT

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business

Please contact EDR at 1-800-352-0050
with any questions or comments

DEED INFORMATION

Type of Instrument: General Warranty Deed

Title is vested in: Trion, Inc., a corporation

Title received from: White Consolidated Industries, Inc., a corporation

Deed Dated: 06/20/1984
Deed Recorded: 06/22/1984
Book: 356
Page: 698

LEGAL DESCRIPTION

A parcel of land beginning at a concrete monument, said stake being in the Northern right-of-way line of McNeill Road, also identified as Secondary Road 1405, at that point where said right-of-way intersects with the Eastern right-of-way line of U. S. 421; thence, with the Northern right-of-way line of McNeill Road (SR 1405) South 82 degrees 07 minutes 54 seconds East 361.58 feet to an iron pipe; thence North 10 degrees 40 minutes 10 seconds East 220.69 feet to a point, said point being identified by a P. K. Nail; thence North 13 degrees 31 minutes 35 seconds East 141.58 feet to an iron stake; thence North 35 degrees 39 minutes 10 seconds East 62.66 feet to an iron stake, said stake set at the edge of the pavement of the Whitin-Roberts driveway; thence North 50 degrees 03 minutes 41 seconds East 229.57 feet to an iron stake; thence North 26 degrees 37 minutes 28 seconds West 102.80 feet to an iron stake; thence North 55 degrees 43 minutes 21 seconds East 21.03 feet to a P.K. nail in the pavement; thence North 32 degrees 43 minutes 12 seconds West 374.56 feet to a point, said point being identified by a P.K. nail in pavement; thence North 34 degrees 09 minutes 29 seconds West 249.92 feet to an iron pipe; thence North 55 degrees 54 minutes 35 seconds East 37.02 feet to an iron pipe; thence North 34 degrees 11 minutes 53 seconds West 425.94 feet to an iron pipe; thence South 55 degrees 43 minutes 59 seconds West 677.83 feet to an iron pipe; thence South 55 degrees 43 minutes 59 seconds West 219.84 feet to an iron pipe, said iron pipe being located in the Eastern right-of-way line of U. S. 421; thence South 33 degrees 57 minutes 03 seconds East 43.89 feet with the Eastern right-of-way line of U. S. 421 to a concrete monument identifying said right-of-way line; thence, with said right-of-way, South 34 degrees 12 minutes 46 seconds East 1.161.12 feet to a concrete monument, said concrete monument being the point of beginning, of according to the map or plat thereof, as filed of record in a plat or plan entitled "Land Survey Whitin-Roberts Company" and dated 11/23/1983, Lee County, State of North Carolina

NORTH CAROLINA GENERAL WARRANTY DEED

THIS DEED made this 20 day of June, 1984, by and between

GRANTOR

GRANTEE

WHITE CONSOLIDATED INDUSTRIES, INC., a
 corporation
 11770 Berea Road
 Cleveland, Ohio 44111

TRION, INC., a corporation
 P. O. Box 760
 Sanford, North Carolina 27330

Enter in appropriate block for each party: name, address, and, if appropriate, character of entity, e.g. corporation or partnership.

The designation Grantor and Grantee as used herein shall include said parties, their heirs, successors, and assigns, and shall include singular, plural, masculine, feminine or neuter as required by context.

WITNESSETH, that the Grantor, for a valuable consideration paid by the Grantee, the receipt of which is hereby acknowledged, has and by these presents does grant, bargain, sell and convey unto the Grantee in fee simple, all that certain lot or parcel of land situated in the City of _____ Sanford _____ West Sanford _____ Township, Lee _____ County, North Carolina and more particularly described as follows:

BEGINNING at a concrete monument, said stake being in the northern right-of-way line of McNeill Road, also identified as Secondary Road 1405, at that point where said right-of-way intersects with the eastern right-of-way line of U. S. 421; thence, with the northern right-of-way line of McNeill Road (SR 1405) S. 82 degrees 07 minutes 54 seconds East 361.58 feet to an iron pipe; thence North 10 degrees 40 minutes 10 seconds East 220.69 feet to a point, said point being identified by a P. K. Nail; thence North 13 degrees 31 minutes 35 seconds East 141.58 feet to an iron stake; thence North 35 degrees 39 minutes 10 seconds East 62.66 feet to an iron stake, said stake set at the edge of the pavement of the Whitin-Roberts driveway; thence North 50 degrees 03 minutes 41 seconds East 229.57 feet to an iron stake; thence North 26 degrees 37 minutes 28 seconds West 102.80 feet to an iron stake; thence North 55 degrees 43 minutes 21 seconds East 21.03 feet to a P.K. nail in the pavement; thence North 32 degrees 43 minutes 12 seconds West 374.56 feet to a point, said point being identified by a P.K. nail in pavement; thence North 34 degrees 09 minutes 29 seconds West 249.92 feet to an iron pipe; thence North 55 degrees 54 minutes 35 seconds East 37.02 feet to an iron pipe; thence North 34 degrees 11 minutes 53 seconds West 425.94 feet to an iron pipe; thence South 55 degrees 43 minutes 59 seconds West 677.83 feet to an iron pipe; thence South 55 degrees 43 minutes 59 seconds West 219.84 feet to an iron pipe, said iron pipe being located in the eastern right-of-way line of U. S. 421; thence South 33 degrees 57 minutes 03 seconds East 43.89 feet with the eastern right-of-way line of U. S. 421 to a concrete monument identifying said right-of-way line; thence, with said right of way, South 34 degrees 12 minutes 46 seconds East 1,161.12 feet to a concrete monument, said concrete monument being the point of BEGINNING, and being that property described on a survey entitled "Land Survey Whitin-Roberts Company", prepared by John D. Dixon, Jr. dated November 23, 1983, and including 25.170 acres according to said survey.

The property hereinabove described was acquired by Grantor by instrument recorded in

A map showing the above described property is recorded in Plat Book page

TO HAVE AND TO HOLD the aforesaid lot or parcel of land and all privileges and appurtenances thereto belonging to the Grantee in fee simple.

And the Grantor covenants with the Grantee that Grantor is seized of the premises in fee simple, has the right to convey the same in fee simple, that title is marketable and free and clear of all encumbrances, and that Grantor will warrant and defend the title against the lawful claims of all persons whomsoever except for the exceptions hereinafter stated.

Title to the property hereinabove described is subject to the following exceptions:

1. Easement granted to City of Sanford by instrument recorded in Book 351, page 831, Lee County Registry.
2. Easement granted to Carolina Power & Light Co by instruments recorded in Book 355, page 327; Book 104, page 439 and in Map Book 7, page 484, Lee Co. Reg.
3. Easement for right of way granted State Highway Commission by instrument recorded in Book 120, pages 614, 617 and 619, Lee Co. Reg.
4. Easement granted to Heins Telephone Company by instrument recorded in Book 122, page 11, Lee Co. Registry.

IN WITNESS WHEREOF, the Grantor has hereunto set his hand and seal, or if corporate, has caused this instrument to be signed in its corporate name by its duly authorized officers and its seal to be hereunto affixed by authority of its Board of Directors, the day and year first above written.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Total Maps: 0

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

Limited Permission To Make Copies

URS Corporation (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. Page 5

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

WASTE MANAGEMENT

RCRA: Resource Conservation and Recovery Act Information

Source: EPA

Telephone: 800-424-9346

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006
Database Release Frequency: Quarterly

Date of Last EDR Contact: 12/21/2007
Date of Next Scheduled Update: 02/18/2008

BRS: Biennial Reporting System

Source: EPA/NTIS

Telephone: 800-424-9346

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2005
Database Release Frequency: Biennially

Date of Last EDR Contact: 12/13/2007
Date of Next Scheduled Update: 03/10/2008

RAATS: RCRA Administrative Action Tracking System

Source: EPA

Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 12/03/2007
Date of Next Scheduled Update: 03/03/2008

CORRACTS: Corrective Action Report

Source: EPA

Telephone: 800-424-9346

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/26/2007
Database Release Frequency: Quarterly

Date of Last EDR Contact: 12/03/2007
Date of Next Scheduled Update: 03/03/2008

PADS: PCB Activity Database System

Source: EPA

Telephone: 202-566-0500

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 04/12/2007
Database Release Frequency: Annually

Date of Last EDR Contact: 08/09/2007

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-412-9810

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Last EDR Contact: 12/06/2007

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-412-9810

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RMP: Risk Management Plans

Source: Environmental Protection Agency

Telephone: 202-564-8600

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

**Re: Phase II Environmental Site Assessment
Trion, Inc.
101 McNeill Road
Sanford, North Carolina
URS Project No.: 15300963**

Dear Mr. Hansen:

URS Corporation (URS) is pleased to present this report for Phase II Environmental Site Assessment (ESA) activities at the above-referenced property. This work was conducted in accordance with the URS proposals dated January 29, 2008 and April 17, 2008.

1.0 INTRODUCTION

URS was retained by Fedders Corporation (Fedders) to provide transaction support with evaluating the current environmental conditions at its Trion, Inc. (Trion) facility located in Sanford, North Carolina (site or subject property). The site location is shown on Figure 1. The objective of this environmental review was to evaluate and document the business environmental risk associated with the potential divestment of the property.

The subject property consists of approximately 25 acres with one 269,000-square-foot, one-story building located northeast of the U.S. Route 421 and McNeill Road intersection in Sanford, North Carolina. The building consists of office space, a loading dock, a warehouse, and manufacturing space. A paved (asphalt and concrete) driveway, storage area, and a loading dock area are present to the rear (east) of the building. A grass/landscaped area and a large pond are located on the north side of the building. The pond was reportedly used for irrigation and fishing purposes, and was noted to exist prior to development of the subject property. The subject property topography is predominantly flat with a slight slope to the northeast toward Buffalo Creek, which is approximately 2,000 feet northeast of the site. Storm water runoff flows toward the pond on the northern portion of the property.

URS Corporation
200 Orchard Ridge Drive, Suite 101
Gaithersburg, MD 20878
Tel: 301.258.9780
Fax: 301.869.8728

The subject property was identified as a Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG) of hazardous waste with EPA ID No.: NCD049843998. The facility had been reported in violation of four generator pre-transport, transport, and oversight categories under RCRA-SQG. Compliance for each of the four violations has been achieved. The subject property is currently owned and operated by Trion, Inc. Trion uses the facility for manufacturing, assembly, and warehousing of air purification equipment, with associated office space. Manufacturing operations consist of metal stamping and forming of parts, washing of parts prior to painting, painting, welding, assembly and packaging of air cleaning units, and warehousing prior to shipping.

Trion uses several hazardous substances and generates hazardous waste as part of its manufacturing and painting operations conducted on the site. Waste generated as a part of the painting and manufacturing operations consists of general trash, scrap metal, waste oil, and hazardous wastes (primarily methanol and paint waste).

The following sections present the Background and Objective, Scope of Work, Field Activities, Results and Findings, and Conclusions and Recommendations.

2.0 BACKGROUND AND OBJECTIVE

URS conducted a Phase I ESA of the subject property and submitted the final report on January 28, 2008. The Phase I ESA identified the following environmental concerns at the site:

- Based on the building's year of construction (1966), there is a potential for asbestos containing material (ACM) and lead-based paint (LBP) to be present in the building. During URS' site visit, suspected ACM was observed in friable materials (boiler and thermal pipe insulation) and non-friable materials (floor tiles, ceiling tiles, drywall, and joint compounds). In accordance with the scope of work for the Phase I ESA, and based on the non-residential occupancy of the subject property, no LBP screening was performed as part of the Phase I assessment.
- A Phase I ESA conducted by Roux Associates in 1999 reported minor staining adjacent to the outdoor raw material and hazardous waste storage area. Based on this, Roux recommended soil sampling in and adjacent to the outdoor raw material and hazardous waste storage area. Reportedly, no sampling was conducted. During URS' visit, no staining was observed in this area and no material was stored in the hazardous waste storage area.
- As a conservative measure, URS recommended a non-destructive screening-level hazmat survey, including collection and analysis, of samples for suspect ACM and LBP building material. Based on the site operations, URS also recommended performing soil borings in and adjacent to hazardous waste storage area and near the pond located north of the boundary to collect and analyze two or three soil and groundwater samples at each location.

Based on these findings and additional concerns identified by a potential buyer of the subject property, Fedders requested that URS perform a Phase II ESA at the subject property. The objective of the Phase II investigation was to evaluate the presence of ACM and potential impacts to soil and groundwater at the site that might influence the property transaction. Both seller and buyer agreed to only evaluate the presence of suspect friable asbestos. A full asbestos and lead survey was not conducted.

The general scope of work included the collection and analysis of subsurface soils from the north, east, and west sides of the facility, sampling and analysis of groundwater from monitoring wells installed in soil borings based on field screening results, and sampling and analysis of suspect ACM in the boiler room. These activities took place during February 2008. Results from the groundwater sampling indicated a presence of chlorinated solvents in one of the monitoring wells located along the northeastern property boundary.

Based on the findings of the initial Phase II ESA, Fedders and the prospective site buyer, Tomkins, decided to conduct additional investigations to further delineate the extent of the groundwater impacts and to attempt to identify the source of the impacts. The general scope of work for the additional investigation included the collection and analysis of subsurface soils from the north and east sides of the facility and sampling and analysis of groundwater from monitoring wells installed in soil borings.

3.0 SCOPE OF WORK

Based on the concerns identified during the Phase I ESA, the following tasks were included in the initial Phase II ESA:

- Task 1: Identify proposed sampling locations and clear public utilities. Mobilize a direct-push sampling probe to the site and collect ten (10) subsurface soil samples as well as samples from two (2) hand-augered borings and submit for appropriate laboratory analysis.
- Task 2: Sample groundwater from soil boring locations and submit the samples for appropriate laboratory analysis.
- Task 3: Collect a composite sediment sample from the pond located on the northern portion of the property and submit to the laboratory for RCRA metals analysis.
- Task 4: Identify and collect bulk samples of suspect ACM associated with the boiler room thermal system insulation.
- Task 5: Prepare a report providing an interpretation of the laboratory results, findings, conclusions, and recommendations.

Based on the results from the initial Phase II ESA and concerns of the potential buyer, URS and Fedders developed a supplemental scope of work that included the following tasks:

Task 6: Collect four (4) sediment samples from the pond to be analyzed for RCRA metals and volatile organic compounds (VOCs)

Task 7: Identify proposed sampling locations and clear public utilities. Install two (2) additional soil borings to the north and south of the waste oil AST as well as one (1) additional soil boring in the former hazardous waste storage area. Soil sample depth to be determined in the field based on criteria established by Fedders, Tomkins and URS.

Task 8: Mobilize a drill rig with hollow stem auger and air rotary capabilities to install one (1) deep and six (6) shallow permanent monitoring wells throughout the subject property. The deep monitoring well will be installed to a depth of approximately 65 feet below grade. The depths of the shallow monitoring wells will be determined in the field based on criteria established by Fedders, Tomkins and URS.

Task 9: Sample groundwater from each of the installed monitoring wells one week after well installation and submit the samples for VOC and/or semi-volatile organic compound (SVOC) analysis.

Task 10: Perform slug tests on up to three (3) existing site monitoring wells to evaluate the aquifer hydraulic conductivity.

Task 11: Prepare and submit a letter report to Fedders, including a summary of field activities and laboratory results, soil boring logs, laboratory data, a topographic map, and site figures indicating soil and groundwater sampling locations.

4.0 FIELD ACTIVITIES

4.1 Clearance of Public Utilities

URS coordinated with Fedders in identifying locations for subsurface investigations. URS contracted a private utility locator, Taylor Wiseman and Taylor (TWT), to identify and mark the presence of public and private utilities at the subject property in the vicinity of the subsurface investigation. Sampling locations avoided utility easements identified on the site plan and utilities marked by TWT. As an additional precaution, URS advanced each location by hand auger to 4 feet below the surface to ensure no utility line was damaged during the direct-push and hollow stem auger/air rotary drilling.

4.2 Sample Locations

4.2.1 Soil Borings

During the initial Phase II field activities, on February 13, 2008 URS observed the installation of 10 direct-push soil borings throughout the subject property. The soil borings were installed by Akers Environmental, a North Carolina- licensed well driller, using a Geoprobe drill rig. In

In addition, two hand-augered borings were advanced inside the building for the collection of subsurface soil samples. The locations of the soil borings are shown on Figure 2. A description of these locations is provided below.

- SB-1, SB-2, SB-3 were advanced northeast of the pond at the property boundary and SB-10 was advanced north of the pond to evaluate if any past uses of the pond may have affected the shallow groundwater.
- SB-4 was advanced to the east of the building along the eastern property boundary in an assumed down-gradient or side-gradient direction from the loading docks and process water pit.
- SB-5 was advanced in the assumed down-gradient direction from the former hazardous waste storage area along the eastern property boundary.
- SB-6 was advanced in the area of the former hazardous waste storage area.
- SB-7 was advanced north of the paint storage area.
- SB-8 was advanced northeast of the metal waste dumpster.
- SB-9 was advanced along the southwestern property boundary, as an assumed up-gradient, background sample.
- ISB-1 and ISB-2 were advanced in the paint wash room near floor drain sanitary piping.

On April 30, 2008, URS observed the installation of two soil borings at the subject property (SB-11 and SB-13). The soil borings were drilled by South Atlantic Environmental, Drilling, and Construction Company (SAEDACCO), a North Carolina-licensed well driller using a Dietrich D-50 track-mounted drill rig. In addition, one hand auger boring (SB-12) was advanced in an area that was not accessible by the drill rig. The locations of soil borings were discussed during several telephone conversations between Fedders, Tomkins, and URS, and were ultimately located by a representative of Tomkins during a visit to the site. The location of the soil borings are shown on Figure 2. A description of these locations is provided below.

- SB-11 and SB-12 were advanced in areas to the north and south of the waste oil aboveground storage tank (AST).
- SB-13 was advanced inside the hazardous waste storage area.

4.2.2 *Sediment Sampling*

During the initial Phase II field activities, a composite sediment sample was collected from the pond on the subject property. This sample was labeled "Pond." Four discrete samples were

collected during the supplemental field activities (SS-1 through SS-4). Locations of sediment samples are shown on Figure 2.

4.2.2 Groundwater Monitoring Wells

On February 21 and 22, 2008, URS observed the installation of five monitoring wells (TMW-1 through TMW-5). The monitoring wells were installed in the area of some of the previously installed soil boring locations as agreed to by Fedders. The monitoring wells were installed in the locations of SB-9 (TMW-1), SB-2 (TMW-2), SB-5 (TMW-3), SB-4 (TMW-4), and SB-7 (TMW-5) as shown on Figure 2.

On April 21, 22, and 30, 2008, URS observed the installation of seven additional monitoring wells (MW-6 through MW-12) at the subject property. These wells were discussed during conversations between Fedders, Tomkins, and URS, and were located in the field by a representative of Tomkins. The monitoring well locations are indicated on Figure 2.

All monitoring wells were installed by SAEDACCO using a drill rig capable of hollow stem auger and/or air rotary drilling methods. All monitoring well construction logs are included in Attachment A. The monitoring wells were constructed of 2-inch diameter, schedule 40 PVC and were completed to the depths shown below:

Well No.	Total Depth of Well (feet bgs)	Screen Depth (feet bgs)	Top of Sand Pack (feet bgs)
TMW-1	64	49-64	47
TMW-2	23	8-23	6
TMW-3	40	25-40	23
TMW-4	40	25-40	23
TMW-5	40	25-40	23
MW-6	25	15-25	13
MW-7	60	55-60	53
MW-8	35	20-35	18
MW-9	40	25-40	23
MW-10	29	14-29	12
MW-11	38	23-38	21
MW-12	50	35-50	33

Note: bgs - below ground surface

All monitoring wells were installed with 0.010-inch slotted PVC screen. The length of screen varied from 5 to 15 feet, the majority of wells had 15-feet of screen, with an appropriate length

of riser pipe situated above the screen. A sand pack was installed in the annular space between the well screen interval and the borehole from the bottom of the well to 2-feet above the screen, with a 2-foot bentonite seal above the sand pack. The remaining annular space around the well casing was filled with Portland cement to 2 feet bgs.

4.3 Single Well Aquifer Test (Slug Tests)

In order to obtain preliminary information on hydraulic conductivity in the aquifer underlying the site, single well aquifer tests (slug tests) were performed in three monitoring wells (TMW-2, TMW-3, and TMW-4) installed during the Phase II ESA. Standard procedures were followed. Water levels were measured with a transducer and recorded with a data logger. The tests were performed by quickly inserting a solid slug into the well to a position approximately 2 feet below the static water level. Water level readings were continuously recorded on the data logger. This falling-head test continued until the water level returned to 90 percent of the static water level (i.e., within 10 percent of the initial water level measurement prior to conducting the slug test).

The results slug tests are presented in Attachment B and are summarized below. Hydraulic conductivity (K) in the water table wells ranged from 0.06 to 0.5 feet per day (ft/day). Hydraulic conductivities of this magnitude generally correspond to a silt.

Well No.	Hydraulic conductivity (K) in feet per day (ft/day)	Hydraulic conductivity (K) in centimeter per second (cm/sec)
TMW-2	5.03E-01	1.77E-04
TMW-3	7.23E-02	2.55E-05
TMW-4	6.26E-02	2.21E-05

4.4 Sampling and Analysis

4.3.1 Soil Sampling and Analysis

Soil samples from soil borings SB-1 through SB-9 were collected at the surface and at 2-foot intervals. For soil borings SB-11 and SB-13 collected April 30, 2008, split-spoon samples were collected every 5 feet during the drilling process. Monitoring wells MW-6 through MW-12 were logged either through split spoon samples or drill cuttings. URS' field observations generally indicated the presence of firm light brown to orange, red, or grey silty clay to a depth of approximately 8.0 feet bgs; and red, brown, to orange silty stiff clay from 8.0 to 16.0 feet bgs.

The samples were screened for indicators of contamination. Soils were visually screened in the field for odors and discoloration and then were field screened for organic compounds with a

flame ionization detector (FID – Foxboro TVA FID/PID) using an appropriate headspace monitoring technique. The soil sample from each soil boring location that exhibited the most elevated FID reading was submitted for laboratory analysis. The sample location and depth are summarized in the table below:

Soil Boring	Depth of Sample	Soil Boring	Depth of Sample
SB-1	6'-8'	ISB-2	3'-4'
SB-2	6'-8'	SB-11	4'-6'
SB-3	12'-13'	SB-12	2'-3'
SB-4	2'-4'	SB-13	9'-11'
SB-5	4'-6'	MW-6	13'-15'
SB-6	6'-8'	MW-7	4'-6'
SB-7	4'-6'	MW-8	4'-6'
SB-8	0'-2'	MW-9	4'-6'
SB-9	8'-10'	MW-10	4'-6'
SB-10	8'-10'	MW-11	4'-6'
ISB-1	2'-2.5'	MW-12	4'-6'

4.3.2 Sediment Sampling and Analysis

In February 2008, URS collected sediment samples from five different locations within the pond using a stainless steel hand auger. The sediment collected from the pond was placed into a stainless steel mixing bowl to composite. One sample from the composited sediment was collected and placed into a laboratory-supplied container for analysis.

In April 2008, URS collected sediment samples from four different locations within the pond using a stainless-steel hand auger. Sediment sample SS-1 was collected in the area of two PVC pipes located in the southeast corner of the pond. Sediment sample SS-2 was collected near the pump house and AST in the southwest corner of the pond. Sediment sample SS-3 was collected in the vicinity of the pond discharge pipe. Sediment sample SS-4 was collected in the northwest corner of the pond near the drainage ditch. The samples from the pond were collected and placed into laboratory supplied containers for analysis.

4.3.3 Groundwater Sampling and Analysis

Prior to collecting groundwater samples, URS collected depth to water level measurements using a flat tape water level meter (Testwell High Accuracy Water Level Meter WLM-100F) from the top of the well casing. The depth to water measurements and elevations are summarized on Table

1. The groundwater level data was used to create a groundwater flow map, which is included as Figure 3. Due to the slow recharge of wells MW-6 through MW-12, they were not used in contouring the groundwater flow.

Prior to collecting each groundwater sample, URS purged each monitoring well of approximately three well-pore volumes of standing water. The purging was conducted using a clean disposable polyethylene bailer and a new, clean section of nylon rope. The water removed from each well during purging was poured on the ground on-site.

4.5 Preparation and Delivery of Samples and Sample Analysis

The soil, sediment, and groundwater samples were placed in laboratory-supplied sample containers, labeled, and immediately placed in a cooler with icepacks. Upon the completion of the sampling activities, a laboratory chain of custody was filled out. The cooler containing the samples, icepacks and chain-of-custody were submitted to Pace Analytical Laboratories located in Huntersville, North Carolina.

The following table summarizes the samples collected and the laboratory analytical program for each sample.

Sample No.	Date Collected	Matrix	Analysis
SB-1	2-13-08	Soil	SVOCs and VOCs
SB-2	2-12-08	Soil	SVOCs and VOCs
SB-3	2-12-08	Soil	SVOCs and VOCs
SB-4	2-13-08	Soil	SVOCs and VOCs
SB-5	2-13-08	Soil	SVOCs and VOCs
SB-6	2-13-08	Soil	SVOCs and VOCs
SB-7	2-13-08	Soil	SVOCs and VOCs
SB-8	2-13-08	Soil	SVOCs and VOCs
SB-9	2-12-08	Soil	SVOCs, VOCs, and Metals
SB-10	2-13-08	Soil	SVOCs and VOCs
SB-11	4-30-08	Soil	SVOCs and VOCs
SB-12	4-23-08	Soil	SVOCs and VOCs
SB-13	4-30-08	Soil	SVOCs and VOCs
ISB-1	2-13-08	Soil	SVOCs and VOCs
ISB-2	2-13-08	Soil	SVOCs and VOCs
MW-6	4-22-08	Soil	SVOCs and VOCs
MW-7	4-21-08	Soil	SVOCs and VOCs

Sample No.	Date Collected	Matrix	Analysis
MW-8	4-22-08	Soil	SVOCs and VOCs
MW-9	4-30-08	Soil	SVOCs and VOCs
MW-10	4-22-08	Soil	SVOCs and VOCs
MW-11	4-30-08	Soil	SVOCs and VOCs
MW-12	4-30-08	Soil	SVOCs and VOCs
Pond	2-13-08	Sediment	Metals
SS-1	5-1-08	Sediment	Metals and VOCs
SS-2	5-1-08	Sediment	Metals and VOCs

TMW-1	2-26-08	Water	SVOCs and VOCs
TMW-2	2-26-08	Water	SVOCs and VOCs
TMW-3	2-26-08	Water	SVOCs and VOCs
TMW-4	2-26-08	Water	SVOCs and VOCs
TMW-4	3-13-08	Water	VOCs
TMW-5	2-26-08	Water	SVOCs and VOCs
MW-7	4-23-08	Water	VOCs
MW-8	4-23-08	Water	VOCs
MW-8	5-1-08	Water	SVOCs
MW-9	5-1-08	Water	VOCs
MW-10	4-23-08	Water	VOCs
MW-10	5-1-08	Water	SVOCs
MW-11	5-1-08	Water	SVOCs and VOCs
MW-12	5-1-08	Water	VOCs

Notes: all SVOCs are by EPA Method 8270, all VOCs are by EPA Method 8260, all metals are the Eight RCRA Metals by EPA Method 6010

4.6 Collection of Suspect ACM Bulk Samples

Based on discussions with Fedders, URS only collected bulk samples of thermal system insulation (TSI) located in the boiler room.

Bulk samples were collected on February 20, 2008 by Mr. Michael Chang, an Asbestos Hazard Emergency Response Act (AHERA)-accredited and North Carolina-licensed asbestos inspector (NC license number 12453).

Samples were collected using protocols developed by the EPA that include the use of adequate sampling devices (e.g. core sampler, knife, and chisel). Devices are selected according to the material to be sampled. The material was wetted with amended water prior to sampling and placed inside a properly-labeled airtight container. The sampling instrument was subsequently wiped with a clean moist cloth to decontaminate the tool and prevent the potential release of asbestos fibers or contamination of subsequent samples. Data pertinent to each sample such as sample number, location, material description, and material condition were recorded on a field data sheet. Samples and laboratory chain-of-custody submittal sheets were subsequently delivered to a qualified laboratory for analysis.

5.0 RESULTS AND FINDINGS

The laboratory analysis of soil and groundwater samples was completed by Pace Analytical Laboratory. Original laboratory analytical reports and chain of custody forms are provided in Attachment C.

5.1 Metals

The background soil sample (SB-9) detections are compared to the sediment sample detections along with the corresponding comparison standards.

Metals Concentrations in Soil and Sediment

Constituents	Inactive Hazardous Sites Soil Remediation Goals	SB-9 (background)	Pond	SS-1	SS-2	SS-3	SS-4
Arsenic	4.4	5.4	2.7	1.7	3.2	1.7	1.4
Barium	NA	64.4	9.2	9.4	4.1	8.3	8.5
Cadmium	7.4	0.5	ND	0.32	0.8	0.18	0.11
Chromium	44	10.8	9.6	7	16.3	3.9	2.9
Lead	400	8.1	3.8	4.3	5.3	4.3	4.1
Mercury	46	ND	0.011	0.014	0.006	0.0076	0.0056

All results are reported in mg/kg. ND refers to non-detect. Shaded cells are above a standard

With the exception of arsenic, none of the metal results indicated above exceeded the Inactive Hazardous Sites Branch Health-Based Soil Remediation Goals. Soil boring SB-9 indicated a level of arsenic above the Goals, but this was the background sample and it is assumed the sample exhibits natural occurring levels. The concentration of arsenic detected in the pond sediment samples were all less than the concentration detected in soil boring SB-9 and therefore the results are not likely associated with site operations. There is no evidence based on the metals analyses that the pond was once used for a wastewater lagoon.

5.2 Semi-Volatile Organic Compounds (SVOCs)

All 22 soil samples and 12 groundwater samples were submitted for laboratory analysis of SVOCs using EPA Method 8270. None of the SVOC concentrations in the soil or groundwater samples exceeded the Inactive Hazardous Sites Branch Health-Based Soil Remediation Goals or North Carolina 2L Groundwater Quality Standards, respectively.

5.3 Volatile Organic Compounds (VOCs)

All 22 soil samples, 12 groundwater samples, and four sediment samples were submitted for VOC analysis. VOC constituents were detected in 3 of the 22 soil samples and one of the four sediment samples submitted for analysis. However, no constituents detected were above their respective Inactive Hazardous Sites Branch Health-Based Soil Remediation Goals. Acetone was detected in two soil samples submitted for analysis. However, acetone is a common laboratory contaminant. The following table summarizes detectable concentrations in the soil samples (i.e., all other results were “non-detect”).

Detectable VOC Concentrations in Soil Samples

VOC Analyte	Inactive Hazardous Sites Soil Remediation Goals	SB-7 (4-6')	SB-8 (0-2')	MW-12 (14-16')	SS-4
Benzene	64,000	6.8	ND	ND	ND
Ethylbenzene	380,000	ND	5.2	ND	ND
Naphthalene	NS	ND	8.2	ND	ND
1,2,4-Trimethylbenzene	NS	ND	28.3	ND	ND
Xylene(total)	54,000	ND	13.3	ND	ND
m&p-Xylene	NSL	ND	9.6	ND	ND
Acetone	2,800,000	ND	ND	114	869

All results are in ug/kg. ND refers to non-detect. NS refers to no standard.

Chloromethane was detected at a concentration of 2.8 ug/L in the groundwater sample collected from monitoring well TMW-2, which is above the North Carolina 2L Standard of 2.6 ug/L. Cis-1,2-Dichloroethene (Cis-1,2-DCE) was detected at a concentration of 137 ug/L in the groundwater sample collected from monitoring well MW-11, which is slightly above the 2L Standard of 70 ug/L. Trichloroethene (TCE) was detected at a concentration of 9.5 micrograms per liter (ug/L) in the groundwater sample collected from monitoring well TMW-4 which is above the 2L Standard of 2.8 ug/L. URS collected an additional groundwater sample from monitoring well TMW-4 on March 13, 2008 to verify these previous result. The repeat analysis detected TCE at a concentration of 10.9 ug/L, compared to the original result of 9.5 ug/L.

Tetrachloroethene (PCE) was detected at a concentration of .69 ug/L in the groundwater sample collected from monitoring well MW-7 which is at the North Carolina 2L Standard of 0.7 ug/L. The following table summarizes detectable concentrations in the groundwater samples (i.e., all other results were “non-detect”).

Detectable VOC Concentrations in Groundwater Samples

VOC Analyte	North Carolina 2L Standards	TMW-2	TMW-4	TMW-4	TMW-5	MW-7	MW-8	MW-11
Date Sampled		2/26/08	2/26/08	3/13/08	2/26/08	4/23/08	4/23/08	5/1/08
Chloromethane	2.6	2.8	ND	ND	ND	ND	ND	ND
cis-1,2-Dichloroethene	70	ND	30.2	35.6	ND	ND	38.9	137
Trans-1,2-Dichloroethene	10	ND	2	2.9	ND	ND	2.9	6.2
Trichloroethene	2.8	ND	9.5	10.9	ND	ND	12.7	2.3
Tetrachloroethene	0.7	ND	ND	ND	ND	0.69J	ND	ND
1,2,4-Trichlorobenzene	NA	ND	ND	ND	ND	ND	3.9	ND
Trichlorofluoromethane	2.1	ND	ND	ND	1.4	ND	ND	ND

All results are in ug/L. ND refers to non-detect. Shaded cells are above a standard

5.4 Asbestos

All bulk samples were analyzed by URS’ Salem, New Hampshire asbestos laboratory, a National Voluntary Laboratory Accreditation Program (NVLAP)-accredited laboratory. The samples were analyzed by polarized light microscopy (PLM) with dispersion staining techniques using EPA Method 600/M4-82-020. Detection limits using this type of analysis are approximately one percent. According to 29 CFR 1926.1101(a), materials containing greater than 1 percent asbestos are considered asbestos-containing materials.

A total of 20 samples of suspect materials were collected during URS’ visit to the subject property. Materials that were sampled from the building included various components of TSI in the boiler room. The sample locations and analytical results of the materials sampled are summarized in the table below. Analytical Data Sheets are provided in Attachment D.

Limited Asbestos Survey Results

Sample #	Material	Location	Results	Notes
TSI-1	Pipe Wrap	Chiller pipe	NAD	N/A

Sample #	Material	Location	Results	Notes
TSI-2	Pipe Wrap	Chiller pipe	2% Chrysotile	Good condition
TSI-3	Joint Insulation	Chiller pipe	10% Chrysotile	Good condition
TSI-4	Pipe Wrap	Chiller pipe	NAD	N/A
TSI-5	Joint Insulation	Chiller pipe	10% Chrysotile	Good condition
TSI-6	Joint Insulation	Chiller pipe at roof support	15% Chrysotile	Good Condition
TSI-7	Glass rock	Chiller pipe at roof support	NAD	N/A
TSI-8	Glass rock	Chiller pipe at roof support	NAD	N/A
TSI-9	Pipe Wrap	Pump 1	NAD	N/A
TSI-10	Black Insulation	Pump 1	NAD	N/A
TSI-11	Pipe Wrap	Pump 2	NAD	N/A
TSI-12	Black Insulation	Pump 2	NAD	N/A
TSI-13	Pipe Wrap	Pump 3	NAD	N/A
TSI-14	Black Insulation	Pump 3	NAD	N/A
TSI-15	Pipe Wrap	Pump 1	2% Chrysotile	Good condition
TSI-16	Joint Insulation	Pump 1	10% Chrysotile	Good condition
TSI-17	Pipe Wrap	Pump1	NAD	N/A
TSI-18	Pipe Wrap	Joint near pumps	3% Chrysotile	Good condition
TSI-19	Joint Insulation	Joint Near pumps	10% Chrysotile	Good condition
TSI-20	Black Insulation	Chiller	NAD	N/A

NAD – No Asbestos Detected. N/A – Not applicable

Based on the analytical results, 8 of the 20 bulk samples submitted for laboratory analysis for the boiler room were reported by the laboratory to contain asbestos fibers at concentrations greater than 1 percent. Asbestos was identified in the joint insulation and pipe wrap located at joints. The TSI was observed to be in good overall condition and approximately 400 linear feet of TSI were observed in the boiler room.

6.0 CONCLUSIONS AND RECOMMENDATIONS

URS has completed a Phase II ESA at the Trion facility located in Sanford, North Carolina. Ten direct-push borings and two hand-auger borings were advanced to collect soil samples, 12 monitoring wells were installed to collect groundwater samples, and five sediment samples (one composite and four discrete) were collected from the onsite pond.

With the exception of arsenic, none of the metals results in the soil and sediment samples

Trion, Inc. Phase II Environmental Site Assessment
July 25, 2008
Page 15 of 15

exceeded the Inactive Hazardous Sites Branch Health-Based Soil Remediation Goals. The only arsenic exceedence was at the background/upgradient boring location SB-9.

None of the SVOCs results for soil and groundwater samples exceeded the Inactive Hazardous Sites Branch Health-Based Soil Remediation Goals or North Carolina Groundwater Quality Standards.

The groundwater samples collected from monitoring wells had exceedences of the North Carolina Groundwater Quality Standards for chloromethane (one well), Cis-1,2-DCE (one well), TCE (three wells), and PCE (one well).

URS recommends the detected soil concentrations and groundwater concentrations be reported to the North Carolina Department of Environment and Natural Resources (NCDENR) Inactive Hazardous Sites Branch for guidance to closure.

Asbestos was identified in the joint insulation and pipe wrap located at joints. The TSI was observed to be in good overall condition and approximately 400 linear feet of TSI was observed in the boiler room. URS recommends the development and implementation of an asbestos Operations and Maintenance Plan for the TSI located in the boiler room.

If you have any questions or comments about our report, please do not hesitate to contact me at (301) 670-3382.

Sincerely,
URS Corporation

Laboratory Analytical Reports

February 21, 2008

Kristine MacWilliams
URS Corporation
6135 Park South Drive
Suite 300
Charlotte, NC 28210

RE: Project: TRION INC
Pace Project No.: 9213598

Dear Kristine MacWilliams:

Enclosed are the analytical results for sample(s) received by the laboratory on February 14, 2008. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

QUALIFIERS

Project: TRION INC

Pace Project No.: 9213598

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

R1 RPD value was outside control limits.

R3 RPD value was outside control limits due to uncertainty of values at or near the PRL.

S0 Surrogate recovery outside laboratory control limits.

RE: Project: FEDDLERS-SANFORD 15300463.0200
Pace Project No.: 9214325

Dear Kristine MacWilliams:

Enclosed are the analytical results for sample(s) received by the laboratory on February 27, 2008. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

QUALIFIERS

Project: FEDDLERS-SANFORD 15300463.0200

Pace Project No.: 9214325

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

1g Relative Percent Differences (RPD) fail for many of the compounds in the LCS/LCSD. Data was accepted based on acceptable recoveries of the target compounds in the LCS/LCSD and acceptable recoveries of the surrogates in the associated samples.

L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

S0 Surrogate recovery outside laboratory control limits.

RE: Project: FEDDERS TRION INC 15300963
Pace Project No.: 9215383

Dear Kristine MacWilliams:

Enclosed are the analytical results for sample(s) received by the laboratory on March 13, 2008. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

kevin.herring@pacelabs.com

QUALIFIERS

Project: FEDDERS TRION INC 15300963

Pace Project No.: 9215383

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: TRION-FEDDERS 15300963
Pace Project No.: 9217988

Dear Kristine MacWilliams:

Enclosed are the analytical results for sample(s) received by the laboratory on April 24, 2008. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

kevin.herring@pacelabs.com

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

PROJECT NARRATIVE

Project: TRION-FEDDERS 15300963

Pace Project No.: 9217988

Method: EPA 8260

Description: 8260 MSV Low Level

Client: URS Corporation

Date: April 30, 2008

General Information:

3 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: TRION-FEDDERS 15300963

Pace Project No.: 9217988

Method: EPA 8260

Description: 8260/5035A Volatile Organics

Client: URS Corporation

Date: April 30, 2008

General Information:

5 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

QC Batch: MSV/3214

S2: Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

- MW-8 4-6 (Lab ID: 9217988003)
- 1,2-Dichloroethane-d4 (S)
- Dibromofluoromethane (S)

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

QC Batch: MSV/3214

B-: Analyte detected in method blank but was not detected in the associated samples.

- BLANK (Lab ID: 106035)
- Methylene Chloride

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/3214

L3: Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

- LCS (Lab ID: 106036)
- Acetone

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: TRION-FEDDERS 15300963

Pace Project No.: 9217988

Method: ASTM D2974-87

Description: Percent Moisture

Client: URS Corporation

Date: April 30, 2008

General Information:

5 samples were analyzed for ASTM D2974-87. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: TRION-FEDDERS 15300963

Pace Project No.: 9217988

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

B- Analyte detected in method blank but was not detected in the associated samples.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

RE: Project: TRION, INC 15300963
Pace Project No.: 9218523

Dear Kristine MacWilliams:

Enclosed are the analytical results for sample(s) received by the laboratory on May 02, 2008. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

QUALIFIERS

Project: TRION, INC 15300963

Pace Project No.: 9218523

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

R1 RPD value was outside control limits.

RE: Project: TRION, INC 153000963
Pace Project No.: 9218525

Dear Kristine MacWilliams:

Enclosed are the analytical results for sample(s) received by the laboratory on May 02, 2008. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

QUALIFIERS

Project: TRION, INC 153000963

Pace Project No.: 9218525

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

C9 Common Laboratory Contaminant.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

M0 Matrix spike recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

R3 RPD value was outside control limits due to uncertainty of values at or near the PRL.

6135 Park South Drive, Suite 300
Charlotte, NC 28210

URS Project # : 15300-963-02000
Laboratory Batch # : 25225
Date Samples Received : 2/25/2008
Date Samples Analyzed : 2/28/2008
Date of Final Report : 2/28/2008

SAMPLE IDENTIFICATION:

Twenty bulk samples from the Fedders; Charlotte, NC project; submitted by Michael Chang.

These bulk samples were delivered to URS Corporation, Salem, New Hampshire for asbestos content determination.

ANALYTICAL METHOD:

Analytical procedures were performed in accordance with the U.S. Environmental Protection Agency (EPA) Recommended Method for the Determination of Asbestos in Bulk Samples by Polarized Light Microscopy and Dispersion Staining (PLM/DS)(EPA-600/M4-82-020, EPA-600/ R-93-116) and the New York Department of Health Environmental Laboratory Approval Program (NYDOH-ELAP 198.1) with the exception of resinously bound materials (please refer to the comments at the end of this report). This report relates only to those samples actually analyzed, and may not be indicative of other similar appearing materials existing at this, or other sites. Quantification of asbestos content was determined by Calibrated Visual Estimation.

The EPA requires that friable samples with analytical results of 10% or less asbestos, by visual estimation, be treated as asbestos-containing material unless these quantities are verified using the point counting method. The point counting method is a systematic technique for estimating concentration, also using PLM. The point counting method, however, does not increase the analyst's ability to detect fibers. If you would like any of your friable samples with an asbestos content of less than 10% to be point counted, please contact our office. Point counting is not required for those samples in which no asbestos is detected during analysis by PLM.

In any given material, fibers with a small diameter (<0.25µm) may not be detected by the PLM method. Floor tile and other resinously bound material may yield a false negative if the asbestos fibers are too small to be resolved using PLM. Additional analytical methods may be required. URS recommends using Transmission Electron Microscopy (TEM) for a more definitive analysis.

New York state regulations require that all friable samples in which asbestos is detected be point counted (using the NYDOH-ELAP stratified point counting method). New York state regulations also require TEM confirmation of NOB (Non Organically Bound) samples found to have No Asbestos Detected by PLM. These regulations apply only to samples taken within the State of New York.

URS will retain all samples for a minimum of three months. Further analysis or return of samples must be requested within this three month period to guarantee their availability. This report may not be reproduced except in full, without the written approval of the URS, Salem Asbestos Laboratory.

Use of the NVLAP and AIHA Logo in no way constitutes or implies product certification, approval, or endorsement by the National Institute of Standards and Technology or the American Industrial Hygiene Association.

This report is considered preliminary until signed by both the Laboratory Director and the Laboratory Supervisor.

If you have any questions regarding this report, please do not hesitate to contact us.

SUMMARY

Environmental Quality Management, Inc. (EQ) conducted a Phase I Environmental Site Assessment (ESA) of the Trion, Inc. facility (Trion) on December 20, 2007. The Trion facility is located at 101 McNeill Road, Sanford, Lee County, North Carolina and occupies approximately 263,000 square feet of manufacturing, office, and warehouse space. The site is approximately 25 acres and the surrounding property is primarily light industrial and undeveloped land. The site was acquired by Trion in 1984 from White Consolidated Industries, Inc. From 1966 until 1984 White Consolidated Industries, previously the Roberts Company (1977) and Whitin-Roberts, Inc. (1983), owned the subject property and surrounding land. Based on a previous Phase I ESA, White Consolidated, Inc. manufactured textile equipment at the subject property. Prior to 1966 the area was used for agricultural purposes.

Trion manufactures and assembles residential and commercial air purification and humidification systems. There are approximately 94 hourly and salary employees at the facility. The manufacturing schedule is typically 7:00 AM to 3:30 PM Monday to Friday. The office hours are 8:00 AM to 5:00 PM Monday thru Friday. The Phase I ESA was conducted in accordance with the Tomkins Law Department Due Diligence Audit Report and Corrective Action Plan documents.

CONCLUSIONS

Based on the data obtained during the site visit, the environmental database review, and interviews with persons familiar with the subject property and its history, no ASTM recognized environmental conditions (RECs) related to past or current operations on site were identified except for the following:

- ✓ Floor drains and subsurface piping were observed in the facility. Additionally, “terra-cotta” piping material was observed on the exterior of the facility which could be plumbed to the floor drains. This drain system and associated piping have been in place since 1966, from the original build. If the floor drains are connected to terra cotta, there is a potential for subsurface releases. During the site visit, visual deterioration of the floor drains was

noted. Therefore, there is a potential that historical releases of cleaning solvents to the subsurface may have occurred during past operations.

- ✓ The Hazardous Waste Storage area located southeast portion of the main building has damaged and cracked concrete slab. The same area was utilized by the previous owner/operator from 1966 to 1984. It was reported that this area was sealed and cleaned per a 1999 Phase I ESA; however during the EQ site visit there were indications of sever cracking.
- ✓ The potential of asbestos containing material (ACM) may be present in the Boiler Room and the testing rooms located behind the main building. EQ did not conduct an asbestos survey; however, based on the history of the building ACM may be present.
- ✓ The pond located the northwest of the property. During the interview process it was discussed that the pond was possibly constructed during the construction of the main building; however, the water from the pond was never used for any type of processes. According to current site personnel, the previous owner requested a landfill permit from the state and federal agencies. The landfill permit was denied. It was unknown whether during the permit process this location was used to temporarily store waste from manufacturing of textile equipment and the use of black oxide coating.
- ✓ Unknown activities associated with the adjacent property located to the east of the subject property. During the site visit, a disturbed area that was potentially used for landfill activities was observed. No additional information was provided in the government records search; however, during the interview process site personnel reconfirmed possible historical excavation activities in the area.

Opinion Regarding Environmental Liability

The Trion facility appears to be compliant with local and state regulations and there are no known ongoing non-compliance issues with relevant environmental laws and regulations and no significant potential future environmental, health, and safety (EHS) liabilities were observed material to Tomkins purchasing the property. However, information obtained during the interview process, government records review, and review of historical reports, supports the

RECs identified with the subject property from past operations that are potential liability concerns for Tomkins.

Signature of Environmental Professional

The signature of Mr. John Miller, Project Manager, is affixed on the title page of this report.

User Reliance

EQ is not engaged in environmental assessment and reporting for the purpose of advertising, sales promotion, or endorsement of any client's interests, including raising investment capital, recommending investment decisions, or other publicity purposes. The client acknowledges that this report has been prepared for the exclusive use of the client and agrees that EQ reports or correspondence will not be used or reproduced in full or in part for such purposes noted above, and may not be used or relied upon in any prospectus, offering circular, or similar document. Client also agrees that none of its advertising, sales promotion, or other publicity matter containing information obtained from this assessment and report will mention or imply the name of EQ.

Nothing contained in this report shall be construed as a warranty or affirmation by EQ that the site and property described are suitable collateral for any loan or that acquisition of such property by any lender through foreclosure proceedings or otherwise will not expose the lender to potential environmental liability.

SECTION1

INTRODUCTION

1.1 Overview and Approach

Environmental Quality Management, Inc. (EQ) completed a Phase I Environmental Business Site Assessment (ESA) of the Trion, Inc. facility located at 101 McNeill Road, Sanford, Lee County, North Carolina (the “subject property”). Figure 1-1 presents the site plan. The ESA was performed in anticipation of a financial transaction involving the Trion facility.

The objective of the assessment was to identify areas of environmental liabilities or other environmental issues of relevance associated with the subject property resulting from Whitin-Roberts past and Trion’s present on-site activities. The assessment focused on the environmental aspects of the site and its operations, and consisted of interviews with staff responsible for Environmental Health and Safety (EHS) at the site, a tour of the operation and storage areas, and the collection and review of relevant environmental documents and data. The interviews were conducted using Tomkins Law Department Due Diligence Audit Report Questionnaire as a basis for discussion.

The site visit was performed on December 20, 2007 by EQ’s assessor Mr. Bren Huggins. EQ was accompanied on the site visit by Mr. Jack Fallin, Production Manager, and Mr. Greg Hall, Maintenance Technician.

1.2 Scope of Services

This environmental assessment was conducted in conformance with the scope of work referenced in Tomkins Request for Proposal dated November 29, 2007, and with EQ’s proposal dated December 3, 2007. As a basic framework, EQ followed the American Society for Testing and Materials (ASTM) Standard E 1527-05, Standard Practice for Environmental Site Assessments; however, this report is not intended to address the standards for conducting all

appropriate inquiries set forth by the United States Environmental Protection Agency (USEPA) at 40 Code of Federal Regulations (CFR) Part 312 that are necessary to qualify for landowner liability protection under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

The assessment was conducted to evaluate and identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or to the subject property. EQ's Phase I EBDA sought to gather information regarding: (1) current and past property users and occupancies; (2) current and past users of hazardous substances and petroleum products; (3) waste management and disposal activities that could have caused a release or threatened release of hazardous substances; (4) current and past corrective actions and response activities to address past and ongoing releases of hazardous substances at the subject property; (5) engineering controls at the subject property; (6) institutional controls at the subject property; and (7) properties adjoining or located near the subject property that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the subject property. EQ's Phase I ESA included, as applicable:

- An on-site inspection of the subject property to evaluate current conditions and identify areas of potential concern.
- A review of property history through interviews and aerial photographs, city directories, ownership records, and historical mapping.
- Observation of adjacent properties and the local area to evaluate the potential for adverse environmental impact to the subject property.
- Interviews/research of local city/county, tribal, state, and federal records, including contracting of Environmental Data Resources, Inc. (EDR) or other environmental databases resources for that geological area to identify sites of concern as required in the regulatory records review section of the ASTM standards, where available.
- A preliminary asbestos assessment of the building(s) that included visible observations of readily accessible building areas but no sampling.

Appendix A presents photographs of the site and surrounding areas that were taken to document current conditions. Appendix B contains copies of Sanborn fire insurance maps, aerial photographs, topographic maps, and the city directory search. Appendix C presents previous

Phase I reports, property environmental records, or permits reasonably ascertainable at the time of the site visit. Appendix D contains a copy of the EDR database search. Appendix E is designated for special contractual conditions, if applicable. The Tomkins Law Department Due Diligence Audit Report completed by the EQ assessor and the site contacts is provided in Appendix F. Resumes of the Environmental Professionals are provided in Appendix G. .

1.3 Site Assessors

This assessment was conducted by Mr. Bren Huggins, Senior Environmental Assessor of EQ. Mr. Daniel Jelinek, Project Manager of EQ, reviewed the contents of this report. The professional qualifications for Mr. Huggins and Mr. Jelinek are included in Appendix G.

1.4 Interviewed Personnel

Table 1-1 presents a summary of personnel interviews.

TABLE 1-1. SUMMARY OF PERSONNEL INTERVIEWS

Source of Information	Subject Property	Adjacent Properties
Interview(s)	Mr. Jack Fallin, Production Manager, 24 years of service Mr. Greg Hall, Maintenance Technician, 15 years of service	Personnel of previous owner/operator were unavailable. The adjacent property is currently inactive and owner White Consolidated is reportedly in bankruptcy

1.4.1 Discussion Summary

Information obtained from the current site owner/operator and his representatives are discussed in various sections of this report. EQ’s interview with Mr. Jack Fallin indicated that chemical usage on site was limited to hydraulic oils, lubrication oils, cooling oils, commercial solvents such as methanol used for paint thinning and for wire cleaning in small quantities and Reliasolv™ thought to be used for spot cleaning. The material safety data sheet (MSDS) is

provided in Appendix C. These materials appear to be handled in accordance to state and federal regulations. However, it should be noted that the current RCRA waste storage area was historically used by Whitin-Roberts and is currently used by Trion, Inc. The condition of the concrete slab is dilapidated and cracked. Mr. Fallin was not aware of any USTs, spills, or other environmental problems at the subject property during Trions occupancy at the site. Mr. Fallin did mention that the previous site owner, Whitin-Roberts Inc., requested a permit from the North Carolina Department of Environment and Natural Resources and/or US EPA to install a landfill in the area of the pond. According to Mr.Fallin, the intended use of the pond was the disposal of black oxide plating residues. The permit was reportedly denied by one or both agencies; however, it was unknown to Mr. Fallin what activities were conducted at the proposed location.

SECTION 2

SITE DESCRIPTION AND OPERATIONS

2.1 Site Location and Description

Trion is located at 101 McNeill Road, Sanford, Lee County, North Carolina. The main building is one-story and is approximately 263,000 square feet and the property is approximately 25 acres. The building consists of office space, a loading dock, warehouse, and manufacturing space. Two unused trailers are located near the northeast corner of the building, and one small cinder block electrical building is located along the property line to the northeast of the building. The front of and south side of the main building has asphalt parking/driveway areas and landscaped areas. A paved (combination of asphalt and concrete) driveway, storage area, and loading dock are located to the rear, east side, of the main building. There is a grass and landscaped area along with a large pond located on the north side of the property. The site location map is provided Figure 2-1. The pond was reportedly never used by the facility, and was noted to exist prior to construction of the facility; however during the interviews it was suggested that the pond was constructed in anticipation of use by the facility. The location of the pond was also the same area that the previous owner attempted to permit for landfill activities, but was denied by the state and possible federal agencies.

2.1.1 Utilities

The facility is provided with:

- Water from City of Sanford Water Department.
- Sewer service from the City of Sanford Sewer Utilities collects the wastewater and it is treated at the City of Sanford Wastewater Treatment Plant.
- Electricity from Progress Energy
- Natural gas from Public Service Gas (PSNC)

According to Trion personnel, all utilities currently available were provided to the facility upon its construction.

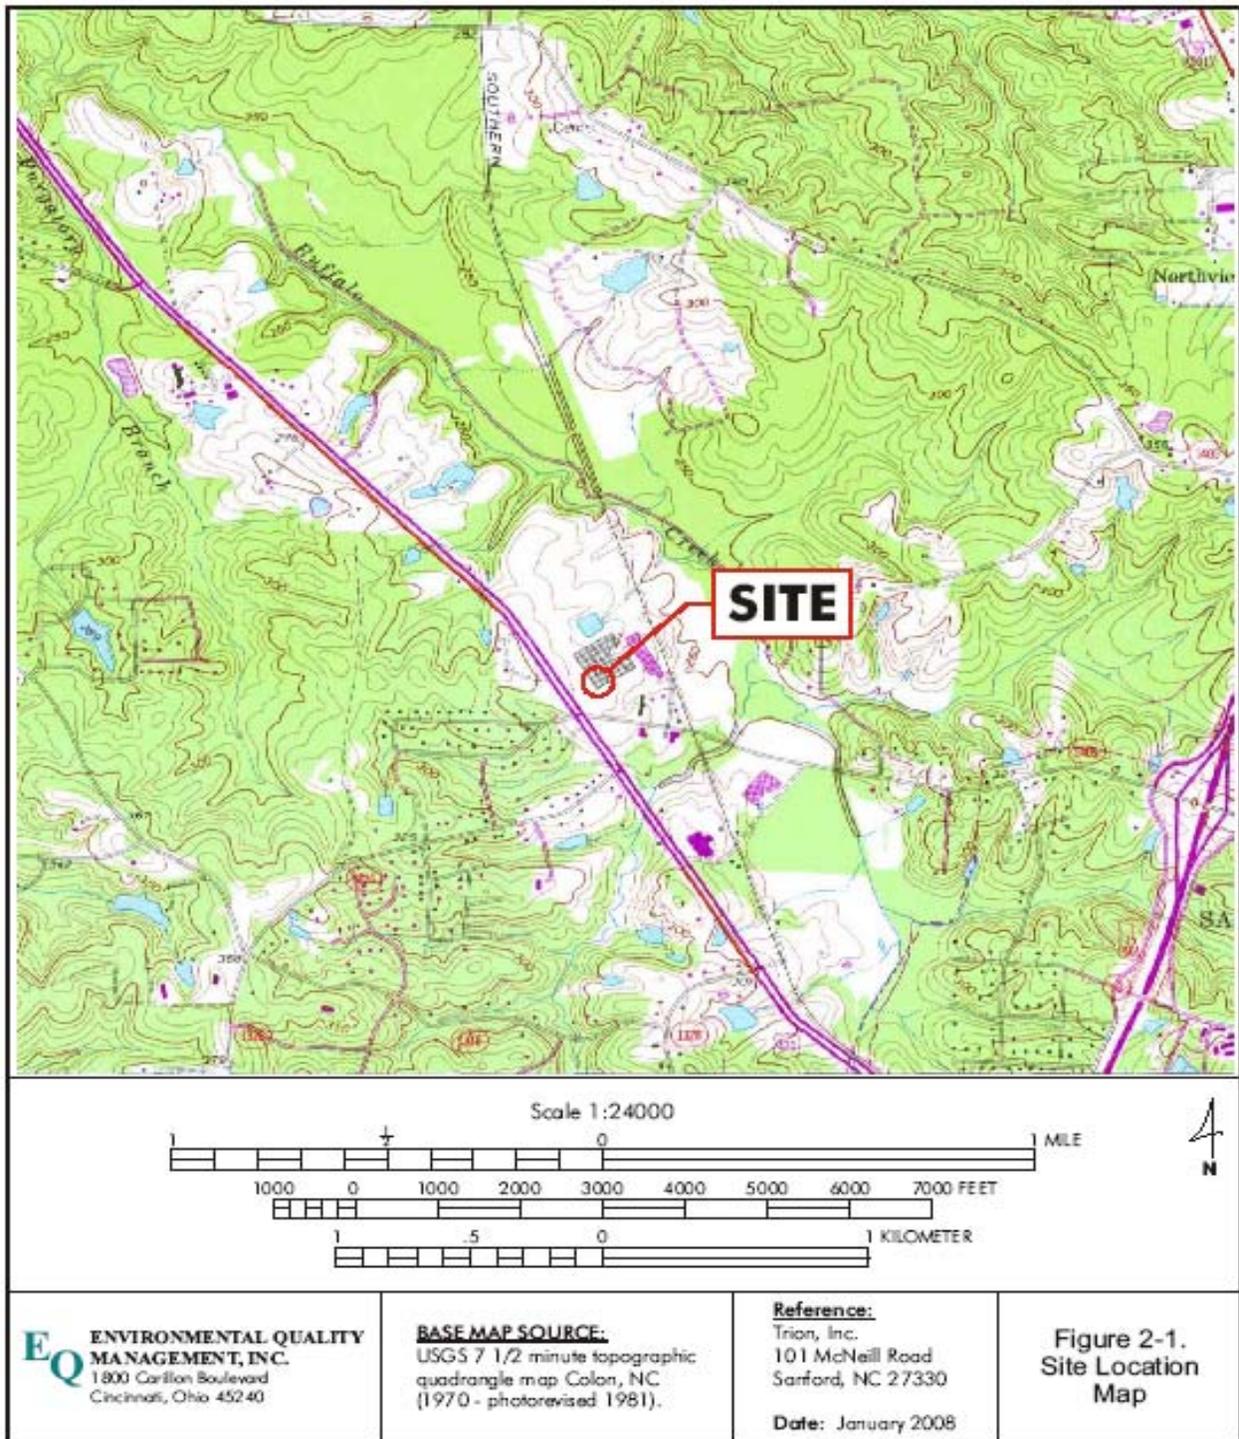

Figure 2-1. Site Location Map

2.1.2 Property Restrictions

According to facility personnel, no known restrictions are associated with the property currently being occupied. No other property limitations were identified in any supporting documentation researched by EQ.

2.2 Current and Historical Site Operations and Ownership

The subject property is currently owned and operated by Trion, Inc. Based on interviews with Mr. Fallin and Mr. Hall the current building was constructed in 1966, and used by Whitin Roberts, Co. (currently White Consolidated, Inc.) for manufacturing textile equipment from 1966 to 1984. Trion reportedly moved their operations to the 101 McNeill Road location in 1984. Trion uses the facility for manufacturing, assembly, and warehousing of electrostatic-type air cleaning equipment, with associated office space. Manufacturing operations consist of stamping and forming of parts, cleaning of certain parts prior to painting, painting (either by spray painting or powder coating), assembly, packaging of the air cleaning units, and warehousing prior to shipping.

The Tomkins Law Department Due Diligence Audit Report completed for the subject property show the area was farmland prior to 1966. A copy of the Audit Report is included in Appendix F.

2.3 Current and Historical Uses of Adjoining Properties

The subject property is located in area with other light industrial facilities. Land use in the area of the subject property includes light industrial, commercial, residential, and vacant land.

- North: Imperial Freezer Services LLC (33.75 acre land parcel)
- South: Residential development and PJA Inc. (approximately 2.5 acres)
- East: American Performance Industries, Inc. (2 parcels of approximately 6.25 and 6.46 acres each) and Southern Railway
- West: Frontier Spinning Mills Inc. (35.23 acre land parcel), Frontier Jet Spinning LLC (20.43 acre land parcel), and Glenwood Residential Subdivision

Prior to construction of the site and surrounding facilities, land use was agricultural farmland, undeveloped/wooded land, and a few scattered residential properties. A listing of current and surrounding property use from historical city directories is in Appendix B.

No visual evidence of environmental concerns was observed on the immediate surrounding properties except for the property located to the north. It was observed that possible excavation activities had occurred based on observing disturbed soil.

TABLE 2-1. SUMMARY OF HISTORICAL RECORDS REVIEWED

2.4 Environmental Setting

2.4.1 Topography and Hydrology

The subject property is located at an elevation of approximately 268 feet above mean sea level, and the general topographic gradient is to the west northwest, towards the rear of the property. The overall topographic (downward) trend of the surrounding area is to the northwest. Surface water drainage from the front of the building is directed towards a storm sewer catch basin located in the low area to the west side of the building. A small (less than one-foot deep and approximately 2-feet wide) grass lined drainage swale is located adjacent to the paved driveway south of the building. A small drainage swale is located in the northwestern corner of the property leading to the pond. Outflow from the pond is to the northeast to Buffalo Creek, located approximately 1,000 feet northeast of the subject property. According to the EDR report, the subject property is not located within wetland delineated areas or in the 100- or 500-year flood plain.

2.4.2 Geology and Hydrogeology

The subject property is located in the rock stratigraphic unit Mesozoic era Triassic system and series, which is characterized by stratified sequence.

The dominant soil type at the subject property has been classified as Mayodan, which is a sandy loam, in the Soil Survey of Lee County North Carolina. This soil type is classified as deep and moderately deep, moderately well and well drained with moderately coarse textures. The soil is well drained and has intermediate water holding capacity. The depth to the water table is more than six feet. This soil does not meet the requirements for a hydric soil.

An EDR Radius Map with GeoCheck® was obtained for the subject property, which provided soil layer information. A summary of the soil characteristics is presented in Table 2-1.

TABLE 2-2. Geological Profile

Layer	Soil Type	Thickness of Layer, inches	Description/Classification
1	Sandy loam	0-12	Granular materials, silty, or clayey gravel and sand.
2	Silty clay loam	12-18	Silt-clay materials, silty soils
3	Clay	18-47	Silt-clay materials, clayey soils
4	Variable	47-60	None reported

2.4.3 Potential Receptors

Because the subject property is located in a rural area the surrounding population density is low. The closest residence to the facility is at approximately one half mile and across a major thoroughfare.

Groundwater vulnerability is considered to be moderate due to the shallow groundwater level and the potential for open surface drains from sewer joints. During the site visit, it was observed that three to four drains that are currently in use were uncovered. Wash down water in the Paint Room discharges directly through one of these floor drains. Possible leakage to groundwater may lead to subsurface discharge to Buffalo Creek.

Buffalo Creek located to the north of the property is a potential surface water receptor and is considered to have moderate vulnerability.

SECTION 3

SITE AND OPERATIONS INFORMATION

3.1 Permits and Compliance

The facility appears to be in compliance with applicable environmental regulations and has applied for the required permits from the North Carolina Department of Environmental and Natural Resources (NCDENR).

- Air: The subject property has one paint booth (ES-09) that is used for solvent based coating, silk screening, and powder coating operations. This emission unit is a synthetic minor source (Permit Number 02050). The air permit expires January 31, 2008. A copy of the air permit is provided in Appendix C.
- Hazardous Waste: The facility generates between 220 and 2200 pounds of hazardous waste in a month. A Resource Conservation and Recovery Act (RCRA) identification number (NCD049843998) was obtained by the facility (non-transferable) a small-quantity generator (SQG). Hazardous waste continues to be stored in the original area and the current condition of the area is of concern. Furthermore, future closure of this storage area may be necessary due to its regulatory status.
- Stormwater: The facility does not maintain a stormwater discharge permit. All processes take place indoors and contamination to the stormwater is low to moderate.
- Wastewater: The subject property has a direct discharge wastewater permit (000013) that expires September 30, 2009. The facility's sanitary and process water is discharged to the City of Sanford public sewer system. The City of Sanford samples three locations on a biannual basis. Per EQs limited review, there are no recorded violations or other documents regarding non-compliance. A copy of the Industrial User Pretreatment Permit (IUP) is provided in Appendix C.

- Toxic Release Inventory (TRI): The facility is not required to submit annual TRI reports because it does not exceed any of the thresholds associated with the TRI program.

3.2 Wells

Facility personnel reported that the facility has been connected to the public sewer system since its construction and there are no known septic systems or dry wells on the property. EQ noted no obvious visual evidence of septic systems or dry wells on the property. During the 1999 Phase I ESA, a wellhead was documented. Further review of the reported wellhead, indicated that the area was utilized as a pumping station. Reportedly the water from the pond was pumped to a small orchard maintained by a former senior manager.

3.3 Aboveground Storage Tanks (AST)

According to Mr. Jack Fallin, the facility contains two aboveground storage tanks. One 500 gallon, steel above ground storage tank is located outside the northwestern side of the building. This AST is reportedly used to temporarily store waste oil, which is removed approximately every two month by a contracted vendor. The AST is located on a concrete pad, surrounded by a concrete block wall acting as a secondary containment. There was no staining or stressed vegetation outside the secondary containment. The concrete beneath the AST was stained, but there was no free oil visible.

In a 1999 Phase I ESA, an AST was identified as a small (approximately 30 gallon) rectangular, steel, wall-mounted tank. It was reportedly located on the northwest corner of the electrical building located along the eastern property line. During the site visit EQ did not observe an AST in this location.

3.4 Underground Storage Tanks (UST)

According to facility contacts, no USTs are currently located on the subject property, and no visual indication (i.e., fill ports, vents, fuel pumps) of the potential presence of USTs was noted by EQ during the site visit.

3.5 Indications of On-Site Contamination and Solid Waste Disposal Areas

No evidence of on-site waste disposal or indication of on-site contamination was noted during site reconnaissance of the subject property.

3.6 Pits, Ponds, and Lagoons

A large pond is located on the northern side of the facility. This pond was on site prior to 1966, when the building was constructed. There is historical evidence that the previous site owners may have intended the pond to be used as a landfill. No evidence shows that any land filling activities took place at the subject property. Trion has reportedly never used this pond as part of its operations. There were no indications of adverse impact to the pond (e.g. no sheen, staining, discoloration, odor, etc.).

The facility does not currently have any pits or lagoons. Nor is there any indication that any ever existed previously.

3.7 Sewers, Drains, and Sumps

Wastewater from the site is reportedly discharge to the City of Sanford sewer system. Based on the interview, there was never an on-site septic system associated with the subject property.

3.8 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were historically used in dielectric fluids and oils in a variety of electrical equipment such as transformers and capacitors and in hydraulic equipment. A transformer owned by the local electrical utility was observed outside the northwest side of the building. The transformer fluid was tested for PCBs by the utility company and it could not be determined if the transformer contained PCB fluids. No leakage was observed on the pad during the site visit. During the site interview with Mr. Fallin, it was noted that the transformers are owned and maintained by Progress Energy.

3.9 Asbestos Containing Materials

An asbestos survey was not performed as part of this Phase I ESA; however, potential friable ACMs were observed during the site visit in the Boiler Room. No determination was made to validate this assumption. Though requested, the Site Supervisor could not provide an intrusive or official, certified ACM survey. Based on the age of the building, there is potential for ACMs to exist in some building materials such as wall board, ceiling tile, floor tile, roofing materials, etc. An official ACM survey should be conducted by a qualified ACM inspector prior to conducting any renovation or demolition activities at the subject property.

3.10 Lead Paint

EQ did not conduct a lead-based paint (LBP) survey as part of this assessment. The subject property should employ precautionary measures during any demolition activities involving LBP surfaces.

SECTION 4

RECORDS REVIEW

4.1 Environmental Data Base Search – Federal and State

EQ contracted EDR to conduct a database search for agency records. The database report, presented in Appendix D, defines and summarizes the ASTM databases reviewed in the EDR report and notes if any sites (including the subject property) were identified in the specified radius. The locations of the sites identified in the EDR report were evaluated to determine which sites were located within the ASTM specified search distance from the subject property boundary. Only those sites within the ASTM-specified distances are discussed below.

It should be noted that the computerized geocoding technology used in the database search is based on available census data and is only accurate to approximately ± 300 feet. The EDR report provides a list of unmapped sites for which inadequate location information was provided. EQ has reviewed the list of “unmapped” sites to determine if these sites are within the study radius. If the “unmapped” sites appeared likely to be within the search radius for a specific database, they are discussed in the sections that follow.

Based on maps of the area, the required database search radius for a given database, and the site reconnaissance, it appears that none of the unmapped sites are within the designated search distances for each database.

Sites identified within the study radii were evaluated to determine if they are likely to have adversely impacted the subject property. The criteria used to evaluate the potential for adverse impact to the subject property include:

- Distance from the subject property.
- Expected depth and direction of groundwater and surface water flow.
- Expected storm water flow direction.
- Presence/absence of documented contaminant releases at the identified sites that have not been remedied to the satisfaction of regulators.

The identification of a site as potentially up gradient or down gradient is based on the expected direction of groundwater flow to the northwest.

4.1.1 Subject Property

The subject property was identified in the RCRA and FINDS databases.

- RCRA- The subject property is a SQG (small quantity generator) of hazardous waste. The subject property's RCRA identification number is NCD1000336916. The property generates between 220 pounds and 2200 pounds of hazardous waste per month. Historically there were four written informal violation pertaining to generator pre-transport requirements and general requirements issued between January 8, 1987 and December 18, 2001.
- FINDS is a unique identification number assigned to a facility by the Facility Index System. The subject property's FINDS identification number is NCD049843998.

4.1.2 Surrounding Property

The Nellie Gillis residence has two historical leaking underground storage tanks (LUSTs), the two will be referred to as A and B. Both are located to the west of the subject property approximately 1678 feet up gradient. These LUSTs are on located on a non-commercial property. LUST A was reported on March 16, 1995 with a suspected leak date of February 27, 1995 and LUST B was reported on January 5, 2001 with a suspected leak date of March 1, 1995. LUST A was a heating oil UST that was removed February 27, 1995 and the soil area the removed tank was treated in place using a bacteria/accelerator mixture and was reported as closed out on March 20, 1998. LUST B was removed on March 1, 1995 and no soil contamination was discovered during the removal of the tank. LUST B was reportedly closed on January 5, 2001. It is unlikely that there were any adverse impacts on the subject property because of either LUST A or B due to the distance from the subject property.

Spanco Industries located approximately 1742 feet southeast and down gradient from the subject property has a reported LUST. A notice of violation was issued for the LUST on November 11, 1991. Groundwater contamination was detected at Spanco. There is no information available on any groundwater cleanup efforts or if the tank was removed. It is not

likely that the Spanco LUST caused any adverse impacts at the subject property due to the distance the tank is from the subject property.

The Cox residence located approximately 2538 feet to the west-southwest and up gradient of the subject property, had a LUST that contained heat oil. The tank was removed on September 23, 2004 and the leaking was reported on April 16, 1997. Soil contamination was found during the tank removal, but there was no evidence of groundwater contamination. It is unlikely that the Cox LUST had an adverse impact on the subject property due to the distant from the subject property.

4.1.3 Unplottable Properties

The EDR database search cannot always accurately locate a facility in a given database due to poor or inadequate address information. It should be noted that the computerized geocoding technology used in the database search is based on available census data and is only accurate to approximately ± 300 feet. EDR has supplied a list of 30 unplottable sites (referred to as orphan sites) with an area address or zip code that cannot be mapped. Based on maps of the area, the required database search radius for a given database, and site reconnaissance, it is possible to determine if an unplottable site falls within the applicable ASTM search radii for the listed database or if the site may be removed from consideration.

EQ reviewed the list and concluded that all, except Whitin-Roberts, Co., of the unplottable sites were located outside applicable ASTM search radii and/or are listed in databases that would not necessarily indicate that they have impacted the environmental condition of the subject property. Whitin-Roberts was a textile equipment manufacturer located within a mile of the site. Table 4-1 presents the EDR database summary for surrounding properties.

TABLE 4-1. EDR DATABASE SUMMARY FOR SURROUNDING PROPERTIES

Database	Radius Searched	Sites Found
FEDERAL DATABASES		
National Priorities List (NPL) The NPL is EPA's list of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. In order to become an NPL site, a site must meet or surpass a predetermined hazard ranking score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the U.S. Department of Health and Human Services and the U.S. EPA.	1.0 mile	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) The CERCLIS list contains sites which are either proposed to or on the NPL and sites which are in the screening and assessment phase for possible inclusion on the NPL. The information on each site includes a history of all pre-remedial, remedial, removal, and community relation's activities or events at the site, financial funding information for the events, and unrestricted enforcement activities.	0.5 mile	0
CERCLIS-No Further Remedial Action Planned (NFRAP) NFRAP sites may be sites where, following an initial investigation, no contamination was found, was removed quickly, or was not serious enough to require Federal Superfund action or NPL consideration.	0.5 mile	0
Resource Conservation and Recovery Act Information System (RCRA Generator) RCRA small-quantity generators (SQG) are facilities which generate less than 1,000 kg/month of non-acutely hazardous waste. RCRA large generators (LQG) are facilities which generate at least 1,000 kg/month of non-acutely hazardous waste (or 1 kg/month of acutely hazardous waste).	0.25 mile	1 SQG-1
Resource Conservation and Recovery Act Information System – Treatment, Storage, or Disposal Facilities (RCRA - TSD) The EPA's RCRA Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment, or disposal of hazardous waste. RCRA TSDs are facilities which treat, store, and/or dispose of hazardous waste.	0.5 mile	0
Corrective Action Report (CORRACTS) Treatment, storage, or disposal facility subject to RCRA corrective action.	1.0 mile	0
Emergency Response Notification System (ERNS) The ERNS database is a national database containing records of reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the US Coast Guard, the National Response Center, and the DOT.	Subject Property	0
Solid Waste Facilities/Landfill (SWF/LF) This is a list prepared by the Michigan Department of Environmental Quality that provides an inventory of solid waste disposal facilities or landfills	0.5 mile	0
Registered Underground Storage Tanks (UST) This is a database of USTs that are registered in the state. USTs are regulated under Subtitle I of RCRA and must be registered with the state department responsible for administering the UST program.	0.25 mile	0
Leaking Underground Storage Tanks (LUST)		

This database includes cases that have or have had leaking USTs and other below-ground releases, leaking aboveground storage tanks, spills, and inspections.	0.5 mile	0
State Hazardous Waste Sites (SHWS) State hazardous waste site records are the states' equivalent to CERCLIS.	1.0 mile	0
Delisted State Hazardous Waste Sites (DEL SHWS) Sites that have been delisted or deleted from the list of Contaminated Sites.	1.0 mile	0

4.2 Pertinent Regulatory Agency Correspondence

EQ was able to obtain a copy of the facility air permit and industrial use permit which are provided in Appendix C. Additional property documentation such as title and deed information is also provided in Appendix C.

4.3 Environmental Reports and Investigations

A Phase I Environmental Site Assessment (ESA) was conducted by Roux Associates, Inc. of West Deptford, New Jersey in July 1999. Roux's assessment indicated a low potential for recognized environmental conditions in connection with the subject property. Drums of liquid raw materials and hazardous wastes were stored outside of the rear of the building during Roux's site inspection. Only minor staining on the concrete surrounding the drums was observed and general used, handling, and storage of hazardous substance appeared well managed, there is a potential for an impact to the environment in these areas, especially considering the outdoor storage areas are directly adjacent to unpaved areas. Roux recommended soils sampling in the area the drums are stored. EQ did not find evidence this testing was conducted during the site visit in December 2007.

SECTION 5

FINDINGS AND RECOMMENDATIONS

5.1 Liability and Risk Issues

EQ conducted a Phase I ESA at the subject property on December 20, 2007. Our conclusions and opinions are based on the scope of work described in Sections 1.1 and 1.2 of this report. A summary of EQ's conclusions and opinions is presented below.

Based on the data obtained during the site visit, the environmental database review, interviews with persons familiar with the subject property and its history, and the high significance of the identified data gaps no ASTM recognized environmental conditions (RECs) related to past or current operations on site were identified except for the following:

- Floor drains and subsurface piping were observed in the facility. Additionally, “terra-cotta” piping material was observed on the exterior of the facility which could be plumbed to the floor drains. This drain system and associated piping have been in place since 1966, from the original build. If the floor drains are connected to terra cotta, there is a potential for subsurface releases. During the site visit, visual deterioration of the floor drains was noted. Therefore, there is a potential that historical releases of cleaning solvents to the subsurface may have occurred during past operations.
- The Hazardous Waste Storage area located southeast portion of the main building has damaged and cracked concrete slab. The same area was utilized by the previous owner/operator from 1966 to 1984. It was reported that this area was sealed and cleaned per a 1999 Phase I ESA; however during the EQ site visit there were indications of sever cracking.
- The potential of asbestos containing material (ACM) may be present in the Boiler Room and the testing rooms located behind the main building. EQ did not conduct an asbestos survey; however, based on the history of the building ACM may be present.
- The pond located the northwest of the property. During the interview process it was discussed that the pond was possibly constructed during the construction of the main building; however, the water from the pond was never used for any type of processes.

According to current site personnel, the previous owner requested a landfill permit from the state and federal agencies. The landfill permit was denied. It was unknown whether during the permit process this location was used to temporarily store waste from manufacturing of textile equipment and the use of black oxide coating.

- Unknown activities associated with the adjacent property located to the east of the subject property. During the site visit, a disturbed area that was potentially used for landfill activities was observed. No additional information was provided in the government records search; however, during the interview process site personnel reconfirmed possible historical excavation activities in the area.

A REC is defined as “the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property, excluding de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

5.2 Data Gaps

Table 5-1 summarizes the data gaps identified during the site assessment. The significance of the data gaps with respect to the conclusions of this assessment is presented in Section 5.1. .

TABLE 5-1. Data Gap Summary

Data Gap	Sources Consulted to Address Data Gap	Significance^a
Interviews with former owners/operators were not conducted.	In lieu of the interviews and environmental questionnaire, EQ completed a Phase I EBDA and reviewed the Trion facility’s office records.	High
A Chain-of-Title was not provided for review by the client.	Historical environmental reports and information obtained during the interview process provided sufficient information.	Low

^aSignificance to identifying conditions indicative of releases or threatened releases to the subject property is rated from low to high.

SECTION 6

LIMITATIONS

The innocent landowner, contiguous owner, and prospective purchaser defenses to liability under the CERCLA require that a person acquiring property conduct an “all appropriate inquiry” with respect to the subject property. The objective of the assessment was to identify areas of environmental liabilities or other environmental issues of relevance associated with the subject property resulting from Trions’ past and present on-site activities.

This format deviates from that recommended in ASTM E1527-05 and is not intended to address all the elements of “all appropriate inquiry” necessary to qualify for landowner liability protection under CERCLA regulations per 40 CFR 312. Professional judgments expressed herein are based on the facts currently available within the limits of the existing data, the data gaps identified herein, scope of work, budget, and schedule. Results of this assessment are based on the visual site inspection of readily accessible areas of the subject property conducted by EQ personnel, information from interviews with knowledgeable persons regarding the site, information reviewed regarding historical uses, information provided by contacted regulatory agencies, and review of publicly available and practically reviewable information identifying current and historical uses of the property and surrounding properties. All conclusions and recommendations regarding the subject property represent the professional opinions of the EQ personnel involved with the project, and the results of this report should not be considered a legal interpretation of existing environmental regulations.

EQ assumes no responsibility or liability for errors in the public data utilized or developments resulting from situations outside the scope of this project. We make no warranties, expressed or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

North Carolina Department of Environment and Natural Resources
DIVISION OF AIR QUALITY

Michael F. Easley, Governor

William G. Ross Jr., Secretary
B. Keith Overcash, P.E., Director

February 7, 2003

Mr. Jack Fallin
Plant Engineer

Trion Inc
P O Box 760
Sanford, NC 27331

Subject: Air Permit No. 02050R08
Trion Inc
Sanford, Lee County, North Carolina
Fee Class: Small
Site Number: 05/53/00049

Dear Mr. Fallin:

In accordance with your completed application received January 6, 2003, we are forwarding herewith Permit No. 02050R08 to Trion Inc, Sanford, Lee County, North Carolina for the construction and operation of air emissions sources or air cleaning devices and appurtenances. Additionally, any emissions activities determined from your air permit application as meeting the exemption requirements contained in 15A NCAC 2Q .0102 or 15A NCAC 2Q .0503 have been listed for information purposes as an "ATTACHMENT" to the enclosed air permit. Please note the records retention requirements are contained in General Condition 2 of the General Conditions and Limitations.

If any parts, requirements, or limitations contained in this permit are unacceptable to you, you have the right to request a formal adjudicatory hearing within 30 days following receipt of this permit, identifying the specific issues to be contested. Such a request will stay the effectiveness of the entire permit. This hearing request must be in the form of a written petition, conforming to G.S. 150B-23 of the North Carolina General Statutes, and filed with the Office of Administrative Hearings, 6714 Mail Service Center, Raleigh, NC 27699-6714. The form for requesting a formal adjudicatory hearing may be obtained upon request from the Office of Administrative Hearings. Unless a request for a hearing is made pursuant to G.S. 150B-23, this air permit shall be final and binding.

You may request modification of your air permit through informal means pursuant to G.S. 150B-22. This request must be submitted in writing to the Director and must identify the specific

Page 2

provisions or issues for which the modification is sought. Please note that the permit will become final and binding regardless of a request for informal modification unless a request for a hearing is also made under G.S. 150B-23.

Unless exempted by a condition of this permit or the regulations, construction of new air pollution sources or air cleaning devices, or modifications to the sources or air cleaning devices described in this permit must be covered under a permit issued by the Division of Air Quality prior to construction. Failure to do so is a violation of G.S. 143-215.108 and may subject the Permittee to civil or criminal penalties as described in G.S. 143-215.114A and 143-215.114B.

This permit shall be effective from February 7, 2003 until January 31, 2008, is nontransferable to future owners and operators, and shall be subject to the conditions and limitations as specified therein.

Should you have any questions concerning this matter, please contact Joseph Voelker at (919) 571-4700.

Sincerely,

Ernie Fuller
Regional Air Quality Supervisor

AIR PERMIT NO. 02050R08

Issue Date: February 7, 2003

Effective Date: February 7, 2003

Expiration Date: January 31, 2008

Replaces Permit: 02050R07

To construct and operate air emission source(s) and/or air cleaning device(s), and for the discharge of the associated air contaminants into the atmosphere in accordance with the provisions of Article 21B of Chapter 143, General Statutes of North Carolina (NCGS) as amended, and other applicable Laws, Rules and Regulations,

Trion Inc
101 McNeill Road
Sanford, Lee County, North Carolina
Fee Class: Small
Site Number: 05/53/00049

(the Permittee) is hereby authorized to construct and operate the air emissions sources and/or air cleaning devices and appurtenances described below:

Emission Source ID	Emission Source Description	Control System ID	Control System Description
One solvent-based coating operation consisting of:			
ES-09	double dry filter paint booth	N/A	N/A

in accordance with the completed application 5300049.02A received January 6, 2003 including any plans, specifications, previous applications, and other supporting data, all of which are filed with the Department of Environment and Natural Resources, Division of Air Quality (DAQ) and are incorporated as part of this permit.

This permit is subject to the following specified conditions and limitations including any TESTING, REPORTING, OR MONITORING REQUIREMENTS:

A. SPECIFIC CONDITIONS AND LIMITATIONS

1. Any air emission sources or control devices authorized to construct and operate above must be operated and maintained in accordance with the provisions contained herein. The Permittee shall comply with applicable Environmental Management Commission

Regulations, including Title 15A North Carolina Administrative Code (NCAC), Subchapter 2D .0202, 2D .0515, 2D .0521, 2D .0535, 2D .0958 and 2D .1806.

2. EMISSION INVENTORY REQUIREMENT - At least 90 days prior to the expiration date of this permit, the Permittee shall submit the air pollution emission inventory report in accordance with 15A NCAC 2D .0202, pursuant to N.C. General Statute 143 215.65. The report shall be submitted to the Regional Supervisor, DAQ. The report shall document air pollutants emitted for the 2006 calendar year. The Regional Office will send information on how to submit the emissions inventory, along with a reminder to renew your permit, about six months prior to your permit expiration. If you do not receive this information, please contact the Regional Supervisor, DAQ.
3. PARTICULATE CONTROL REQUIREMENT - As required by 15A NCAC 2D .0515 "Particulates from Miscellaneous Industrial Processes," particulate matter emissions from the emission sources shall not exceed allowable emission rates. The allowable emission rates are, as defined in 15A NCAC 2D .0515, a function of the process weight rate and shall be determined by the following equation(s), where P is the process throughput rate in tons per hour (tons/hr) and E is the allowable emission rate in pounds per hour (lbs/hr).
$$E = 4.10 * (P)^{0.67} \quad \text{for } P \leq 30 \text{ tons/hr, or}$$
$$E = 55 * (P)^{0.11} - 40 \quad \text{for } P > 30 \text{ tons/hr}$$
4. VISIBLE EMISSIONS CONTROL REQUIREMENT - As required by 15A NCAC 2D .0521 "Control of Visible Emissions," visible emissions from the emission sources, manufactured after July 1, 1971, shall not be more than 20 percent opacity when averaged over a six-minute period, except that six-minute periods averaging not more than 87 percent opacity may occur not more than once in any hour nor more than four times in any 24-hour period. However, sources which must comply with 15A NCAC 2D .0524 "New Source Performance Standards" or .1110 "National Emission Standards for Hazardous Air Pollutants" must comply with applicable visible emissions requirements contained therein.
5. NOTIFICATION REQUIREMENT - As required by 15A NCAC 2D .0535, the Permittee of a source of excess emissions that last for more than four hours and that results from a malfunction, a breakdown of process or control equipment or any other abnormal conditions, shall:
 - a. Notify the Director or his designee of any such occurrence by 9:00 a.m. Eastern time of the Division's next business day of becoming aware of the occurrence and describe:
 - i. the name and location of the facility,
 - ii. the nature and cause of the malfunction or breakdown,
 - iii. the time when the malfunction or breakdown is first observed,
 - iv. the expected duration, and

- v. an estimated rate of emissions.
- b. Notify the Director or his designee immediately when the corrective measures have been accomplished.

This reporting requirement does not allow the operation of the facility in excess of Environmental Management Commission Regulations.

6. WORK PRACTICES REQUIREMENTS - As required by 15A NCAC 2D .0958(c) "~~Work Practices for Sources of Volatile Organic Compounds,~~" the Permittee shall adhere to the following required work practices:

- a. The Permittee shall store all VOC-containing material not in use (including waste material) in containers covered with a tightly fitting lid that is free of cracks, holes, or other defects.
- b. The Permittee shall clean up spills as soon as possible following proper safety procedures.
- c. The Permittee shall store wipe rags in closed containers.
- d. The Permittee shall not clean sponges, fabric, wood, paper products, and other absorbent materials.
- e. The Permittee shall drain solvents used to clean supply lines and other coating equipment into closable containers and close containers immediately after each use.
- f. The Permittee shall clean mixing, blending, and manufacturing vats and containers by adding cleaning solvent, closing the vat or container before agitating the cleaning solvent.
- g. The Permittee shall pour spent cleaning solvent into closable containers and close containers immediately after each use.

7. CONTROL AND PROHIBITION OF ODOROUS EMISSIONS - As required by 15A NCAC 2D .1806 "Control and Prohibition of Odorous Emissions" the Permittee shall not operate the facility without implementing management practices or installing and operating odor control equipment sufficient to prevent odorous emissions from the facility from causing or contributing to objectionable odors beyond the facility's boundary.

B. GENERAL CONDITIONS AND LIMITATIONS

1. REPORTS, TEST DATA, MONITORING DATA, NOTIFICATIONS, AND REQUESTS FOR RENEWAL shall be submitted to the:

Ernie Fuller
Regional Air Quality Supervisor
North Carolina Division of Air Quality
Raleigh Regional Office
3800 Barrett Drive, Suite 101
Raleigh, NC 27609
(919) 571-4700

2. RECORDS RETENTION REQUIREMENT - Any records required by the conditions of this permit shall be kept on site and made available to DAQ personnel for inspection upon request. These records shall be maintained in a form suitable and readily available for expeditious inspection and review. These records must be kept on site for a minimum of 2 years, unless another time period is otherwise specified.
3. PERMIT RENEWAL REQUIREMENT - The Permittee, at least 90 days prior to the expiration date of this permit, shall request permit renewal by letter in accordance with 15A NCAC 2Q .0304(d) and (f). Pursuant to 15A NCAC 2Q .0203(i), no permit application fee is required for renewal of an existing air permit. The renewal request should be submitted to the Regional Supervisor, DAQ.
4. ANNUAL FEE PAYMENT - Pursuant to 15A NCAC 2Q .0203(a), the Permittee shall pay the annual permit fee within 30 days of being billed by the DAQ. Failure to pay the fee in a timely manner will cause the DAQ to initiate action to revoke the permit.
5. EQUIPMENT RELOCATION - A new air permit shall be obtained by the Permittee prior to establishing, building, erecting, using, or operating the emission sources or air cleaning equipment at a site or location not specified in this permit.
6. This permit is subject to revocation or modification by the DAQ upon a determination that information contained in the application or presented in the support thereof is incorrect, conditions under which this permit was granted have changed, or violations of conditions contained in this permit have occurred. The facility shall be properly operated and maintained at all times in a manner that will effect an overall reduction in air pollution. Unless otherwise specified by this permit, no emission source may be operated without the concurrent operation of its associated air cleaning device(s) and appurtenances.
7. REPORTING REQUIREMENT - Any of the following that would result in previously unpermitted, new, or increased emissions must be reported to the Regional Supervisor, DAQ:
- a. changes in the information submitted in the application regarding facility emissions;
 - b. changes that modify equipment or processes of existing permitted facilities; or

- c. changes in the quantity or quality of materials processed.

If appropriate, modifications to the permit may then be made by the DAQ to reflect any necessary changes in the permit conditions. In no case are any new or increased emissions allowed that will cause a violation of the emission limitations specified herein.

8. This permit is nontransferable by the Permittee. Future owners and operators must obtain a new air permit from the DAQ.

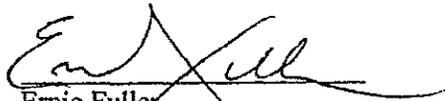

9. This issuance of this permit in no way absolves the Permittee of liability for any potential civil penalties which may be assessed for violations of State law which have occurred prior to the effective date of this permit.
10. This permit does not relieve the Permittee of the responsibility of complying with all applicable requirements of any Federal, State, or Local water quality or land quality control authority.
11. Reports on the operation and maintenance of the facility shall be submitted by the Permittee to the Regional Supervisor, DAQ at such intervals and in such form and detail as may be required by the DAQ. Information required in such reports may include, but is not limited to, process weight rates, firing rates, hours of operation, and preventive maintenance schedules.
12. A violation of any term or condition of this permit shall subject the Permittee to enforcement pursuant to G.S. 143-215.114A, 143-215.114B, and 143-215.114C, including assessment of civil and/or criminal penalties.
13. Pursuant to North Carolina General Statute 143-215.3(a)(2), no person shall refuse entry or access to any authorized representative of the DAQ who requests entry or access for purposes of inspection, and who presents appropriate credentials, nor shall any person obstruct, hamper, or interfere with any such representative while in the process of carrying out his official duties. Refusal of entry or access may constitute grounds for permit revocation and assessment of civil penalties.
14. The Permittee must comply with any applicable Federal, State, or Local requirements governing the handling, disposal, or incineration of hazardous, solid, or medical wastes, including the Resource Conservation and Recovery Act (RCRA) administered by the Division of Waste Management.
15. PERMIT RETENTION REQUIREMENT - The Permittee shall retain a current copy of the air permit at the site. The Permittee must make available to personnel of the DAQ, upon request, the current copy of the air permit for the site.
16. CLEAN AIR ACT SECTION 112(r) REQUIREMENTS - Pursuant to 40 CFR Part 68 "Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(r)," if the Permittee is required to develop and register a risk management plan pursuant to Section 112(r) of the Federal Clean Air Act, then the Permittee is required to register this plan in accordance with 40 CFR Part 68.

Permit No. 02050R08
Page 3

17. PREVENTION OF ACCIDENTAL RELEASES - GENERAL DUTY - Pursuant to Title I Part A Section 112(r)(1) of the Clean Air Act "Hazardous Air Pollutants - Prevention of Accidental Releases - Purpose and General Duty," although a risk management plan may not be required, if the Permittee produces, processes, handles, or stores any amount of a listed hazardous substance, the Permittee has a general duty to take such steps as are necessary to prevent the accidental release of such substance and to minimize the consequences of any release. **This condition is federally-enforceable only.**

Permit issued this the 7th of February, 2003.

1. Because an activity is exempted from being required to have a permit or permit modification does not mean that the activity is exempted from an applicable requirement or that the owner or operator of the source is exempted from demonstrating compliance with any applicable requirement.
2. When applicable, emissions from stationary source activities identified above shall be included in determining compliance with the permit requirements for toxic air pollutants under 15A NCAC 2D .1100 "Control of Toxic Air Pollutants" or 2Q .0711 "Emission Rates Requiring a Permit."

PERMIT

Industrial User Pretreatment Permit (IUP)
To Discharge Wastewater Under the
Industrial Pretreatment Program

000013	433, 467
IUP Number	40 CFR Category

In compliance with the provisions of North Carolina General Statute 143-215.1, any applicable federal categorical pretreatment regulations, all other lawful standards and regulations promulgated and adopted by the North Carolina Environmental Management Commission, and the City of Sanford Sewer Use Ordinance. The following Industry, hereafter referred to by name or as the permittee:

Industry name, permittee: TRION INC.
Facility located at Street Address: 101 McNeill Road
City: Sanford,
State, Zip: North Carolina 27331-0760

is hereby authorized to discharge wastewater from the facility located at the above listed address into the sanitary sewer collection system and the wastewater treatment facility of the Control Authority listed below:

IUP Control Authority WWTP name: CITY OF SANFORD BIG BUFFALO CREEK WWTP
NPDES Number: NC0024147
WWTP Address: 5327 Iron Furnace Road
City, State, Zip: Sanford, North Carolina 27331-3729

in accordance with effluent limitations, monitoring requirements, and all other conditions set forth in Parts I, II, and III of this Industrial User Pretreatment Permit (IUP).

Effective date, this permit and the authorization to discharge shall become effective at midnight on this date: October 1, 2004
Expiration date, this permit and the authorization to discharge shall expire at midnight on this date: September 30, 2009

9-19-04

WASTEWATER MANAGEMENT FACILITY

MAE LOFTON
Pretreatment Coordinator

October 15, 2007

Mr. Jack Fallin
Production Manager
Trion, Incorporated
PO Box 760
Sanford, NC 27331-0760

Subject: Wastewater Monitoring Report

Dear Mr. Fallin:

The, July-December 2007, sampling event(s) conducted, September 10 through 14, indicated that with the exception of a flow excursion Trion's discharge was within the established limitations recorded in Industrial Pretreatment Permit No # 000013. Daily flow results are assessed semiannually for compliance.

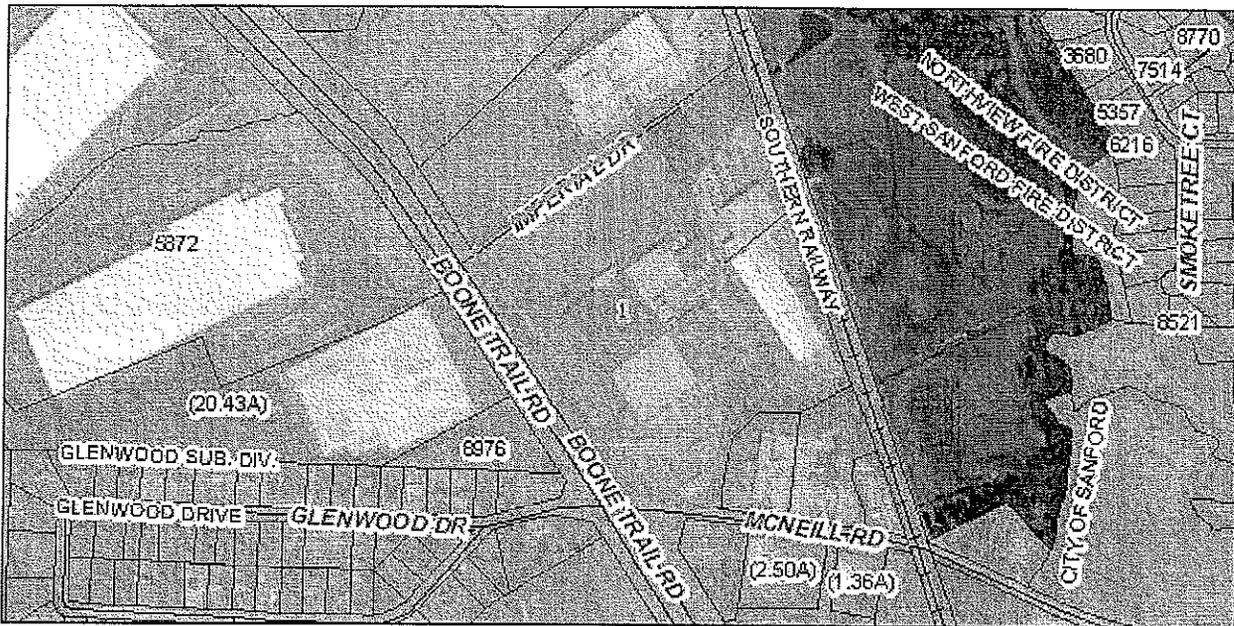

Samples were collected in accordance with the Significant Industrial User Permit, Pretreatment Regulations and the City of Sanford Sewer Use Ordinance. Samples were analyzed in a Certified Laboratory using approved methodology. Results are recorded on the Laboratory Services Sheet.

If there are question about the above information, please feel free to call me at 775-8305.

Sincerely,
City of Sanford

A handwritten signature in cursive script that reads "Mae Lofton".

NORTH CAROLINA GENERAL WARRANTY DEED

THIS DEED made this 28th day of September 19 93 , by and between

GRANTOR

GRANTEE

GARY R. LONG and wife,
ANN L. LONG

TRION, INC.
P. O. Box 760
Sanford, NC 27330

Enter in appropriate block for each party; name, address, and, if appropriate, character of entity, e.g. corporation or partnership.

The designation Grantor and Grantee as used herein shall include said parties, their heirs, successors, and assigns, and shall include singular, plural, masculine, feminine or neuter as required by context.

WITNESSETH, that the Grantor, for a valuable consideration paid by the Grantee, the receipt of which is hereby acknowledged, has and by these presents does grant, bargain, sell and convey unto the Grantee in fee simple, all that certain lot or parcel of land situated in the City of Sanford West Sanford Township, Lee County, North Carolina and more particularly described as follows:

BEGINNING at a point, which point is marked by an iron pipe, and which point is also in the easterly margin of the 80 foot right-of-way of Shannon Drive, and which point is also a common corner between the subject tract and the tract belonging, now or formerly, to Lamar Beach and running thence North 72 degrees 36 minutes 44 seconds East 250.00 feet to an iron pipe; thence North 81 degrees 34 minutes 31 seconds East 583.73 feet to an iron pipe; thence North 10 degrees 39 minutes 34 seconds West 588.53 feet to an iron pipe; thence South 81 degrees 43 minutes 21 seconds West 522.52 feet to an iron pipe; thence South 03 degrees 36 minutes 42 seconds East 224.28 feet to a point; thence South 3 degrees 31 minutes 41 seconds East 239.88 feet to an iron pipe; thence South 72 degrees 36 minutes 44 seconds West 252.00 feet to an iron pipe in the Easterly margin of the said Shannon Drive; thence with the Easterly margin of the said Shannon Drive South 18 degrees 40 minutes 47 seconds East 129.22 feet to the point of the beginning, being a tract containing 8.26 acres all as more fully shown on a survey entitled "Survey for Gary R. Long and wife, Ann L. Long" which survey is prepared by Robert J. Bracken, R.L.S., and which survey is dated June 8, 1991.

ROBERT W. PATTERSON and wife,
CECELIA K. PATTERSON
2004 Shannon Drive
Sanford, NC 27330

Enter in appropriate block for each party; name, address, and, if appropriate, character of entity, e.g. corporation or partnership.

The designation Grantor and Grantee as used herein shall include said parties, their heirs, successors, and assigns, and shall include singular, plural, masculine, feminine or neuter as required by context.

WITNESSETH, that the Grantor, for a valuable consideration paid by the Grantee, the receipt of which is hereby acknowledged, has and by these presents does grant, bargain, sell and convey unto the Grantee in fee simple, all that certain lot or parcel of land situated in the City of Sanford, West Sanford Township, Lee County, North Carolina and more particularly described as follows:

BEGINNING at a point, which point is marked by an iron pipe, and which point is also in the easterly margin of the 60 foot right-of-way of Shannon Drive, and which point is also a common corner between the subject tract and the tract belonging, now or formerly, to Lamar Beach and running thence North 72 degrees 36 minutes 44 seconds East 250.00 feet to an iron pipe; thence North 81 degrees 34 minutes 31 seconds East 563.73 feet to an iron pipe; thence North 10 degrees 39 minutes 34 seconds West 588.53 feet to an iron pipe; thence South 81 degrees 43 minutes 21 seconds West 522.52 feet to an iron pipe; thence South 03 degrees 36 minutes 42 seconds East 224.28 feet to a point; thence South 3 degrees 31 minutes 41 seconds East 239.88 feet to an iron pipe; thence South 72 degrees 36 minutes 44 seconds West 252.00 feet to an iron pipe in the Easterly margin of the said Shannon Drive; thence with the Easterly margin of the said Shannon Drive South 18 degrees 40 minutes 47 seconds East 129.22 feet to the point of the beginning, being a tract containing 8.26 acres all as more fully shown on a survey entitled "Survey for Robert W. Patterson and wife, Cecelia K. Patterson" dated January 25, 1994, prepared by Robert J. Bracken, RLS. Reference to said survey is hereby made for a greater certainty of description.

ML 10-Thomas

BOOK 525 PAGE 62

The property hereinabove described was acquired by Grantor by instrument recorded in
Book 514, Page 8, Lee County Registry.

A map showing the above described property is recorded in Plat Book page
TO HAVE AND TO HOLD the aforesaid lot or parcel of land and all privileges and appurtenances thereto belonging to
the Grantee in fee simple.

And the Grantor covenants with the Grantee, that Grantor is seized of the premises in fee simple, has the right to convey
the same in fee simple, that title is marketable and free and clear of all encumbrances, and that Grantor will warrant and
defend the title against the lawful claims of all persons whomsoever except for the exceptions hereinafter stated,
Title to the property hereinabove described is subject to the following exceptions:

IN WITNESS WHEREOF, the Grantor has hereunto set his hand and seal, or if corporate, has caused this instrument to be signed in its
corporate name by its duly authorized officers and its seal to be hereunto affixed by authority of its Board of Directors, the day and year first
above written.

NELLIE W. THOMAS
REGISTER OF DEEDS

FIRST AMENDMENT TO DEED OF TRUST AND SECURITY AGREEMENT

THIS FIRST AMENDMENT TO DEED OF TRUST AND SECURITY AGREEMENT (this "Amendment") is made and entered into as of November 3, 1995, by and between TRION, INC., a Pennsylvania corporation ("Grantor"); NEW SALEM, INC., a North Carolina corporation ("Trustee"); and WACHOVIA BANK OF NORTH CAROLINA, NATIONAL ASSOCIATION, a national banking association ("Beneficiary").

RECITALS

A. In order to provide security for its obligations under a Reimbursement and Security Agreement dated as of October 1, 1995 (the "Reimbursement Agreement"), with the Beneficiary, Grantor executed and delivered a Deed of Trust and Security Agreement dated as of October 1, 1995 (the "Deed of Trust"), to Trustee, for the benefit of Beneficiary, which Deed of Trust was recorded on October 25, 1995, in Book 566, Page 167, office of the Lee County Register of Deeds, and encumbers the property described therein.

B. Grantor and Beneficiary desire to amend the Deed of Trust on the terms and conditions set forth below.

STATEMENT OF AGREEMENT

NOW, THEREFORE, FOR AND IN CONSIDERATION of the sum of Ten and 00/100 Dollars (\$10.00) in hand paid to each party hereto, and other good and valuable considerations, the receipt and sufficiency of which are hereby acknowledged, the parties do hereby agree as follows:

1. Amendment of Due on Sale Event of Default. Paragraph 10(e) of the Deed of Trust is hereby deleted and the following is substituted therefor:

(e) Any sale, transfer, lease or conveyance, whether voluntary or involuntary, of the Property or any portion thereof or interest therein, except the sale, trade-in or other disposition of any of the Equipment which Grantor determines has become obsolete, worn out, unsuitable or unnecessary.

2. Security. Nothing contained in this Amendment shall in any way impair the security now held for the Obligations (as defined in the Deed of Trust), nor shall it waive, nullify, vary or affect any provision, condition, covenant or agreement contained in the Deed of Trust, except as expressly provided herein. Except as expressly modified herein, the Deed of Trust is hereby ratified and shall remain in full force and effect. Nothing herein contained shall be construed as a substitution or novation of the Obligations (as defined in the Deed of Trust) or of the instruments evidencing, governing or securing the Obligations, which shall remain in full force and effect, except as modified by this Amendment.

IN WITNESS WHEREOF, Grantor, Trustee and Beneficiary have caused this instrument to be executed under seal by their duly authorized officers as of the date first written above.

DRIVEWAY EASEMENT

'96 MAY 30 AM 11 51

LEE COUNTY

This Agreement is made this 29th day of May, 1996, by and between Trion, Inc., a North Carolina Corporation (hereinafter referred to as "Trion"), and Imperial Services, LLC, a North Carolina Limited Liability Company (hereinafter referred to as "Imperial").

WITNESSETH:

Whereas, Trion is the owner of certain property including approximately 25 acres located in West Sanford Township, Lee County, North Carolina, and more particularly described by Deed recorded in Book 356, Page 698, Lee County Registry (hereinafter referred to as the "Trion Tract"); and whereas, Imperial is the owner of certain property adjacent to the Trion Tract including 34.306 acres more particularly described by Deed recorded in Book 577, Page 128, Lee County Registry (hereinafter referred to as the "Imperial Tract"); and whereas, Trion has agreed to the granting of an access easement across a portion of the Trion Tract for the purpose of servicing the Imperial Tract subject to the terms hereof.

NOW, THEREFORE, in consideration of the sum of Ten and No/100 Dollars (\$10.00) and other good and valuable consideration, including the mutual promises and covenants contained herein, Trion does hereby give, grant, and convey unto Imperial, its successors and assigns, a perpetual appurtenant easement for a driveway over and across the following property located in West Sanford Township, Lee County, North Carolina, and more particularly described as follows;

Beginning at a point marked by a concrete monument in the eastern right of way line of U.S. Highway 421, intersection of the southwest corner of Imperial (Book 577, Page 128, Lee County Registry) and the northwest corner of Trion (Book 356, Page 698, Lee County Registry); thence from the point of beginning along the eastern right of way line of U.S. Highway 421 South 33 deg. 57 min. 03 sec. East 43.89 feet to a point marked by a concrete monument; thence departing the eastern right of way line of U.S. Highway 421 North 55 deg. 44 min. 00 min. East 75.23 feet to a point marked by an iron; thence North 38 deg. 57 min. 45 sec. East 151.24 feet to a point marked by an iron in the southern line of Imperial; thence along the southern line of Imperial South 55 deg. 43 min. 41 sec. West 219.83 feet to the point and place of beginning.

To have and to hold said easement to Imperial, its successors and assigns, for its non-exclusive use appurtenant to the Imperial Tract for purposes of ingress, egress and regress, to Imperial, its successors and assigns in title, as owners of the Imperial Tract, to run with said land in perpetuity, subject to the following terms;

1. Imperial shall obtain, prior to the construction of the driveway, the written approval of Trion with regard to the design of and materials to be used in the driveway. Trion's consent shall not be unreasonably withheld.
2. Imperial shall bear the cost of constructing and maintaining the driveway including

RELOCATION OF _____ PAGE _____
SEWER EASEMENT

95 MAY 30 AM 11 52

This Agreement is made this 28th day of May, 1996, by and between Trion, Inc., a North Carolina Corporation (hereinafter referred to as "Trion"), and Imperial Services, LLC, a North Carolina Limited Liability Company (hereinafter referred to as "Imperial").

WITNESSETH:

Whereas, Trion is the owner of certain property including approximately 25 acres located in West Sanford Township, Lee County, North Carolina, and more particularly described by Deed recorded in Book 356, Page 698, Lee County Registry (hereinafter referred to as the "Trion Tract"); and whereas, Imperial is the owner of certain property lying adjacent to the Trion Tract including 34.306 acres more particularly described by Deed recorded in Book 577, Page 128, Lee County Registry (hereinafter referred to as the "Imperial Tract"); and whereas, Trion has agreed to the relocation of a sewer easement located on the Imperial Tract servicing the Trion Tract subject to the terms hereof.

NOW, THEREFORE, in consideration of the sum of Ten and No/100 Dollars (\$10.00) and other good and valuable consideration, including the mutual promises and covenants contained herein Trion does hereby agree that Imperial, at the sole expense of Imperial, may relocate the existing sewer line currently servicing the Trion Tract which runs across the Imperial Tract from its existing location to a new location and to be twenty(20) feet in width, more particularly described as follows (hereinafter referred to as the "New Sewer Easement");

See Exhibit A attached hereto and incorporated herein by reference.

Imperial does hereby give, grant, and convey unto Trion a perpetual appurtenant easement for installation, maintenance and operation of a sewer line within the twenty(20) foot wide New Sewer Easement described above, to have and to hold to Trion, its successors and assigns in title, in perpetuity, to run with the land of Trion, said sewer relocation being subject to the following conditions;

1. In relocating the sewer line Trion's sewer service shall not be interrupted, the new sewer line to be complete and operational before the old sewer line is disconnected.
2. Trion shall have the right to approve the design of the new sewer line to assure itself that there will be no loss of quality of use of the existing sewer and Imperial hereby warrants and upon request, shall provide an engineer's certification of such, that the new sewerline shall not result in any loss in quality of the sewer service to the Trion Tract and that no additional pumping or other special arrangements will be required of Trion with the new sewerline than is currently required with the existing sewerline. In addition, Imperial shall be responsible for obtaining all governmental approvals for the design, location and use (including connection and commencement of operation) for the new sewer line.
3. Upon the new sewer line being completed, fully operational and hooked into the existing Trion sewer line (as certified to Trion by the engineer Imperial is using to supervise said sewer relocation), Trion does hereby agree that it waives any and all right to locate a sewer line

where the old sewer line existed or anywhere else on the Imperial Tract other than within the New Sewer Easement or the City of Sanford easement, any rights and easements for a sewer line of Trion to be within the New Sewer Easement described herein or within that easement to the City of Sanford for a sewer line described by instrument recorded in Book 351, Page 833, Lee County Registry.

4. Imperial agrees that it will indemnify Trion and hold Trion harmless for any loss, cost, damage or harm, including Trion's reasonable attorney's fees, due to the relocation of the sewer line, including any damage caused by any interruption of sewer service or for any environmental liability ensuing from said sewerline relocation.

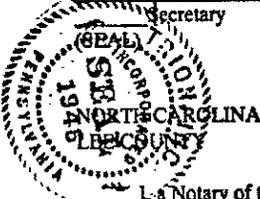

5. Either party hereto shall have the right to dedicate the sewer line easement to the City of Sanford or other appropriate governmental entity for public purposes.

In Witness Whereof, the parties hereto do hereby set their hands and seals this the day and year first above written.

REGISTER OF DEEDS
LEE COUNTY, N.C.

SECOND AMENDMENT TO DEED OF TRUST AND SECURITY AGREEMENT

THIS SECOND AMENDMENT TO DEED OF TRUST (this "Amendment") is made and entered into this 14 day of June, 1996, by and between TRION, INC., a Pennsylvania corporation ("Grantor"); NEW SALEM, INC., a North Carolina corporation ("Trustee"); and WACHOVIA BANK OF NORTH CAROLINA, NATIONAL ASSOCIATION, a national banking association ("Beneficiary").

RECITALS

A. In order to provide security for its obligations under a Reimbursement and Security Agreement dated October 1, 1995 (the "Reimbursement Agreement"), with the Beneficiary, Grantor executed and delivered a Deed of Trust and Security Agreement dated as of October 1, 1995 (the "Original Deed of Trust") to Trustee, which Original Deed of Trust was recorded on October 22, 1995, in Book 566, Page 167, office of the Lee County Register of Deeds, and encumbers the property described therein (the "Trion Property").

B. The Original Deed of Trust was amended by a First Amendment to Deed of Trust and Security Agreement dated as of November 3, 1995 (the "First Amendment"), which First Amendment was recorded on January 17, 1996, in Book 571, Page 530, office of the Lee County Register of Deeds (the Original Deed of Trust and the First Amendment to be hereinafter collectively referred to as the "Deed of Trust").

C. Imperial Freezer Services, LLC ("Imperial") has conveyed to Grantor a perpetual appurtenant easement for a sewer line across property owned by Imperial that is adjacent to the Trion Property pursuant to a Relocation of Sewer Easement Agreement dated May 28, 1996 ("Easement"), which Easement was recorded on May 30, 1996, in Book 581, Page 549, in the office of the Lee County Register of Deeds.

D. The parties hereto desire to amend the Deed of Trust by adding the Easement to the description of the property encumbered by the Deed of Trust.

STATEMENT OF AGREEMENT

NOW, THEREFORE, FOR AND IN CONSIDERATION of the sum of Ten and 00/100 Dollars (\$10.00) in hand paid to each party hereto, and other good and valuable considerations, the receipt and sufficiency of which are hereby acknowledged, the parties do hereby agree as follows:

1. Modification of Deed of Trust.

The Deed of Trust is hereby modified and amended by deleting Exhibit A attached to the Deed of Trust and substituting in its place the attached Exhibit A-1. For valuable consideration, Grantor hereby grants and conveys to Trustee, his successors and assigns, all of Grantor's right, title and interest in and to the tract or parcel of land described on the attached Exhibit A-1, including all of its right, title and interest in and to the buildings, structures, other improvements and equipment located on the real property described on Exhibit A-1 attached hereto.

TO HAVE AND TO HOLD all of the property set forth on Exhibit A-1 attached hereto and the rights hereby and heretofore granted, for the use and benefit of Trustee, its successors and assigns in fee simple, upon the trust and for the uses and purposes hereinafter set forth or as set forth in the Deed of Trust.

2. Security.

Nothing contained in this Amendment shall in any way impair the security now held for the Obligations (as defined in the Deed of Trust), nor shall it waive, nullify, vary or affect any provision, condition, covenant or agreement contained in the Deed of Trust, except as expressly provided herein. Except as expressly modified herein, the Deed of Trust is hereby ratified and shall remain in full force and effect. Nothing herein contained shall be construed as a substitution or novation of the Obligations (as defined in the Deed of Trust) or of the instruments evidencing, governing or securing the Obligations, which shall remain in full force and effect, except as modified by this Amendment.

3. Binding Effect.

The provisions of this Amendment shall be binding upon, and shall inure to the benefit of, the parties hereto and their respective successors and assigns.

IN WITNESS WHEREOF, the parties have executed this Second Amendment to Deed of Trust and Security Agreement under seal by their duly authorized officers as of the day and year first above written.

DEED OF RELEASE

GRANTOR: WACHOVIA BANK, NATIONAL ASSOCIATION, as
Administrative Agent

OTHER PARTIES: TRION, INC.

DATED: as of March 20, 2007

Drawn By: Otterbourg, Steindler, Houston & Rosen P.C.
230 Park Avenue
New York, New York 10169
Attn: Daniel P. Greenstein, Esq.

Mail To: Otterbourg, Steindler, Houston & Rosen P.C.
230 Park Avenue
New York, New York 10169
Attn: Daniel P. Greenstein, Esq.

DEED OF RELEASE

THIS DEED OF RELEASE is made and entered into as of March 20, 2007, by and between **CHICAGO TITLE INSURANCE COMPANY**, acting as trustee or substitute trustee (the "Trustee") and **WACHOVIA BANK, NATIONAL ASSOCIATION**, as **Administrative Agent** ("Beneficiary").

Grantee is the present beneficiary under the terms of that certain Deed of Trust, Assignment of Leases and Rents, Security Agreement and Fixture Filing (the "Deed of Trust"), executed by Trion, Inc. ("Grantor"), dated as of October 19, 2006 and recorded on December 15, 2006 in Book 01061, Page 0510, in the Office of the Register of Deeds, Lee County, North Carolina pursuant to which Grantor granted for the benefit of Beneficiary a lien on certain real property, improvements and other related property located in Lee County, North Carolina as set forth in the Deed of Trust and described on Exhibit A attached hereto (the "Property"). The Trustee is presently serving as trustee or substitute trustee under the terms of the Deed of Trust. Grantor has requested Grantee and the Trustee to release the Property from the lien of the Deed of Trust, and Grantee has agreed to do so and has requested the Trustee to join in this release.

Now, therefore, for and in consideration of the sum of Ten Dollars and other good and valuable consideration, the receipt of which is hereby acknowledged, Grantee and the Trustee have remised and released and by this instrument do remise, release and forever quitclaim unto the Grantor, its heirs and assigns, the Property, to have and to hold the same to said Grantor, its heirs and assigns, free and discharged from the lien of the Deed of Trust described above. This Deed of Release does not evidence the satisfaction any of the Obligations (as such term is defined in the Deed of Trust) and is without prejudice to Grantee's rights to collect the Obligations from Grantor or from any and all other persons or entities obligated thereon or from any and all other collateral granted to or held by Grantee, except for the Property released hereby.

This Deed of Release may be executed in one or more counterparts, each of which shall be an original, but all of which shall constitute one and the same instrument.

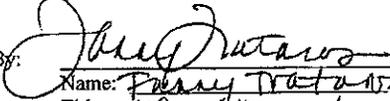

[THE REMAINDER OF THIS PAGE HAS BEEN LEFT INTENTIONALLY BLANK]

IN WITNESS WHEREOF, each of the undersigned has hereunto set his or her hand or caused this Deed of Release to be signed in its name by a person or persons duly authorized, all effective as of the date of this Deed of Release.

NORTH CAROLINA GENERAL WARRANTY DEED

THIS DEED made this 20 day of June, 1984, by and between

GRANTOR

WHITE CONSOLIDATED INDUSTRIES, INC., a corporation
 11770 Berea Road
 Cleveland, Ohio 44111

GRANTEE

TRION, INC., a corporation
 P. O. Box 760
 Sanford, North Carolina 27330

Enter in appropriate block for each party; name, address, and, if appropriate, character of entity, e.g. corporation or partnership.

The designation Grantor and Grantee as used herein shall include said parties, their heirs, successors, and assigns, and shall include singular, plural, masculine, feminine or neuter as required by context.

WITNESSETH, that the Grantor, for a valuable consideration paid by the Grantee, the receipt of which is hereby acknowledged, has and by these presents does grant, bargain, sell and convey unto the Grantee in fee simple, all that certain lot or parcel of land situated in the City of Sanford, West Sanford Township, Lee County, North Carolina and more particularly described as follows:

BEGINNING at a concrete monument, said stake being in the northern right-of-way line of McNeill Road, also identified as Secondary Road 1405, at that point where said right-of-way intersects with the eastern right-of-way line of U. S. 421; thence, with the northern right-of-way line of McNeill Road (SR 1405) S. 82 degrees 07 minutes 54 seconds East 361.58 feet to an iron pipe; thence North 10 degrees 40 minutes 10 seconds East 220.69 feet to a point, said point being identified by a P. K. Nail; thence North 13 degrees 31 minutes 35 seconds East 141.58 feet to an iron stake; thence North 35 degrees 39 minutes 10 seconds East 62.66 feet to an iron stake, said stake set at the edge of the pavement of the Whitin-Roberts driveway; thence North 50 degrees 03 minutes 41 seconds East 229.57 feet to an iron stake; thence North 26 degrees 37 minutes 28 seconds West 102.80 feet to an iron stake; thence North 55 degrees 43 minutes 21 seconds East 21.03 feet to a P.K. nail in the pavement; thence North 32 degrees 43 minutes 12 seconds West 374.56 feet to a point, said point being identified by a P.K. nail in pavement; thence North 34 degrees 09 minutes 29 seconds West 249.92 feet to an iron pipe; thence North 55 degrees 54 minutes 35 seconds East 37.02 feet to an iron pipe; thence North 34 degrees 11 minutes 53 seconds West 425.94 feet to an iron pipe; thence South 55 degrees 43 minutes 59 seconds West 677.83 feet to an iron pipe; thence South 55 degrees 43 minutes 59 seconds West 219.84 feet to an iron pipe, said iron pipe being located in the eastern right-of-way line of U. S. 421; thence South 33 degrees 57 minutes 03 seconds East 43.89 feet with the eastern right-of-way line of U. S. 421 to a concrete monument identifying said right-of-way line; thence, with said right of way, South 34 degrees 12 minutes 46 seconds East 1,161.12 feet to a concrete monument, said concrete monument being the point of BEGINNING, and being that property described on a survey entitled "Land Survey Whitin-Roberts Company" prepared by John D. Dixon, dated November 23, 1983, and including 25.170 acres according to said survey.

N.C. AL. ASSOC. Form No. 1-1976, Revised © 1977 - James Williams & Co., Inc. Box 121, Yorkville, N. C. 27055
 Adopted by Agreement with the N. C. Bar Assoc. - 1981

The property hereinabove described was acquired by Grantor by instrument recorded in

A map showing the above described property is recorded in Plat Book page

TO HAVE AND TO HOLD the aforesaid lot or parcel of land and all privileges and appurtenances thereto belonging to the Grantee in fee simple.

And the Grantor covenants with the Grantee that Grantor is seized of the premises in fee simple, has the right to convey the same in fee simple, that title is marketable and free and clear of all encumbrances, and that Grantor will warrant and defend the title against the lawful claims of all persons whomsoever except for the exceptions hereinafter stated.

Title to the property hereinabove described is subject to the following exceptions:

1. Easement granted to City of Sanford by instrument recorded in Book 351, page 831, Lee County Registry.
2. Easement granted to Carolina Power & Light Co by instruments recorded in Book 355, page 327; Book 104, page 439 and in Map Book 7, page 484, Lee Co. Reg.
3. Easement for right of way granted State Highway Commission by instrument recorded in Book 120, pages 614, 617 and 619, Lee Co. Reg.
4. Easement granted to Hains Telephone Company by instrument recorded in Book 122, page 11, Lee Co. Registry.

IN WITNESS WHEREOF, the Grantor has hereunto set his hand and seal, or if corporate, has caused this instrument to be signed in its corporate name by its duly authorized officers and its seal to be hereunto affixed by authority of its Board of Directors, the day and year first above written.

1983 and became known as White Consolidated Industries, Inc.

ALPHA RELIASOLV 564 CLEANER AND ROSIN REMOVER

DESCRIPTION

Alpha Reliasolv 564 cleaner and Rosin Flux Remover is a special blend of electronic grade, organic solvents. It is fast, efficient removal agent for rosin flux residues and other organic and inorganic contaminants.

USES

Bi-polar solvency characteristics make this an excellent solvent for removing non-polar residues such as rosins, resins, waxes, greases and oils. It also has the ability to remove polar and ionic residues, such as the residues of acidic activators used in fluxes. These can include amine hydro-chlorides and organic acids as well as inorganic activators such as zinc chloride. In addition it can be used to remove traces of etchants, such as ferric chloride and cupric chloride, left on the PCB from prior processing operations.

Reliasolv 564 can be used for room temperature and elevated temperature immersion and ultrasonic cleaning and is designed primarily for inline cleaning of printed circuits. As well as use as a flux remover it can also be used as a pre-cleaner prior to such processes as etching, coating and fluxing.

PHYSICAL PROPERTIES

Reliasolv 564 is considerably less toxic than carbon tetrachloride although slightly more toxic than alcohol. It should be used in a well ventilated area. Its distinct odour helps to prevent the undetected accumulation of vapour.

The narrow boiling range enables the cleaner to act for practical purposes as an azeotrope. The 8°C boiling range of Reliasolv 564 is half the published range of 1,1,1 - trichloroethane (methyl chloroform).

A low evaporation rate makes Reliasolv 564 more desirable than 1,1,1 - trichloroethane and considerably more economical. Comparisons have shown the evaporation rate to be 20-50% less.

Corrosion tests performed in accordance with U.S. Federal Specification 0-T-236 indicate less copper corrosion with Reliasolv 564 than with trichloroethane. The same results are obtained in the presence of 5% (wt./vol.) of rosin using other metals, such as tin/lead and stainless steel.

PHYSICAL PROPERTIES Cont...

Specific Gravity (gm./cc) @ 25°C	1.54 ± 0.010
pH of aqueous extract	7.5 ± 1.0
Appearance	Clear (to be confirmed)
Boiling Point	118°C
Freezing Point	0°C
Solubility of Water in Solvent (g/100cc)	0.1

TECHNICAL SUPPORT

For enquiries, assistance and support, contact Technical Services, Alpha Metals U.K.
Telephone : 0181-665 6666 Fax : 0181-665 4737

PACKAGING

Reliasolv 564 rosin flux remover is available in 20 litre and 200 litre drums.

HANDLING AND SAFETY

Use with adequate ventilation in a no-smoking area. Avoid contact with skin and eyes, if necessary wear protective gloves and goggles. To carry out a full COSHH assessment consult the product Material Safety Data Sheet.

Rev 4/96

2. INGREDIENT AND EXPOSURE LIMIT INFORMATION

CHEMICAL NAME	CAS #	% W/W	OSHA PEL - TWA
TETRACHLOROETHYLENE	127-18-4	80 - 90	100 ppm TWA; C 200 ppm

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW: SEVERE EYE IRRITANT.
NOT COMBUSTIBLE
TOXIC BY INHALATION.
MODERATE GASTROINTESTINAL TRACT IRRITANT.
MODERATE RESPIRATORY TRACT IRRITANT.
CAUSES SEVERE SKIN IRRITATION

HMIS RATING SYSTEM:
Health: 3 ; Flammability: 0 ; Reactivity: 0 ; Protection: B

NFPA RATING SYSTEM:
PERCHLOROETHYLENE health-2; flammability-0; reactivity-0

ROUTES OF ENTRY: INHALATION; INGESTION; SKIN CONTACT; EYE CONTACT
TARGET ORGANS: EYES
MEDICAL CONDITIONS AGGRAVATED: EYE DISEASE

IMMEDIATE (ACUTE) SYMPTOMS OVER-EXPOSURE BY ROUTE OF EXPOSURE:
INHALATION: CAN CAUSE MODERATE RESPIRATORY IRRITATION, DIZZINESS, WEAKNESS, FATIGUE, NAUSEA AND HEADACHE. MAY CAUSE AN ALLERGIC REACTION. MAY CAUSE RESPIRATORY TRACT SENSITIZATION, CHARACTERIZED BY ASTHMA-LIKE SYMPTOMS.
EYES: CAN CAUSE SEVERE IRRITATION. EYE CONTACT MAY RESULT IN CORNEAL INJURY. SYMPTOMS MAY INCLUDE DISCOMFORT OR PAIN, EXCESS BLINKING AND TEAR PRODUCTION, WITH MARKED REDNESS AND SWELLING OF THE CONJUNCTIVA. TEMPORARY VISION IMPAIRMENT (CLOUDY OR BLURRED VISION) IS POSSIBLE.
SKIN CONTACT: CAN CAUSE SEVERE IRRITATION, DEFATTING, AND DERMATITIS. IRRITATION EFFECTS MAY LAST FOR HOURS OR DAYS BUT WILL NOT LIKELY RESULT IN PERMANENT DAMAGE.
SKIN ABSORPTION: NO ABSORPTION HAZARD IN NORMAL INDUSTRIAL USE.

MATERIAL SAFETY DATA SHEET

3. HAZARDS IDENTIFICATION (Cont.)

INGESTION: IRRITATING TO MOUTH, THROAT, AND STOMACH. CAN CAUSE ABDOMINAL DISCOMFORT, NAUSEA, VOMITING AND DIARRHEA.

LONG TERM (CHRONIC) HEALTH EFFECTS:

CARCINOGENICITY: NONE OF THE SUBSTANCES HAVE BEEN SHOWN TO CAUSE CANCER IN LONG TERM ANIMAL STUDIES. NOT A CARCINOGEN ACCORDING TO NTP, IARC, OR OSHA.

REPRODUCTION: NO DATA AVAILABLE TO INDICATE PRODUCT OR ANY COMPONENTS PRESENT AT GREATER THAN 0.1% MAY CAUSE BIRTH DEFECTS. WOMEN OF CHILD BEARING AGE SHOULD AVOID EXPOSURE TO LEAD AND ITS INORGANIC COMPOUNDS DUE TO POST-NATAL EFFECTS.

4. FIRST AID MEASURES

SKIN EXPOSURE: WASH WITH SOAP AND WATER. REMOVE CONTAMINATED CLOTHING, LAUNDRER IMMEDIATELY, AND DISCARD CONTAMINATED LEATHER GOODS. GET MEDICAL ATTENTION IMMEDIATELY.

EYE EXPOSURE: IMMEDIATELY FLUSH EYES WITH PLENTY OF WATER FOR AT LEAST 20 MINUTES RETRACTING EYELIDS OFTEN. TILT THE HEAD TO PREVENT CHEMICAL FROM TRANSFERRING TO THE UNCONTAMINATED EYE. GET IMMEDIATE MEDICAL ATTENTION AND MONITOR THE EYE DAILY AS ADVISED BY YOUR PHYSICIAN.

INHALATION: REMOVE TO FRESH AIR. IF BREATHING IS DIFFICULT, HAVE A TRAINED INDIVIDUAL ADMINISTER OXYGEN. IF NOT BREATHING, GIVE ARTIFICIAL RESPIRATION AND HAVE A TRAINED INDIVIDUAL ADMINISTER OXYGEN. GET MEDICAL ATTENTION IMMEDIATELY

INGESTION: DO NOT INDUCE VOMITING AND SEEK MEDICAL ATTENTION IMMEDIATELY. DRINK TWO GLASSES OF WATER OR MILK TO DILUTE. PROVIDE MEDICAL CARE PROVIDER WITH THIS MSDS.

NOTES TO DOCTOR: NO ADDITIONAL FIRST AID INFORMATION AVAILABLE

5. FIRE FIGHTING MEASURES

FLAMMABILITY SUMMARY: NOT COMBUSTIBLE

FLASH POINT: 1000 deg. C

AUTOIGNITION TEMPERATURE: N/E deg. C

EXPLOSIVE LIMITS % IN AIR: N/E /

EXTINGUISHING MEDIA: NOT COMBUSTIBLE. USE EXTINGUISHING MEDIA APPROPRIATE FOR SURROUNDING FIRE.

FIRE AND EXPLOSION HAZARDS: MATERIAL WILL NOT IGNITE OR BURN.

FIRE FIGHTING METHODS: WILL NOT BURN, NO SPECIAL INSTRUCTIONS AVAILABLE. USE METHODS APPROPRIATE FOR SURROUNDING MATERIALS.

HAZARDOUS COMBUSTION PRODUCTS: CARBON MONOXIDE, CARBON DIOXIDE

MATERIAL SAFETY DATA SHEET

6. ACCIDENTAL RELEASE MEASURES

PRECAUTIONS AND EQUIPMENT: EXPOSURE TO THE SPILLED MATERIAL MAY BE SEVERELY IRRITATING OR TOXIC. FOLLOW PERSONAL PROTECTIVE EQUIPMENT RECOMMENDATIONS FOUND IN SECTION VIII OF THIS MSDS. PERSONAL PROTECTIVE EQUIPMENT NEEDS MUST BE EVALUATED BASED ON INFORMATION PROVIDED ON THIS SHEET AND THE SPECIAL CIRCUMSTANCES CREATED BY THE SPILL INCLUDING; THE MATERIAL SPILLED, THE QUANTITY OF THE SPILL, THE AREA IN WHICH THE SPILL OCCURRED, AND THE EXPERTISE OF EMPLOYEES IN THE AREA RESPONDING TO THE SPILL. NEVER EXCEED ANY OCCUPATIONAL EXPOSURE LIMITS.

METHODS FOR CLEAN-UP: PREVENT THE SPREAD OF ANY SPILL TO MINIMIZE HARM TO HUMAN HEALTH AND THE ENVIRONMENT IF SAFE TO DO SO. WEAR COMPLETE AND PROPER PERSONAL PROTECTIVE EQUIPMENT FOLLOWING THE RECOMMENDATION OF SECTION VIII AT A MINIMUM. DIKE WITH SUITABLE ABSORBENT MATERIAL LIKE GRANULATED CLAY. GATHER AND STORE IN A SEALED CONTAINER PENDING A WASTE DISPOSAL EVALUATION.

7. HANDLING AND STORAGE

HANDLING MEASURES: TOXIC OR SEVERELY IRRITATING MATERIAL. AVOID CONTACTING AND AVOID BREATHING THE MATERIAL. USE ONLY IN A WELL VENTILATED AREA.

STORAGE MEASURES: NO SPECIAL REQUIREMENTS

8. EXPOSURE CONTROLS AND PERSONAL PROTECTION

ENGINEERING MEASURES: USE LOCAL EXHAUST VENTILATION OR OTHER ENGINEERING CONTROLS TO MINIMIZE EXPOSURES AND MAINTAIN OPERATOR COMFORT.

RESPIRATORY PROTECTION: RESPIRATORY PROTECTION MAY BE REQUIRED TO AVOID OVEREXPOSURE WHEN HANDLING THIS PRODUCT. GENERAL OR LOCAL EXHAUST VENTILATION IS THE PREFERRED MEANS OF PROTECTION. USE A RESPIRATOR IF GENERAL ROOM VENTILATION IS NOT AVAILABLE OR SUFFICIENT TO ELIMINATE SYMPTOMS.

EYE PROTECTION: WEAR CHEMICALLY RESISTANT SAFETY GLASSES WITH SIDE SHIELDS WHEN HANDLING THIS PRODUCT. WEAR ADDITIONAL EYE PROTECTION SUCH AS CHEMICAL SPLASH GOGGLES AND/OR FACE SHIELD WHEN THE POSSIBILITY EXISTS FOR EYE CONTACT WITH SPLASHING OR SPRAYING LIQUID, OR AIRBORNE MATERIAL. DO NOT WEAR CONTACT LENSES. HAVE

MATERIAL SAFETY DATA SHEET

8. EXPOSURE CONTROLS AND PERSONAL PROTECTION (Cont.)

SKIN PROTECTION: AN EYE WASH STATION AVAILABLE.
AVOID SKIN CONTACT BY WEARING CHEMICALLY RESISTANT GLOVES, AN FORMON AND OTHER PROTECTIVE EQUIPMENT DEPENDING UPON CONDITIONS OF USE. INSPECT GLOVES FOR CHEMICAL BREAK-THROUGH AND REPLACE AT REGULAR INTERVALS. CLEAN PROTECTIVE EQUIPMENT REGULARLY. WASH HANDS AND OTHER EXPOSED AREAS WITH MILD SOAP AND WATER BEFORE EATING, DRINKING, AND WHEN LEAVING WORK.

GLOVES: NO INFORMATION AVAILABLE

CONTROL PARAMETERS:	-----ACGIH EXPOSURE LIMITS-----		
CHEMICAL NAME	TLV-TWA	STEL	CEILING
TETRACHLOROETHYLENE	25 ppm TWA; 170 mg/m3 TWA	100 ppm STEL; 685 mg/m3 STEL	

9. PHYSICAL AND CHEMICAL PROPERTIES

ODOR: NONE
pH: N/A
SPECIFIC GRAVITY: 1.4370
SOLUBILITY IN WATER: NOT DETERMINED
VAPOR PRESSURE, mm Hg at 20C:
MELTING POINT or RANGE (C):
BOILING POINT (C): 121

10. STABILITY AND REACTIVITY

INCOMPATIBLE MATERIALS: STRONG OXIDIZING AGENTS
CONDITIONS TO AVOID: NONE KNOWN

11. TOXICOLOGICAL INFORMATION

COMPONENT TOXICOLOGY DATA (NIOSH)
CHEMICAL NAME LD50/LC50
ETHYLENE, TETRACHLORO- Inhalation LC50 Rat : 34200 mg/m3/8H;
Inhalation LC50 Mouse : 5200 ppm/4H;
Oral LD50 Rat : 2629 mg/kg; Oral LD50 Mouse : 8100 mg/kg

MATERIAL SAFETY DATA SHEET

12. ECOLOGICAL INFORMATION

OVERVIEW: THIS MATERIAL IS NOT EXPECTED TO BE HARMFUL TO THE ECOLOGY.

13. DISPOSAL CONSIDERATIONS

WASTE DESCRIPTION: SPENT OR DISCARDED MATERIAL IS NON-HAZARDOUS ACCORDING TO ENVIRONMENTAL REGULATIONS.
DISPOSAL METHODS: DISPOSE OF IN A LANDFILL. DISPOSAL IS NOT LIKELY TO BE REGULATED.

14. TRANSPORT INFORMATION

TOXIC LIQUIDS, ORGANIC, N.O.S.
(TETRACHLOROETHYLENE)
6.1, UN2810, P.G. III

15. REGULATORY INFORMATION

TSCA STATUS: ALL COMPONENTS OF THIS PRODUCT ARE LISTED ON THE TSCA INVENTORY OF EXISTING CHEMICAL SUBSTANCES.

REGULATED CHEMICALS:

CHEMICAL NAME		REGULATION
TETRACHLOROETHYLENE (PERCHLOROETHYLENE)	127-18-4	SARA 313
TETRACHLOROETHYLENE (PERCHLOROETHYLENE)	127-18-4	CA PROP 65

CERCLA REGULATED CHEMICALS AND REPORTABLE QUANTITY (RQ):

TETRACHLOROETHYLENE	127-18-4	final RQ = 100 pounds (45.4 kg) as Ethene, tetrachloro-; also 1 Tetrachloroethene; also listed Tetrachloroethylene
---------------------	----------	--

16. OTHER INFORMATION

The information contained herein is based on data considered accurate. However, no warranty is expressed or implied regarding the accuracy of these data or the results to be obtained from the use thereof. Additionally, Alpha Metals, Inc. assumes no responsibility for injury to the vendee or third persons proximately caused by the material even if reasonable safety

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE AND LOCAL RECORDS

IMD: Incident Management Database.

A review of the IMD list, as provided by EDR, and dated 07/21/2006 has revealed that there are 4 IMD sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NC-FITS (North Carolina - Facility Identification Template For States) is North Carolina Department of Environment and Natural Resources' (NCDENR) Facility Identification Template for States that provides a common facility identifier in order to improve accessibility to comprehensive information about environmental regulated entities in the state of North Carolina.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/18/2007	Source: EPA
Date Data Arrived at EDR: 08/03/2007	Telephone: N/A
Date Made Active in Reports: 08/29/2007	Last EDR Contact: 07/31/2007

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/27/2007	Source: EPA
Date Data Arrived at EDR: 08/29/2007	Telephone: N/A
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 08/29/2007

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 11/15/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 02/18/2008
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007	Source: EPA
Date Data Arrived at EDR: 06/20/2007	Telephone: 703-412-9810
Date Made Active in Reports: 08/29/2007	Last EDR Contact: 12/06/2007
Number of Days to Update: 70	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/21/2007	Source: EPA
Date Data Arrived at EDR: 07/23/2007	Telephone: 703-412-9810

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 06/20/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/09/2007	Telephone: 202-566-2777

	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/08/2006	Telephone: 505-845-0011

	Data Release Frequency: Varies

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Inactive Hazardous Sites Inventory

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 07/12/2007

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

South Map:	35079-D2 SANFORD, NC
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

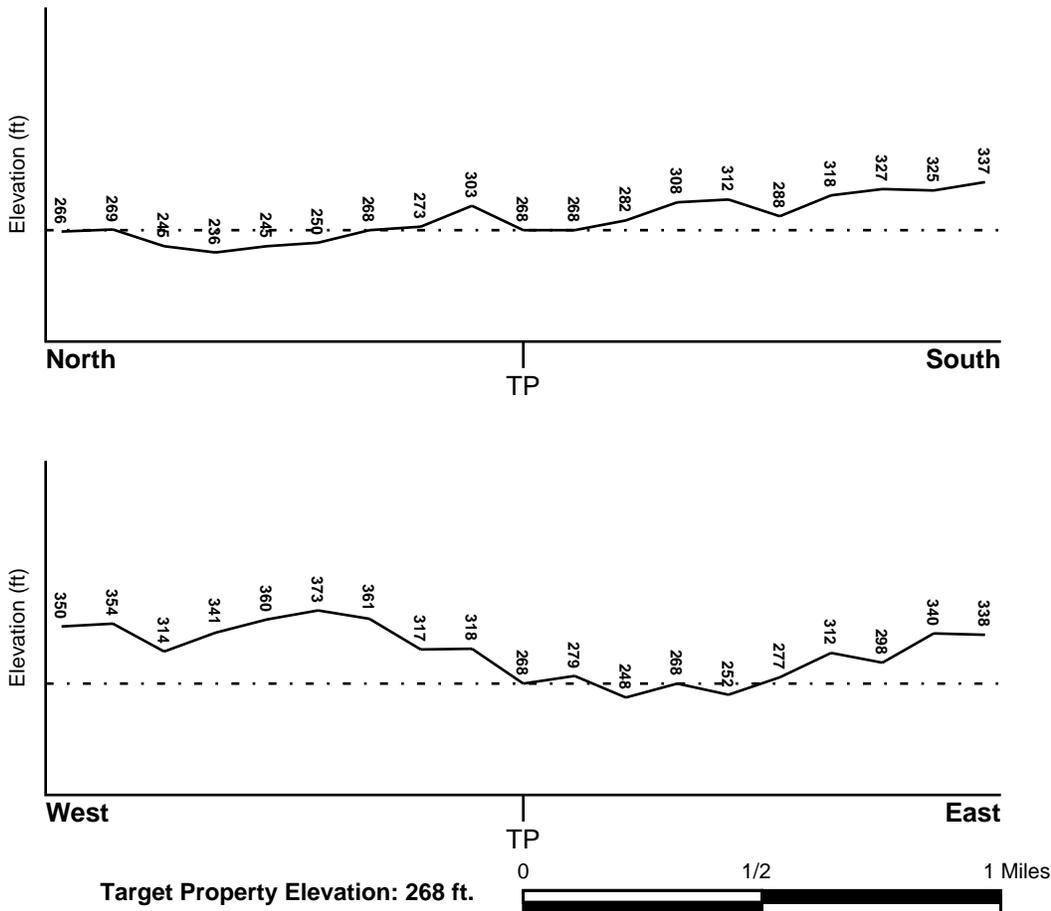

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	<u>FEMA Flood Electronic Data</u>
LEE, NC	Not Available

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
COLON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Triassic
Series: Triassic
Code: Tr *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: MAYODAN

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	12 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 6.00 Min: 4.50
2	12 inches	18 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	18 inches	47 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 2.00 Min: 0.60	Max: 5.50 Min: 4.50
4	47 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
fine sandy loam
clay loam
channery - silt loam
loam

Surficial Soil Types: silt loam
fine sandy loam
clay loam
channery - silt loam
loam

Shallow Soil Types: loam
sandy clay loam
clay
very channery - silt loam
silt loam

Deeper Soil Types: unweathered bedrock
weathered bedrock
loamy sand

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 919-733-2090

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report includes results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers follows established procedures to:

- search for parcel information, legal description, and ownership based on client supplied address information;
- research indexes and title repositories;
- obtain a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument (title, parties involved, and description); and
- provide a copy of the deed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Areas of Specialization

Environmental Liability Evaluations

Large Scale Remediation

Environmental Site Assessments and Audits

International Due Diligence

Environmental Data Management Systems (EDMS)

Professional Experience

Mr. Jelinek has over 10 years of experience in the environmental field dealing with large scale remediation and environmental liability programs. Key areas for technical and regulatory support include mergers and acquisitions, environmental site assessments, international due diligence, and environmental data management.

Mr. Jelinek managed environmental engineering support on investigation projects and value-added business solutions as part of an asset divestiture evaluation for a national fertilizer manufacturer. He was responsible for environmental Site Assessment activities in New Jersey, Florida, Massachusetts, Oregon, Ohio, and California. He directed teams from each state to better provide local regulatory context and provide overall project cost savings and compliance with specific state requirements.

Mr. Jelinek directed focused remedial feasibility studies and conducted site investigations through the Czech National Property Fund for a number of Fortune 500 companies expanding into the region through privatization of former “state-run” facilities. His responsibilities included the evaluation of potential remedial options for addressing both impacted soil and groundwater, numerous Phase I environmental site assessments, due diligence audits, and a completion of a quantitative risk assessment for a turn-key utility expansion project. He was a key team member for maintaining client relations with foreign investors and multi-national corporations.

Mr. Jelinek directed a \$450K site cleanup project for an active facility in northwest Ohio. Activities included hazardous waste closure in accordance with Resource Conservation and

Recovery Act (RCRA), removal of subsurface varnish and TCE tanks, installation of venting system to reduce indoor air/vapor intrusion impacts, and soil excavation. He was responsible for preparation and implementation of hazardous waste field investigation plans, remedial designs, treatability studies, construction management, and oversight.

Mr. Jelinek directed on-site activities for a \$475K Ohio Voluntary Action Program (VAP) Phase II environmental site investigation and transaction assessment for an international automotive parts manufacturer. He completed hazardous waste closure activities in accordance with RCRA guidance; city and state Cessation of Regulated Operations (CRO) reports; tank removal under the Ohio Bureau of Underground Storage Tanks Regulations (BUSTR); and cleanup activities associated with polychlorinated biphenyls (PCB) contamination; he managed all of these site activities on-budget and ahead of schedule. Mr. Jelinek developed site-specific analytical models to support site closure and stream-lined field data collection and management. He created databases which allowed for collaboration among different end-users for expedited data review and decision making. He supervised the design and installation of a remedial indoor air venting system to mitigate vapor intrusion in accordance with VAP institutional controls requirements. He managed budget allocations and man-power, task scheduling, and technical review of all outputs to client and state regulators. A No Further Action and Covenant Not to Sue letter were granted from the Ohio EPA based on the successful submission of documents and data.

Mr. Jelinek was responsible for providing hydrogeology support for a major municipal solid waste landfill consortium in the Midwest. He managed multiple impact assessments for several operating and closed municipal and industrial landfills, as well as field verification and long-term monitoring programs. He customized statistical groundwater models for analytical data management. He coordinated and negotiated agreements with state regulators for site corrective actions and closure assessments. He was responsible for project and budget management, along with training of project staff.

Mr. Jelinek designed an emissions compliance database and created schematics, diagrams, and QA/QC plan for an NO_x continuous emissions monitoring system (CEMS) and continuous opacity monitoring system (COMS) for a refinery in Ohio. He led discussions among vendors and state and federal authorities to streamline database input requirements. He was responsible for proper submittal of technical documentation to state and federal permitting agencies. He reviewed and applied state and federal regulations to the appropriate monitoring plan and QA/QC plan.

Mr. Jelinek managed compliance tracking software for a \$2 million environmental data management system (EDMS). He managed an off-the shelf environmental software package to store, track, and calculate data for natural gas terminals and developed a compliance schedule for key staff. He lead on-site consulting services for an EDMS at a petroleum refinery in southeast Texas. He was responsible for analyzing emission inventory data and air permit requirements to maintain compliance with state and federal regulations, along with completing project activities on-time and within budget.

Professional Experience

Mr. Huggins is a registered Professional Geologist, a Professional Hydrogeologist, and a Diplomate of the American College of Forensic Examiners with more than 20 years of experience. He possesses a broad range of multimedia environmental experience. His primary areas of expertise include environmental due diligence and auditing; multimedia environmental investigations under RCRA, CERCLA, and voluntary cleanup programs; multi-media permitting; and water resource evaluations, permitting, and management.

He has performed hundreds of Due Diligence Assessments relative to the transfer of heavy industrial and commercial properties throughout the eastern United States. He acted as the Principal-in-Charge for over 15 Brownfields Redevelopment projects utilizing state Voluntary Cleanup Guidelines. Mr. Huggins has conducted comprehensive regulatory analyses and environmental and health & safety audits for a wide variety of industries including, but not limited to, fiber manufacturing facilities, heavy equipment and tool manufacturing facilities, and

petroleum and chemical facilities. Additionally, he was the Principal-in-Charge for the development of an Environmental Management System (EMS) for a 1-million sq ft (under roof) industrial park located at a redeveloped plant site serving 45 industrial tenants. Mr. Huggins has acted as the project manager on multiple air, water, and waste permitting projects in addition to preparing Storm Water Management Plans (SWMPs) and Spill Prevention, Containment and Control (SPCC) Plans for industry.

As a provider of technical services to the legal community, Mr. Huggins has rendered expert testimony and litigation support on both civil and bankruptcy actions. On one specific case, he provided expert testimony regarding a groundwater supply deficit associated with a large residential development. Mr. Huggins represented the plaintiff, who was successful in the claim.

Mr. Huggins' site investigation/remediation experience includes managing the compliance and closure of more than 400 petroleum and hazardous waste storage tanks including both above-ground storage tanks (ASTs) and underground storage tanks (USTs), as well as the closure of numerous sites involving the previous management of chlorinated solvents, including tool and heavy equipment manufacturing facilities, ammunition plants, dry cleaning facilities, rail yards, dry cleaning facilities, landfills, and Superfund and RCRA facilities. Mr. Huggins has extensive experience investigating and remediating lead-contaminated sites, particularly those associated with the automotive, steel fabrication, and metals recycling industries.

Re: Limited Remedial Investigation
101 McNeill Road
Sanford, North Carolina
URS Corporation Job Number 38854798

Dear Mr. Hansen:

URS Corporation – North Carolina (URS) is pleased to present the findings of the Limited Remedial Investigation activities conducted from September 9 through November 18, 2009 at the property located at 101 McNeill Road in Sanford, North Carolina (Site). A Site Map is attached as **Figure 1**. The scope of work performed and documented herein was conducted in accordance with the URS proposal dated June 16, 2009 and is part of the Remedial Investigation being conducted at the Site.

1.0 BACKGROUND

The Site consists of approximately 25 acres with a 269,000-square-foot, one-story, building located northeast of the United States (U.S.) Route 421 and McNeill Road intersection in Sanford, North Carolina.

URS conducted a Phase I Environmental Site Assessment (ESA) of the subject property on December 26, 2007. URS did not identify any Recognized Environmental Concerns (RECs) associated with the Site. To evaluate potential business risk related to the transaction of the Site from Fedders Corporation (Fedders) to Tompkins, URS performed a Phase II ESA and Asbestos Inspection.

The findings of the Phase II ESA indicated the presence of chlorinated solvents in the groundwater collected from monitoring wells located on the northeastern portion of the Site. The Phase II ESA report was submitted to North Carolina Department of Environment and Natural Resources – Inactive Hazardous Sites Branch (NCDENR-IHSB) in July 2008.

In October 2008, Fedders received a notice of Regulatory Requirements for Contaminant Assessment and Cleanup from NCDENR, approving the Site to enter into the Registered

URS Corporation – North Carolina
6135 Park South Drive, Suite 300
Charlotte, North Carolina 28210

(704) 522-0063 Fax

Environmental Consultant (REC) Program. URS, Fedders, and NCDENR are currently in the process of finalizing the Administrative Agreement (AA) for signature.

2.0 SCOPE OF WORK

Based on the proposal dated June 16, 2009, URS completed the following limited scope of work at the Site to further assess the presence of onsite environmental impacts attributable to activities associated with past onsite operations.

2.1 Location of the Former Process Wastewater Drainage Line

URS geophysicist attempted to locate the former process wastewater drainage line (drainage line) on September 9, 2009. URS utilized a Ground Penetrating Radar (GPR) and an Electro Magnetic (EM-61 MK2) metal locator to evaluate the location of the drainage line. As shown on **Figure 2** (Geophysical Survey Results), the drainage line initiated from the process water pit and trends northeast towards MW-11 and a drop inlet, which connects to a storm water line.

2.2 Former Process Wastewater Drainage Line and Storm water Line Camera Inspection

URS subcontracted ABE Utilities, Inc. to evaluate the former process wastewater drainage line's integrity (i.e., cracks, breaks, etc.) and length on October 8, 2009. A video camera was used to visually evaluate the condition of the line in real-time. A flexible, fiber optic cable with a specially designed high-resolution video camera on its tip was inserted into the line for inspection. As the cable was pushed through the line, the hardened waterproof camera, equipped with powerful lights, recorded its journey and findings. It was observed that the drainage line ended at the drop inlet number 2 (DI 2), which connected to the storm water line. Hence, the integrity of the storm water line was also inspected. The integrity of the wastewater drainage line appears to be intact from the video images that were transmitted to the camera operator. However, an elevation change from 2 feet to 4 feet below ground surface (bgs) was noted in the wastewater drainage line near the process water pit. Also, several separated joints in the reinforced concrete pipe (RCP) of the storm water line were observed in the vicinity of monitoring well TMW-8. Results of the camera inspection are attached in **Appendix A** and **Figure 3** (Existing Soil Boring Locations).

2.3 Soil Sampling and Analysis

Soil samples were collected along the drainage line to evaluate the potential for this feature to be the source of the chlorinated solvent impacted groundwater. Soil borings were advanced along certain sections of the former wastewater drainage line and the storm water line based on the geophysical findings and the integrity of the drainage line and storm water line (**Figure 3**).

Mad Dawg, Inc. a North Carolina licensed driller, advanced seventeen (17) soil borings (DSB-1 through DSB-17) along the drainage and storm water lines on November 18, 2009. The borings were advanced using a direct-push, track mounted, Geoprobe® unit. Prior to advancing the soil borings, URS geophysicist conducted a subsurface utility survey to mark the utilities in the vicinity of the proposed soil boring locations. **Figure 3** shows the locations of the soil borings.

Eight soil borings (DSB-1 through DSB-8) were advanced to a depth of five feet bgs. Two soil borings (DSB-9 and DSB-10) were advanced to the soil/groundwater interface, approximately 10 feet bgs and seven soil borings (DSB-11 through DSB-17) were advanced to approximately 12 feet bgs. Soil samples were screened in the field for odors and discoloration and were then screened in the field for volatile organic vapor concentration with a photo-ionization detector (PID) using an appropriate headspace technique. Borings were screened with the PID at 1-foot intervals to a depth of 4 feet bgs and at 2-foot intervals at depths greater than 4 feet bgs. The interval of soil from each soil boring exhibiting the highest PID reading was sampled and submitted to Pace Analytical Services (Pace), a North Carolina certified laboratory for analysis of volatile organic compounds (VOCs) by U. S. Environmental Protection Agency (EPA) Method 8260.

Based on PID readings, the following soil samples were initially submitted to Pace:

DSB-1 2-3'	DSB-1 4-5'	DSB-2 4-5'	DSB-3 3-4'	DSB-4 4-5'
DSB-5 3-4'	DSB-5 4-5'	DSB-6 3-4'	DSB-6 4-5'	DSB-7 2-3'
DSB-7 4-5'	DSB-8 0-2'	DSB-8 4-5'	DSB-9 6-8'	DSB-10 8-10'
DSB-11 4-6'	DSB-11 10-12'	DSB-12 0-2'	DSB-12 10-12'	DSB-13 6-8'
DSB-13 10-12'	DSB-14 10-12'	DSB-15 10-12'	DSB-16 6-8'	DSB-17 8-10'
DSB-17 10-12'				

In addition to the above soil borings, the following samples were also submitted for analyses of VOCs via EPA Method 8260 based on the above soil results:

DSB-2 3-4'	DSB-3 2-3'	DSB-4 3-4'	DSB-5 2-3'	DSB-6 2-3'
DSB-9 4-6'	DSB-12 4-6'	DSB-12 6-8'	DSB-13 4-6'	DSB-14 4-6'
DSB-15 4-6'	DSB-16 4-6'	DSB-17 6-8'		

Soil borings were abandoned with hydrated granular bentonite. Borings in which groundwater was encountered were properly abandoned in accordance with North Carolina Well Standards and Regulations, R. 61-71.

2.4 Groundwater Sampling and Analysis

On September 10, 2009, URS sampled the twelve (12) existing onsite groundwater monitoring wells (TMW-1 through TMW-5 and MW-6 through MW-12). The samples were analyzed for the constituents of concern (COCs). Monitoring well locations are shown on **Figure 1**. Prior to

sampling, the monitoring wells were purged using a submersible two-inch diameter, stainless steel, Mega-Typhoon pump and new Teflon[®] tubing in accordance with the EPA protocol for low flow groundwater sampling. Following monitoring well purging, groundwater samples were collected from the top of the water column at each well using a new disposable bailer and submitted to Pace for analysis of VOCs by EPA Method 8260.

3.0 ANALYTICAL RESULTS

3.1 Soil Analytical Results

Analytical soil results indicate the presence of VOCs in excess of their respective IHSB Soil Remediation Goals (SRGs) in two of the forty three (43) soil samples submitted for analysis.

- The estimated vinyl chloride result of 0.0042 milligrams per kilogram (mg/kg) from soil sample DSB-6 (4'-5') exceeds the vinyl chloride SRG of 0.000096 mg/kg.
- Cumene, 1, 2,4-trimethylbenzene and 1,3,5-trimethylbenzene results from soil sample DSB-7 (2'-3') exceed their respective IHSB SRGs.

The other constituents detected were either below the NCDENR-IHSB SRG or not detected above laboratory detective limits. A summary of the soil analytical results is presented in **Table 1** and **Figure 4**. Copies of the laboratory analytical reports are attached in **Appendix B**.

3.2 Groundwater Analytical Results

Analytical groundwater results indicate the presence of VOCs in excess of their respective NCDENR 2L (2L) Standards in three of the twelve (12) groundwater samples submitted for analysis.

- TCE concentration in well TMW-4 increased since February 2008 from 9.5 micrograms per liter (ug/L) to a concentration of 13.3 ug/L exceeding the 2L of 2.8 ug/L.
- TCE concentration in well MW-6 increased to 2.9 ug/L exceeding the 2L standard of 2.8 ug/L.
- Cis-1,2 Dichloroethylene (cis-1,2DCE) concentration in well MW-8/TMW-8 increased from 38.9 ug/L (April 2008) to 113 ug/L exceeding the 2L standard of 70 ug/L.
- TCE concentration in well MW-8/TMW-8 increased from 12.6 ug/L (April 2008) to 61.6 ug/L exceeding the 2L standard of 2.8 ug/L.

A summary of the groundwater results from 2008 and 2009 groundwater sampling is presented in **Table 2**. A summary of the 2009 groundwater results is presented in **Figure 5**. Copies of the laboratory analytical reports are attached in **Appendix B**.

All other constituents detected were either below the 2L standards or not detected above the reporting limit.

4.0 CONCLUSIONS AND RECOMMENDATIONS

URS has completed an onsite Remedial Investigation. The integrity and length of the process wastewater drainage line was observed as a part of this investigation. URS concluded that the process wastewater drainage line ended into the drop inlet number 2 (DI 2), which connected to the storm water line (**Figure 3**).

A total of seventeen (17) soil borings were advanced near the former wastewater drainage and storm water lines on the eastern portion of the Site to evaluate the potential for the former wastewater drainage line to be the source of the groundwater impacts. URS also sampled twelve (12) groundwater monitoring wells to assess the horizontal extent of VOC impacts and to evaluate concentration trends in those wells. Soil and groundwater samples were analyzed for VOCs by EPA Method 8260.

The exceedances from soil and groundwater results predominately consist of degraded chlorinated compounds with the exception of DSB-7 (2'-3') soil sample results, which exceed their respective cumene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene IHSB SRGs. Based on the location of soil boring DSB-7, these exceedances may be attributable to surface run off from the paved parking lot.

Based on the process wastewater drainage line and the storm water line inspections as well as results from the soil boring samples (**Table 1**) and groundwater samples (**Table 2**), it appears that the regulatory exceedances correlate to the wastewater drainage line (**Figures 4 and 5**).

Therefore, URS recommends additional soil sampling in the area of DSB-7 to confirm the presence/absence of these compounds as they are not degradation compounds of the Site COCs. URS also recommends an approximate 5 feet x 5 feet x 5 feet excavation in the area of DSB-6 (4-5 feet) soil sample location in order to address the impacted soil at this location.

URS conducted the remedial investigation at the request of Fedders Corporation as part of the Remedial Investigation for the Site. These activities were conducted in accordance with the REC guidelines. Additional off-site assessment is required to complete the remedial investigation and to make remedial alternative recommendations. URS is currently assisting Fedders in obtaining access to the off-site adjacent property located at 109 McNeill Road to complete these activities.

APPENDIX B

September 17, 2009

Ms. Dhara Trivedi
URS Corporation
PO Box 203970
Austin, TX 78720

RE: Project: TRION INC 38854798
Pace Project No.: 9252917

Dear Ms. Trivedi:

Enclosed are the analytical results for sample(s) received by the laboratory on September 11, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brandon Helton for
Kevin Herring
kevin.herring@pacelabs.com

QUALIFIERS

Project: TRION INC 38854798

Pace Project No.: 9252917

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

RE: Project: Trion, Inc. 38854798
Pace Project No.: 9258001

Dear Ms. Trivedi:

Enclosed are the analytical results for sample(s) received by the laboratory on November 19, 2009. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brandon Helton for
Kevin Herring
kevin.herring@pacelabs.com

ANALYTICAL RESULTS

Project: Trion, Inc. 38854798

Pace Project No.: 9258001

Sample: **DSB-3 (3-4)** Lab ID: **9258001004** Collected: 11/18/09 20:06 Received: 11/19/09 16:55 Matrix: Solid

Results reported on a "dry-weight" basis

REPORT OF LABORATORY ANALYSIS

Page 56 of 92

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

ANALYTICAL RESULTS

Project: Trion, Inc. 38854798

Pace Project No.: 9258001

Sample: DSB-15 (10-12) **Lab ID: 9258001026** Collected: 11/18/09 19:51 Received: 11/19/09 16:55 Matrix: Solid

Results reported on a "dry-weight" basis

ANALYTICAL RESULTS

Project: Trion, Inc. 38854798

Pace Project No.: 9258001

Sample: DSB-17 (10-12) **Lab ID: 9258001030** Collected: 11/18/09 20:21 Received: 11/19/09 16:55 Matrix: Solid

Results reported on a "dry-weight" basis

Toluene-d8 (S)	%			103	88-110	

QUALIFIERS

Project: Trion, Inc. 38854798

Pace Project No.: 9258001

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

C9 Common Laboratory Contaminant.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

R1 RPD value was outside control limits.

S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

S6 Surrogate recovery outside control limits. Data accepted based on valid recovery of applicable surrogates (no analytes associated with this surrogate)

Memorandum

Date: June 21, 2010
To: Kent Hansen - Fedders
From: Kristine MacWilliams
Subject: **Technical Memorandum – Trion Facility – Confirmatory Sampling**

URS Corporation (URS) has prepared this Technical Memorandum to summarize supplemental sampling activities conducted at 101 McNeill Road in Sanford, North Carolina (Site) on March 25, 2010.

As documented in the Limited Remedial Investigation (RI) letter report submitted to Fedders Corporation on February 4, 2010 (Limited RI Report), URS collected soil samples near the process drainage line on November 18, 2009 as part of the remedial investigation activities. Cumene, 1,2,4-trimethyl benzene (TMB) and 1,3,5-TMB results from soil sample DSB-7 (2-3 feet) exceeded [what criteria?]. These contaminants are not representative of the contaminants of concern (COCs) at the Site nor are they degradation compounds of site COCs, but instead were likely due to surface run-off from the paved parking lot in the vicinity of soil sample DSB-7 (2-3 feet).

URS collected two confirmatory soil samples (DSB-18 and DSB-19) near DSB-7 on March 25, 2010 to confirm these detected constituents were not representative of site COCs as recommended in the Limited RI report (see **Figure 1**). The two (2) soil borings were advanced to a depth of 3 feet below ground surface (bgs) using a hand auger. Soil samples were screened in the field for odor, discoloration, and volatile organic vapor concentration using a photo ionization detector (PID). The samples were then submitted to Pace Analytical Services (Pace), a North Carolina certified laboratory for analysis of Volatile Organic Compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260B. None of the EPA Method 8260B compounds were detected in the confirmatory samples, thereby confirming that the DSB-7 exceedances were likely attributable to surface run-off.

RE: Project: TRION INC. 38854798
Pace Project No.: 9266192

Dear Ms. Trivedi:

Enclosed are the analytical results for sample(s) received by the laboratory on March 26, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

Inorganic Wet Chemistry and Metals analyses were performed at our Pace Asheville laboratory and Organic testing was performed at our Pace Huntersville laboratory unless otherwise footnoted. All Microbiological analyses were performed at the laboratory where the samples were received.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

PROJECT NARRATIVE

Project: TRION INC. 38854798

Pace Project No.: 9266192

Method: EPA 8260

Description: 8260/5035A Volatile Organics

Client: URS Corporation

Date: April 05, 2010

General Information:

2 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: TRION INC. 38854798

Pace Project No.: 9266192

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

This Health and Safety Plan is valid only for this specific project as described in Section 2.0. It is not to be used for other projects or subsequent phases of this project without the written approval of the Manager of Health and Safety.

**Health and Safety Plan
Site Investigation Activities
Trion, Inc. Facility
Sanford, North Carolina**

H&H Job No. BAI-001

1.0 Summary

Hart & Hickman, P.C. (H&H) is under contract to perform soil, ground water, and sediment sampling and other related environmental activities at the Trion, Inc. (Trion) facility located at 101 McNeill Road in Sanford, Lee County, North Carolina (Figure 1). The site is currently owned and operated by Air System Components, Inc. which purchased the assets of Trion out of the bankruptcy proceedings of Fedders Corporation and its subsidiaries. The facility manufactures, assembles, and warehouses air purification equipment. Manufacturing operations consist of metal stamping, forming of parts, parts washing prior to painting, painting, welding, air cleaning unit assembly and packaging, and warehousing prior to shipping.

According to previous investigations conducted at the site, ground water located in the vicinity of the former process wastewater discharge line is impacted predominately by chlorinated solvents and to a lesser extent, petroleum or aromatic hydrocarbons compounds. The predominate ground water impacts consist of chlorinated volatile organic compounds (VOCs) including: tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and chloromethane.

The exposures anticipated from these compounds are expected to be minimal based on knowledge of current conditions at the site and the level of disturbance posed by proposed sampling and site work practices.

Skin contact with potentially contaminated soil or water will be minimized by wearing personal protective clothing (as described in Section 6.0). Inhalation of vapors during ground water sampling and other related environmental activities will be minimized by air monitoring, engineering controls, and/or the use of respiratory protection if necessary. Ingestion of

contaminated materials will be minimized by good personal hygiene practices (i.e., thoroughly washing face and hands with soap and water before eating or drinking).

An organic vapor analyzer will be used to monitor for vapors. The analyzer will be used on a regular basis to monitor air in the breathing zone in the work area. If readings in the operator's breathing zone (OBZ) exceed an average of 25 ppm (PCE, TWA =1) for more than one minute above background, personnel will evacuate the area until a safe engineering solution is determined.

2.0 Applicability

The purpose of this plan is to assign responsibilities, establish personal protection standards and mandatory safety procedure, and provide for contingencies that may arise while operations are being conducted at the site. This plan was developed specifically for operations at the Trion, Inc. facility. This plan complies with, but does not replace, Federal Health and Safety Regulations as set forth in 29 CFR 1910 and 1926. This plan is to be used by H&H's personnel as a supplement to such rules, regulations, and guidance. The provisions of the plan are mandatory for all on-site H&H employees engaged in hazardous material management activities associated with this project which may involve health and safety hazards.

Changing and/or unanticipated site conditions may require modification of this safety plan in order to maintain a safe and healthful work environment. Any proposed changes to this plan should be reviewed with the H&H Manager of Health and Safety (MH&S), or his designee, prior to their implementation. If this is not feasible, the project manager (PM) may modify the plan and record all changes in the field log book. Under no circumstances will modifications to this plan conflict with federal, state, or local health and safety regulations.

H&H will make a copy of this Health and Safety Plan available to each site subcontractor. However, each of H&H's subcontractors is to provide their own Health & Safety Plan (HSP) that addresses the activities of their employees relative to this project.

3.0 Facility Background/Work Plan

The site is located at 101 McNeill Road, Sanford, Lee County, North Carolina. The main subject property is the Trion, Inc. facility but work areas will also include surrounding properties. The site is currently owned and operated by Air System Components, Inc., which manufactures, assembles, and warehouses air purification equipment. Manufacturing operations consist of metal stamping, forming of parts, parts washing prior to painting, painting, welding, air cleaning unit assembly and packaging, and warehousing prior to shipping. The proposed investigative activities at the site(s) include soil, ground water, and sediment sampling and monitor well installations.

4.0 Job Hazard Analysis

The primary hazards anticipated are potential exposures to chlorinated VOCs in soil, ground water, and/or sediments. The primary contaminants of concern for the site are PCE, TCE, cis-1,2-DCE, and chloromethane.

Physical hazards at this work site include those associated with heat stress and cold stress, trip and fall type accidents, back injuries due to improper lifting, being caught in or struck by moving equipment and electrocution or explosion hazards associated with drilling or excavation activities, such as contact with overhead or underground power lines or pipelines.

4.1 Heat Stress and Cold Stress Recognition and Control

The wearing of Personal Protective Equipment (PPE) and working outside can place a worker at risk of developing heat or cold stress. This can result in health effects ranging from transient heat fatigue to serious illness or death. Heat and cold stress are caused by a number of interacting factors, including environmental conditions, clothing, work load, and the individual characteristics of the worker. Symptoms of both heat stress and cold stress are provided in Appendix B.

4.2 Chemical Hazards

Overviews of the hazards associated with exposure to the chemicals found on-site to date are presented below. OSHA Permissible Exposure Limits (PELs), ACGIH Threshold Limit Values (TLVs), and time weighted averages (TWAs) are defined as concentrations for an 8-hour work day, 40-hour work week to which almost all workers can be repeatedly exposed without suffering adverse health effects. Short Term Exposure Limit (STEL) is defined as the concentration to which workers can be exposed for short time periods without irritation, tissue damage, or narcosis sufficient to likely cause impairment of self-rescue or to precipitate accidental injury. The STEL is a 15-minute time-weighted average that should not be exceeded at any time during the work day.

A ceiling value (c) is a concentration that should not be exceeded at any time in any work day. The Immediately Dangerous to Life or Health (IDLH) value is defined as the situation that poses a threat of exposure to airborne contaminants when that exposure is likely to cause death or immediate or delayed permanent adverse health effects or prevent escape from such an environment. The purpose of establishing an IDLH is to "ensure that the worker can escape from a given contaminated environment in the event of failure of the respiratory protection equipment." The following table summarizes the potential contaminants at the site and their respective TWA, STEL/ ceiling, and IDLH values.

Compound	CAS Number	Air TWA (ppm)	Air STEL/Ceiling (ppm)	IDLH (ppm)
Tetrachloroethene (PCE)	127-18-4	25	100/200 C (1)	Ca [150]
Trichloroethene (TCE)	79-01-6	50	100	Ca [1,000]
Chloromethane	74-87-3	50	100/200 C	Ca [2,000]
cis-1,2-Dichloroethene (cis-1,2-DCE)	156-59-2	200	---	1,000

Ref: NIOSH Pocket Guide (September 2005) and ACGIH TVLs and BEIs (2009)

(1) 300 ppm Ceiling (5-minute maximum peak in any 3-hour period)

Ca = NOISH-considered potential occupational carcinogen

A brief description of these compounds including general symptoms or effects of exposure, chemical characteristics, vapor pressures and ionization potentials (eV) (if available) is provided below.

Tetrachloroethene (tetrachloroethylene; perchlorethylene; PCE) (CAS 127-18-4)

Tetrachloroethene in its true form is a colorless liquid with a mild chloroform-like odor and is listed as a carcinogen. Exposure symptoms include irritant to eyes, nose, throat if inhaled; nausea if absorbed, dizziness and headache if ingested; and burning of skin with contact. Chronic effects include liver damage and have been tested to cause cancer in animals. PCE's ionization potential (IP) is 9.32 eV, and its vapor pressure is 14 mm Hg.

Trichloroethene (Trichloroethylene; TCE) (CAS 79-01-6)

Trichloroethene is a central nervous system depressant. Exposure symptoms include headache, nausea, tremors and fatigue, but these typically do not occur until air concentrations reach 175-200 ppm. Chronic effects include liver damage and some studies indicate TCE is an animal carcinogen. TCE is known to the State of California to cause cancer under the criteria of Proposition 65. Excessive skin contact can cause defatting of the skin and subsequent dermatitis. The mean air odor threshold for TCE is 82 ppm, which gives it a poor warning property (since the TWA is 50 ppm). TCE's IP is 9.47 eV, and its vapor pressure is 58 mm Hg.

Chloromethane (Methyl chloride) (CAS 74-87-3)

Chloromethane is a colorless gas with a faint, sweet odor which is not noticeable at dangerous concentrations. Exposure symptoms include dizziness, nausea, vomiting, visual disturbance, stagger, slurred speech, and convulsions. Chronic effects include coma, liver and kidney damage, and reproductive and teratogenic effects. Target organs include the central nervous system, liver, kidneys, and reproductive system. Skin contact can cause frostbite. The IP for chloromethane is 11.28 eV.

Cis - 1,2-dichloroethene (CAS 156-59-2)

Cis-1,2-Dichloroethene is a colorless liquid with a slightly acrid, chloroform-like odor. Symptoms of exposure include irritation to the eyes and respiratory system. Cis-1,2-

Dichloroethene can effect the central nervous system and act as a depressant. Cis-1,2-Dichloroethene has an ionization potential of 9.56 eV, vapor pressure of 180 to 265 mm Hg, and an odor threshold of 17 ppm.

The following potential exposures may exist at the site: 1) skin contact with contaminated materials (i.e., soil, water, sediments), 2) inhalation of vapors or particulates, and/or 3) ingestion of contaminated materials, especially if poor personal hygiene is practiced.

Skin contact with potentially contaminated soil or water will be minimized by the use of personal protective clothing (as described in Section 6.0). Inhalation of vapors or particulates during the sampling activities will be minimized by air monitoring and the use of engineering controls if action levels are exceeded (Section 5.1). Ingestion of contaminated materials will be minimized by the use of appropriate personal hygiene procedures during decontamination (i.e., thoroughly washing face and hands with soap and water after leaving the work area and prior to eating or drinking).

4.3 Noise Hazards

The primary noise hazard at this site is from the potential use of drilling equipment. Previous surveys indicate that such equipment may produce continuous and impact noise at or above the action level of 85 dBA. All H&H personnel within 25 feet of operating equipment shall wear hearing protective devices (either muffs or plugs). Personnel will wash their hands with soap and water prior to inserting ear plugs as a good hygiene practice.

4.4 Underground Utilities

H&H will attempt to locate underground utility locations with the help of the North Carolina utility locator service NC ONE CALL and private utility locator (as necessary) prior to the commencement of drilling activities. The deactivation of utilities (as necessary) should be certified by the proper utility company personnel as necessary, and the certification retained in the field book.

4.5 Work Area Protection

As work operations may be undertaken in a driveway or parking lot, motor vehicles may be a hazard. The work area should be sufficiently coned, flagged, and barricaded from other traffic (if possible).

4.6 Heavy Equipment

Operation of heavy equipment in drilling, excavation, or other activities presents potential physical hazards to personnel. Precautions should be observed whenever heavy equipment is in use. PPE such as steel-toed shoes, safety glasses or goggles, and hard hats should be worn whenever such equipment is present. Personnel should at all times be aware of the location and operation of heavy equipment, and take precautions to avoid getting in the way of its operation.

Never assume that the equipment operator sees you; make eye contact and use hand signals to inform the operator of your intent. Never walk directly in back of, or to the side of, heavy equipment without the operator's knowledge. When an equipment operator must operate in tight quarters, the equipment subcontractor should provide a person to assist in guiding the operator's movements. Keep all non-essential personnel out of the work area. All heavy equipment that is used in the exclusion zone should remain in that zone until its task is completed. The equipment subcontractor should completely decontaminate such equipment in the designated equipment decontamination area as required.

5.0 Exposure Monitoring Plan

5.1 Chemical Exposure Monitoring

A flameionization detector (FID) will be used to monitor intermittently for VOC vapors. If readings exceed an average of 25 ppm (PCE, TWA =25) above background for more than one minute, personnel will evacuate from the work area until a safe engineering solution is determined. The solution may include the use of engineered controls and additional PPE such as respirators. The site action level should be discussed at a safety briefing prior to the start of work each day.

5.2 Background Readings

All instrument readings will be evaluated relative to background readings, not "meter zero". Prior to the start of work at each shift, and whenever there is a significant shift in wind direction, instrument readings will be obtained upwind of the site work zone in order to determine the level of "background" readings from local vehicle traffic, heavy equipment, nearby operations unrelated to the site, etc. Site readings will be evaluated against these background readings (i.e., if an action level is listed as 25 ppm, it is evaluated as 25 ppm above background).

5.3 Data Logging

Exposure monitoring data, including background readings, will be logged in the field book. The results of daily instrument calibrations should also be logged in the field book. Monitoring instruments will be calibrated, in accordance with the manufacturer's instructions, prior to the start of each work day. Calibration should also be performed when inconsistent or erratic readings are obtained. If an instrument cannot be calibrated to specification, or becomes otherwise inoperable, invasive site work (i.e., drilling, excavating) will cease until the instrument is appropriately repaired or replaced. The PM, MH&S or HSP Preparer should be contacted for further guidance.

5.4 Dust Control

Elevated levels of organic contaminants may be present at the site. Airborne exposure could potentially occur during excavation or drilling operations. If excavation or drilling operations generate sustained visible dust, a water mist will be applied to reduce dust generation. If the mist is not effective in reducing dust generation, personnel will don respirators (full-face as appropriate for analyzer readings) with combination organic vapor-HEPA cartridges.

6.0 Personal Protective Equipment

Minimum protective equipment for site personnel shall include: Hardhat, ear protection when around drilling equipment or other high noise equipment, safety glasses and steel-toed boots. If the OVA reading is greater than the action level prescribed in Section 5.1 of this plan, the area will be evaluated until a safe engineering solution is determined. The solution may include the

use of engineered controls and PPE such as respirators. A list of PPE which may be required is provided in Appendix C.

7.0 Site Control

7.1 General

The purpose of site control is to minimize potential contamination of workers, protect the public from site hazards, and prevent vandalism. Site control is especially important in emergency situations. When necessary, several site control procedures will be implemented to reduce worker and public exposure to chemical, physical, biological, and safety hazards. Barricades and barricade tape should be used to delineate a work zone for safety purposes around the work area. The barriers should be set in a 25 foot radius (as practical) around the work area to provide sufficient maneuvering space for personnel and equipment.

At the end of the shift, boring/sampling holes and excavations must be covered or otherwise secured. Cuttings and decontamination fluids are to be handled in accordance with relevant regulations and instructions from the PM.

7.2 Work Zones

When necessary, the following work zones will be established:

- Exclusion Zone - a 25 foot (as practical) circle around the work area will be defined before work starts. The encircled area will constitute the "Exclusion Zone". This zone is where potentially hazardous contaminants and physical hazards to the workers will be contained. Full personal protection will be required in this area. The size of the Exclusion Zone may be altered to accommodate site conditions and to ensure contaminant containment.
- Contamination Reduction Zone (CRZ) - Decontamination activities will occur in the CRZ. A waste container will be placed at the end of the CRZ so contaminated disposal equipment can be placed inside and covered. No H&H personnel will be permitted into the Contamination Reduction Zone or Exclusion Zone unless they are in full compliance with the requirements of this Plan.
- Support Zone - a Support Zone in an uncontaminated or clean area, must be defined for each field activity. Normal work clothes are appropriate within this zone. The

location of this zone depends on factors such as accessibility, wind direction (upwind of work area), and resources (i.e., roads, shelter, utilities).

8.0 Decontamination Procedures

PPE removal and decontamination procedures should be conducted in the CRZ. Using decontamination solutions, decon the shovels, auger flights, etc. by brushing them under a water rinse. A high-pressure steam cleaner may also be used for decon. If required, waste and spent decon solutions will be properly contained. The decontamination area will be covered with plastic sheeting which will be replaced when torn or heavily soiled.

Decontamination chemicals for sampling equipment or protective clothing (such as alcohols, acid, or detergents) and calibration standards (such as isobutylene gas) require Material Safety Data Sheets (MSDS). If requested, the SSO will make copies of these MSDSs available to subcontractors (i.e. drillers, excavators) on this project.

9.0 Safe Work Practices

The following safe work practices will be followed:

1. Eating, drinking, chewing gum or tobacco, and smoking are prohibited in the work area.
2. Personnel will wash their hands and face thoroughly with soap and water prior to eating, drinking or smoking.
3. Avoid contact with potentially contaminated substances. Do not walk through puddles, pools, mud, etc. Avoid, whenever possible, kneeling on the ground, leaning or sitting on equipment or ground. Do not place monitoring equipment on potentially contaminated surfaces (i.e., ground, etc.).
4. All field crew members should make use of their senses to alert them to potentially dangerous situations in which they should not become involved (i.e., presence of strong, irritating or nauseating odors).

5. Only those vehicles and equipment required to complete work tasks should be permitted within the exclusion/work zone (drill rigs, excavators, and similar items). All non-essential vehicles should remain within the support zone.
6. Containers, such as drums, will be moved only with the proper equipment and will be secured to prevent dropping or loss of control during transport.
7. Field survey instruments, such as OVAs, will be covered with plastic or similar covering as necessary to minimize the potential for contamination.
8. No matches or lighters will be permitted in the work area/exclusion zone or contamination reduction zone.
9. Contaminated protective equipment, such as respirators, hoses, boots and disposable protective clothing, will not be removed from the work area/exclusion zone or decontamination area until it has been cleaned.
10. Prevent splashing and spills of the contaminated materials or decon fluids. In the event that a spillage occurs, contain liquid if possible.
11. Field crew members shall be familiar with the physical characteristics of investigations, including: Wind direction in relation to contaminated area, accessibility to equipment and vehicles, communications, hot zones (areas of known or suspected contamination), site access and nearest water sources.
12. The number of personnel and equipment in the contaminated area should be minimized but only to the extent consistent with workforce requirements of safe site operations.
13. Wastes generated during H&H and/or subcontractor activities at the site will be disposed as directed by the PM.
14. Personal protective equipment will be used as specified and required.
15. The buddy system will be used where practical or necessary due to site conditions. The buddy system is when two or more co-workers work together to safely complete a job. The co-workers help one another to follow safe work practices.
16. Personnel are to immediately notify the SSO or Site Manager if any indications potential explosions or unusual conditions are observed.
17. No one wearing contact lenses or having a beard will be permitted in the work area if respirators are required.

10.0 Emergency Response Plan

It is H&H's policy to evacuate personnel from areas involved in hazardous material emergencies and to summon outside assistance from agencies with personnel trained to deal with the specific emergency. This section outlines the procedures to be followed by H&H personnel in the event of a site emergency. These procedures are to be reviewed during daily on-site safety briefings conducted by the SSO. The safety briefings should be noted in the field book. In the event of a fire or medical emergency, the numbers at listed at the front of this Plan can be called for assistance.

The **nearest hospital** to the site is the **Central Carolina Hospital** located at 1135 Carthage Street in Sanford, North Carolina. From the site take McNeill Road to Boone Trail Road (US-421) and turn left (south). After 2.9 miles, turn right onto Carthage Street. Central Carolina Hospital will be on the left after 0.9 miles. The phone number is (919) 774-2100. A map to the hospital is provided in Attachment A.

Paramedics should be summoned in the event of a serious injury; they will arrange to transport the victim to the nearest appropriate facility. A first aid kit will be available at the site for use in case of minor injuries. If anyone receives a splash or particle in the eye, a clean eyewash solution will be used to irrigate the eye for 15 minutes. If direct contact with contaminants occurs, affected skin areas should be washed immediately with soap and water.

In the event of serious trauma or unknown chemical exposure, the employee should be stabilized by others after checking that the scene is safe. An emergency phone call will be made as soon as possible.

Workers with suspected back or neck injuries are NOT to be moved except by professional emergency workers.

10.1 Places of Refuge

In the event of a site emergency requiring evacuation, all personnel will evacuate to a pre-designated area located in the support zone, a safe distance from the exclusion zone boundary ("hot lines"). The SSO will designate the assembly area prior to the start of work.

10.2 Fire

Whenever the possibility of a fire or explosion exists which could affect field investigation personnel or adjacent work area personnel, or which could occur as the result of the investigation, a special emergency action plan will be prepared as part of the task specification. Subcontractors will be made aware of the provisions of the emergency action plan. In general, Type ABC fire extinguishers will be available on-site to contain and extinguish small fires. The local fire department should be summoned (911) in the event of fires. If it is safe to do so, site personnel may use fire fighting equipment available on-site to control or extinguish the fire and/or remove or isolate flammable or other hazardous materials that may contribute to the fire.

10.3 Communication

A communication network may be set up to alert site personnel of emergencies and to summon outside emergency assistance. Where voice communication is not feasible, an alarm system (i.e., sirens, horns, etc.) should be set up to alert employees of emergencies. Radio communication may also be used to communicate with personnel in the exclusion zone. Where phone service is not readily available, radios or mobile phones should be used to communicate with outside agencies. Site personnel should be trained on the use of the site emergency communication network. The location of emergency phone numbers and phones should be established for outside communication. The SSO is responsible for establishing the communication network prior to the start of work, and for explaining it to all site personnel during the site safety briefing.

In the event of an injury or illness, work is to be stopped until the SSO and the MH&S have determined the cause of the incident and have taken the appropriate action. Any injury or illness, regardless of severity, is to be reported to the Project Manager.

10.4 Operation Shutdown

Under certain hazardous situations, the on-site geologist/engineer, SSO, or SSR may request that site operations be temporarily suspended while the underlying hazard is corrected or controlled.

10.5 Spill or Hazardous Materials Release

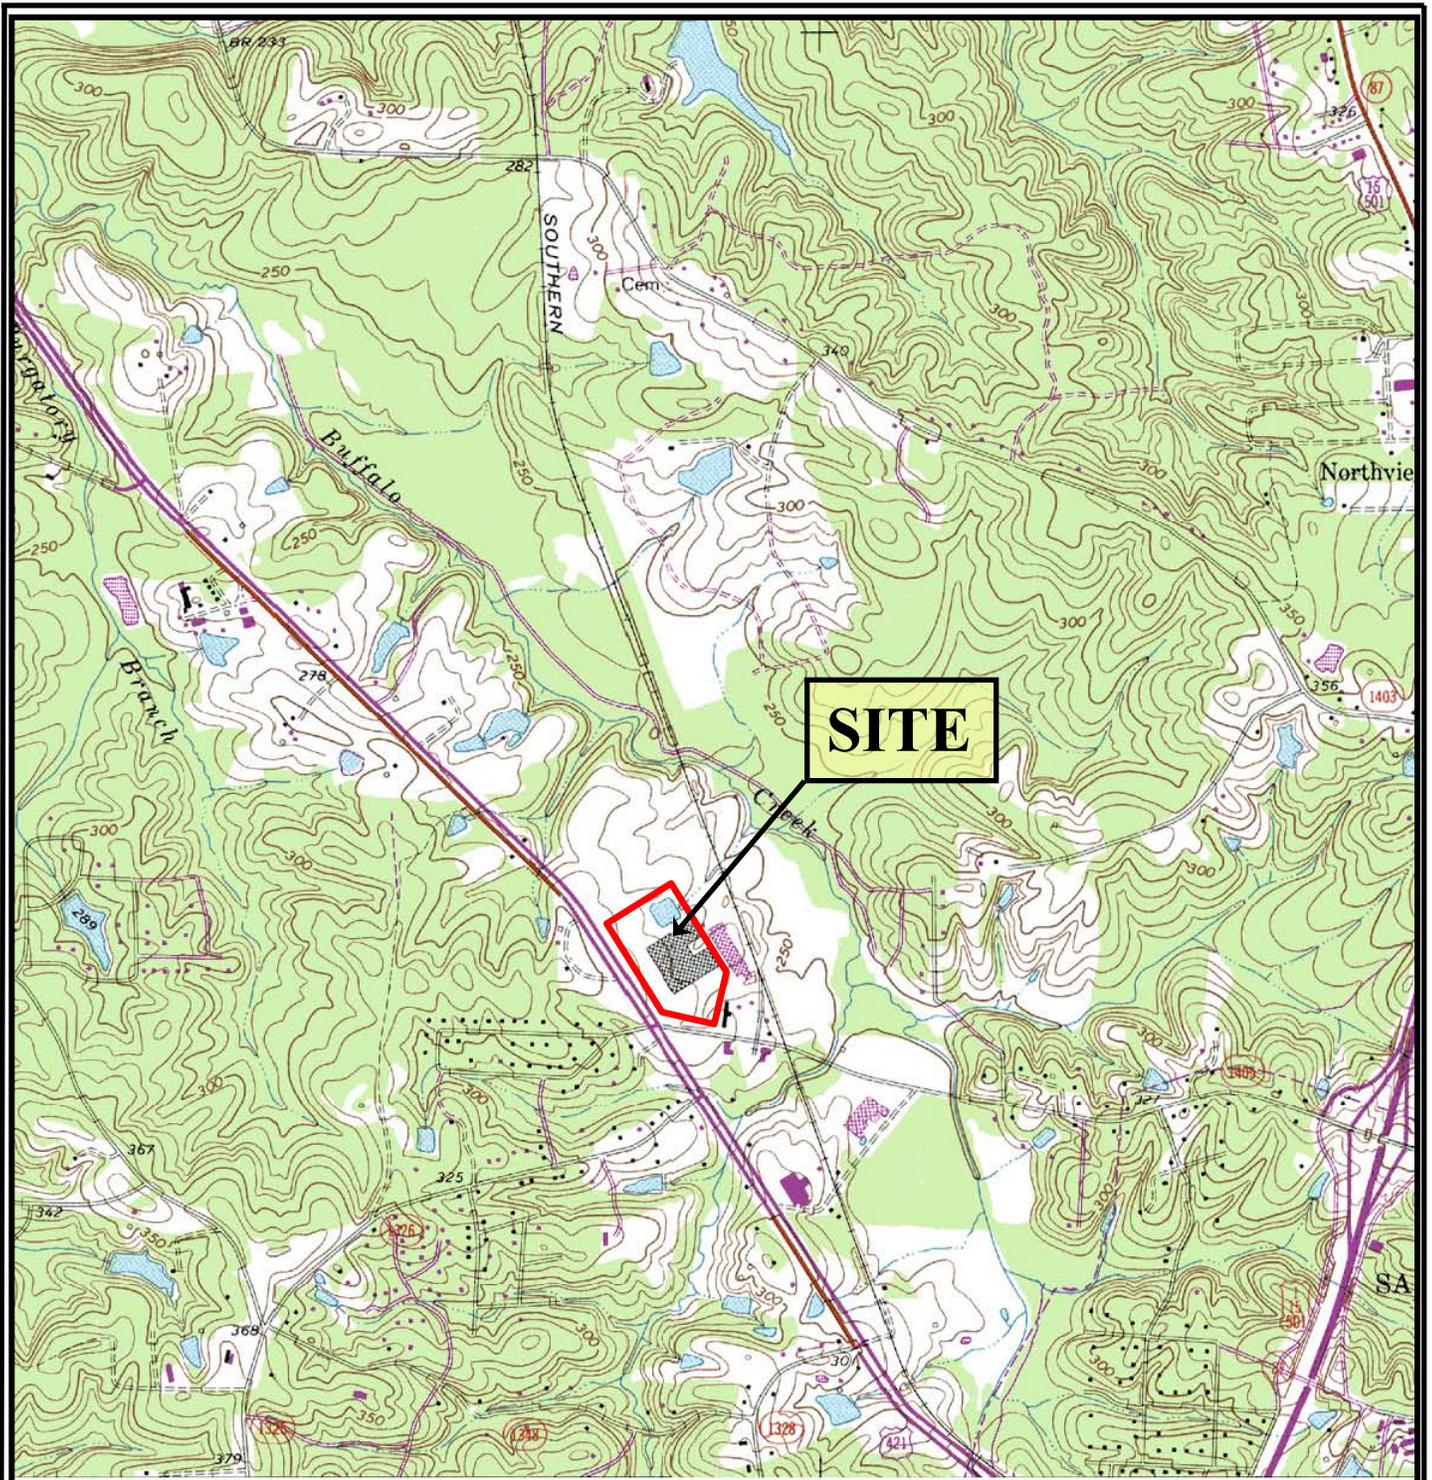

Small spills are immediately reported to the SSO and are dealt with according to chemical manufacturer's recommended procedures.

10.6 Emergency Medical Treatment Procedures

First aid should be administered while awaiting an ambulance or paramedics. Injuries and illnesses must be reported to the Project Manager. Personnel who are transported to a clinic or hospital for treatment should take with them information on the chemical(s) they have been exposed to at the site. This information is included in Section 4.2 of this Plan.

11.0 Training and Medical Surveillance

All H&H site personnel and subcontractor personnel will have met the requirements of 29 CFR 1910.120 (e), including 40 hours of initial training, eight hours of annual refresher training, and eight hours of supervisor training for personnel serving as Site Safety Officers. In addition, H&H requires their employees whose work includes potential exposure to hazardous substances to participate in its medical surveillance program.

Appendix B

Heat Stress and Cold Stress Guidance

Cold Stress/Heat Stress

COLD STRESS

If site work is to be conducted during the winter, cold stress is a concern to the health and safety of personnel. With regard to the wearing of Tyvek suits, because such disposable clothing does not "breathe well," perspiration does not evaporate and the suits can become wet. Wet clothes combined with cold temperatures can lead to hypothermia. If the air temperature is less than 40 degrees Fahrenheit (°F) and an employee perspires sufficiently to wet clothing, the employee should change to dry clothes. The following section describes the signs and symptoms of cold stress.

Signs and Symptoms of Cold Stress

Incipient frostbite is a mild form of cold stress characterized by sudden blanching or whitening of the skin.

Chilblain is an inflammation of the hands and feet caused by exposure to cold moisture. It is characterized by a recurrent localized itching, swelling, and painful inflammation of the fingers, toes, or ears. Such a sequence produces severe spasms, accompanied by pain.

Second-degree frostbite is manifested by skin with a white, waxy appearance and the skin is firm to the touch. Individuals with this condition are generally not aware of its seriousness, because the underlying nerves are frozen and unable to transmit signals to warn the body. Immediate first aid and medical treatment are required.

Third-degree frostbite will appear as blue, blotchy skin. The tissue is cold, pale, and solid. Immediate medical attention is required.

Hypothermia develops when body temperature falls below a critical level. In extreme cases, cardiac failure and death may occur. Immediate medical attention is warranted when the following symptoms are observed:

- Involuntary shivering
- Irrational behavior
- Slurred speech
- Sluggishness.

HEAT STRESS

Wearing PPE also puts a worker at a considerable risk of developing heat stress. Table 2 describes the signs and symptoms of heat stress. This can result in health effects ranging from heat fatigue to serious illness or death. Consequently, regular monitoring and other precautions are vital.

For workers wearing standard work clothes, recommendations for monitoring and work/rest schedules are those approved by ACGIH and NIOSH. Workers wearing semipermeable PPE or impermeable PPE should be monitored when the temperature in the work area is above 70 F. To monitor the worker, the following should be measured:

- Heart rate--The radial pulse should be counted during a 30-second period as early as possible in the rest period.
 - If the heart rate exceeds 110 beats per minute at the beginning of the rest period, the next work cycle should be shortened by one third and the rest period should be kept the same.
 - If the heart rate still exceeds 110 beats per minute at the next rest period, the following work cycle should be shortened by one third.
- Oral temperature--A clinical thermometer (3 minutes under the tongue) or similar device should be used to measure the oral temperature at the end of the work period (before drinking).
 - If the oral temperature exceeds 99.6°F (37.6 degrees Celsius (°C)), the next work cycle should be shortened by one third, without the rest period being changed.
 - If the oral temperature still exceeds 99.6 F (37.6 C) at the beginning of the next rest period, the following work cycle should be shortened by one third.

- A worker should not be permitted to wear a semipermeable or impermeable garment when his/her oral temperature exceeds 100.6 F (38.1 C).
- Body water loss, if possible--Weight should be measured on a scale accurate to +/- 0.25 pound at the beginning and end of each work day to see if enough fluids are being taken to prevent dehydration. Weights should be taken while the employee wears similar clothing. The body water loss should not exceed 1.5 percent of total body weight loss in a workday.

Proper training and preventive measures will help avert serious illness and loss of work productivity. Preventing heat stress is particularly important. To avoid heat stress, the following steps should be taken:

- Work schedules should be adjusted.
- Shelter (air-conditioned, if possible) or shaded areas should be provided to protect personnel during rest periods.
- Workers' body fluids should be maintained at normal levels to ensure that the cardiovascular system functions adequately. Daily fluid intake must approximately equal the amount of water lost in sweat, i.e., 8 fluid ounces (0.23 liter) of water must be ingested for approximately every 8 ounces (0.23 kilogram) of weight lost. The normal thirst mechanism is not sensitive enough to ensure that enough water will be drunk to replace lost sweat. When heavy sweating occurs, the worker should be encouraged to drink more. The following strategies may be useful:
 - Water temperature should be maintained at 50°F to 60°F (10° to 15.6°C).
 - Small disposable cups for water should be provided.
 - Encourage workers to drink 16 ounces (0.5 liter) of fluid (preferably water or diluted drinks) before beginning work. Urge workers to drink a cup or two every 15 to 20 minutes, or at each monitoring break. A total of 1 to 1.6 gallons (4 to 6 liters) of fluid per day are recommended, but more may be necessary to maintain body weight.

- Encourage the use of cooling devices to aid natural body heat exchange during prolonged work or severe heat exposure.

Signs and Symptoms of Heat Illness

Heat rash may result from continuous exposure to heat or humid air.

Heat cramps are caused by heavy sweating with inadequate electrolyte replacement. Signs and symptoms include:

- Muscle spasms
- Pain in the hands, feet, and abdomen.

Heat exhaustion occurs from increased stress on various body organs, including inadequate blood circulation due to cardiovascular insufficiency or dehydration. Signs and symptoms include:

- Pale, cool, and moist skin
- Heavy sweating
- Dizziness, fainting, and nausea.

Heat stroke is the most serious form of heat illness. Temperature regulation fails, and the body temperature rises to critical levels. Immediate action must be taken to cool the body before serious injury or death occurs. Competent medical help must be obtained. Signs and symptoms are:

- Red, hot, and unusually dry skin
- Lack of or reduced perspiration
- Dizziness and confusion
- Strong, rapid pulse, and coma.
