Re: Request to Renew Permit to Operate
River City Transfer Station
Cumberland County, North Carolina
Permit No. 2611T-Transfer
Doc ID No. 18511

Dear Mr. Hester:

We have received documents from you dated January 11 and February 6, 2013, indicating your desire to renew the permit for the above referenced facility. In the above referenced letters, you indicate many changes in your operations that are not contained in your currently approved Operations Plan.

Due to the changes you desire in your operations, which include changing the facility name, increasing daily tonnage, changing receiving territory to all of North Carolina, changing the designated disposal facility and other components of your operations, you must submit an updated Operations Plan in application for the changes you request.

Attached is the approved application you submitted for your current permit that you may use as a guidance document for the new permit. Please make the changes you requested in a new and completed plan and submit the document for review.

Also, please note that the permit you marked-up in the February 6 submittal is not your current permit to operate. The current permit to operate is attached, which was mailed and emailed to you March 25, 2011.

Please contact me with your questions by email [Geof.Little@ncdenr.gov] or telephone [919-707-8252].

Sincerely,

Geoffrey H. Little
Environmental Engineer II
