Geoff,

John Patrone's inspection on June 26, 2012 raised an issue about the use of tire pieces for engineered projects to improve the property. At least one county Solid Waste Director is nervous about that comment and no follow up in the inspection report.

You and I met in July to discuss the engineer's letters and we agreed such projects are acceptable use of tire pieces. You also asked I keep you informed of any new use of tires so you are not blindsided. At this time, I have no new projects but several are in planning. When the designs are complete and I have the engineer's letters for these new projects, I will let you know.

Would you please close that loop in my permit re-inspection details to abate the nervousness?

Thank you,

Michael Tucker
