Permitting Branch Supervisor - Solid Waste Section
NC Department of Environment and Natural Resources
1646 Mail Service Center
Raleigh, North Carolina 27699-1646

Re: Warren County Solid Waste Transfer Permit Renewal

Mr. Mussler:

The Warren County Public Works department is requesting the renewal of its Transfer Facility Operations Permit. The Facility will continue to be maintained and operated in accordance with the approved Operational Plan already on file in accordance with rule 15A NCAC 13B.402, "Operational Requirements for Transfer Facilities."

The service area will be the County of Warren along with the Towns of Norlina, Macon and Warrenton. The contact information and tonnage has been updated but everything else remains the same. The land deed for the property is recorded in Deed Book 256, Page 261, dated 1973 and is the most current deed on record.

Waste Industries, Inc., is the current contractor in charge of the transfer station daily operations. Brunswick Landfill located in Virginia and Upper Piedmont Regional Landfill located in North Carolina receives the final disposal of waste from the station.

An electronic copy of this renewal application has been submitted by e-mail to mussler@ncdenr.gov. If you have any questions or comments, please contact me at (252) 257-3795 or by e-mail at mbrothers@co.warren.nc.us.

Sincerely,

I. INTRODUCTION

Purpose

The purposes of this plan are: (1) to describe basic operations and provide general instructions to the operators of the Warren County Transfer Station and (2) to seek renewal of operations permits in accordance with NC Solid Waste Management Rules (State Rules) **Section .0400 - TRANSFER FACILITIES**. This plan will address **Section .0402 - OPERATIONAL REQUIREMENTS** of the State Rules.

Background Information

Warren County constructed a temporary Solid Waste Transfer Station in March of 1994 and began operation of the facility in April 1994 to allow for cessation of landfill operations on the same property. Closure of the landfill was dictated by the Resource and Conservation Recovery Act (RCRA) Subtitle D Regulations. The transfer station became an integral part of the Warren County overall solid waste management strategy with the closing of the landfill. The Municipal Solid Waste Landfill Unit was closed prior to April 9, 1994, and the County arranged to have its solid waste transferred. The transfer station is located adjacent to the county's closed solid waste management facility on SR 1600 south of Warrenton at 559 Baltimore Road, Warrenton, North Carolina.

Operational Arrangements

The facility is owned by Warren County and (through an agreement) is operated by Waste Industries, Inc. Warren County ceased land-filling of municipal solid waste and now transfers all solid waste to the Brunswick Landfill in Brunswick County, Virginia and Upper Piedmont Regional Landfill located in North Carolina. The County's contract with Waste Industries is for operations for three (3) years and can be extended for additional one-year periods.

Wastewater

One of the requirements to operate the permanent facility is that the waste water generated at the facility be properly disposed of. Further, wash-down water is necessary to keep the facility in a sanitary condition. Sources of wastewater are (1) tipping floor and area wash-down, (2) drippings and squeezings from the trash compaction equipment and haul trailers, and (3) rain water that falls on the open area. By design, the area tributary to the wastewater facilities is minimized.

Service Area and Destination of Waste

The transfer station will serve all of Warren County and will not receive waste originating outside of the County except as may be permitted. The waste is transferred to the Brunswick County municipal solid waste lined landfill in Brunswick County, Virginia or Upper Piedmont Regional Landfill located in North Carolina for final disposal.

Environmental Assessment

An Environmental Assessment was submitted to the DSWM on October 21, 1994. It was recommended that a Finding of No Significant Impact (FONSI) be determined.

II. COMPLIANCE WITH RULES

Operations Plan and Procedures for Loading and Unloading Trailers

The Transfer Station consists of a standby tipping floor and an adjacent tipping area where collection trucks discharge the waste into a chute to a compactor. Town, County, waste haulers, collection vehicles and private vehicles discharge solid waste into the chute. In the event of failure or maintenance of the compactor, the waste is placed on the standby tipping floor. The transfer trailer is located adjacent and below the tipping floor and loaded by a backhoe or other available equipment directly into the trailer. The total tractor-trailer weight is recorded at the existing full length scales before leaving the facility. The Operator utilizes hydraulic pump blade trailers to haul the average of 40 tons of waste per day it currently receives.

The Transfer Station continues to operate in accordance with the approved Operations Plan and all Conditions of Permit specified in the NCDENR Solid Waste Section Transfer Facility Permit. No specific groundwater monitoring is required under section .0400 – Transfer Facilities of the NC Solid Waste Management Rules. Records are kept of weights discharged at the Transfer Station.

Incoming waste is not stored on tipping floors. If needed, an open top container or haul trailer can be dropped behind the shop in a designated area and removed within 24 hours. Under no circumstances is waste stored or left on tipping floors overnight.

During operation, dumped waste is deposited into the chute to the compactor which is hydraulically forced into a waiting haul truck. The facility is swept and washed down at the end of the operation each day. Grates and traps at drains are cleaned of solids before being washed down and the waste collected is disposed of properly. The wastewater pretreatment works onsite is inspected on a regular basis. The following items are checked and cleaned as needed:

- Inspect Grit Collector: remove accumulated grit and dispose of properly in container for combining with waste to be hauled to the landfill.
- Inspect Oil/Water Separator: remove accumulated oil when level is deep enough to enable removal and dispose of properly.
- Inspect Pump Station operation.

Receivable Waste

The Transfer Station receives (municipal solid waste and commercial waste) an average 35 - 40 tons a day. The station does not accept hazardous or liquid waste, asbestos, or other waste not accepted at the final disposal facility unless a separate waste determination is made and applied for. The Transfer Station receives only the waste it is permitted to receive. For "special wastes" considered for acceptance and not specifically identified in the approved Operations Plan, permission for acceptance will be sought from NCDENR Solid Waste Section. An amendment to the Permit or a waste determination will be sought should conditions warrant.

We do not accept barrels and drums unless they are empty and sufficiently perforated to ensure that no liquid or hazardous waste is contained therein. All loads are screened visually and at least one percent (1%) are screened and documented for unapproved waste.

Traffic Flow and Security

Posted signage directs the traffic to the scale house when they enter the facility. From there, they are directed to the tipping floor and then back to the scales. The site is fenced in and the gate is locked at the end of each work day. Signage is located at the entrance and includes the hours, days of operation, permit number, business telephone and emergency telephone numbers and unapproved materials.

Wastewater Disposal

Runoff and wash water from the tipping floor and loading area is collected and piped to on-site pretreatment works, consisting of a grit collector, oil/water separator and a pump station. Wastewater is pumped to the Town of Warrenton's municipal wastewater treatment plant. The runoff generated from daily washing of the station and from rainwater does not exceed an average of 1200 gallons per day. Site runoff is diverted away from the tipping area. If a long term power outage is experienced, a certified waste hauler will be contracted to pump and haul liquids from the station to prevent overflow.

Oil accumulation from the oil/water separator is minimal from a small operation like this, but if any significant accumulation occurs, we would contract with a used oil recycler (such as Noble Oil).

Fire Control

Fire fighting services are provided by the Warrenton Rural Fire Department. The Transfer Station is also equipped with a fire extinguisher for control of small fires.

In case of a fire, the Warrenton Rural Fire Department is to be immediately contacted. All personnel at the facility are familiar with the use of the fire extinguisher. All fire extinguishers are inspected and serviced monthly in accordance with manufacturer's instructions. All fires are reported to the Solid Waste Section within 24 hours by telephone and written notification is provided within 15 days. Telephone numbers are included under contacts.

Vector Control

The station is swept and washed down and free of solid waste at the end of each day. Disinfectant is available if needed to perform this task. Full or partially filled haul trailers are left at the Transfer Station overnight but are covered and closed.

The tipping floor is thoroughly swept and washed-down at the end of operation each day or as warranted. Any wastes that has an increased potential for attracting flies, rodents and other insect or vermin is disposed of in the transfer trailer as soon as possible. Solid waste is not stored on the tipping floor over-night.

Equipment

The transfer station utilizes the following equipment for the regular operation and maintenance:

- Compactor/chute to load transfer trailers
- Rubber-tired front end loader of tipped wastes from standby tipping floor
- Transfer trailers
- Scales for weighing incoming and transferred waste

Control of Windblown Waste

The tipping floor and loading areas are provided with a fence to mitigate windblown debris. Under normal operation, collection vehicles tip their waste directly onto the compactor chute thereby mitigating the potential for windblown waste. All tipped waste is contained in the immediate area and cleaned up at the end of each working day.

All tipped waste will be directed to the chute feeding the compactor except upon failure or maintenance of the compaction equipment in which case, solid waste will be tipped on the standby tipping floor. In this case, a frontend loader will then be utilized to pickup and deposit waste in an open top haul trailer. The open top haul trailer will be provided with a cover. All waste that escapes the area shall be collected as soon as possible daily and disposed of properly.

Personnel Requirements, Qualifications and Responsibilities

Responsibility of the Company:

The Company shall assign qualified personnel to manage and operate the collection and transportation system. The Company agrees that all employees will be required to wear clean uniforms that display the name of the Company and identify the individual as an employee of the Company. Each employee will carry a valid operator's license for the type of vehicle such employee is required to operate. The Company shall provide operation and safety training for all operational personnel.

Responsibility of the County:

The County shall be responsible for the landscaping, fencing, construction and repairs to the collection sites and the Transfer Station. The County will ensure that such facilities are now, and will remain in full compliance with all applicable laws, including without limitation, maintenance of all required permits. The County's Solid Waste staff consists of five county employees and one Waste Industries employee.

Warren County Employees:

Director
Administrative Assistant II
Solid Waste Supervisor
Weighmaster
Solid Waste Operator

Waste Industries Employee:

Transfer Station Operator

A copy of Licenses and Certificates are attached.

FINANCIAL ASSURANCE

The financial assurance amount should be equal to the cost to hire a third party to remove and clean up a week's worth of waste from the facility, haul, and dispose of the waste, in the event of site abandonment. The station produces approximately thirty-five (35) tons per day with a disposal rate of Sixty-Two Dollars and Sixty-Seven Cents (\$62.67) per ton. For a week's worth of operations, the cost analyses would break down as follows:

35 tons per day x 5 days	=	175 tons weekly
175 tons x \$62.67 per ton hauling	=	\$10,967.25
5 days at \$3,500.00 per day for clean-up	=	\$17,500.00

It would take less than Thirty-five Thousand Dollars (\$35,000.00) to remove, clean-up and dispose of a weeks worth of waste. Also, as of July 1, 2011, Solid Waste had a Fund Balance of \$325,617.00 which is more then enough to cover a week's worth of clean-up.

Compliance Officer
Solid Waste Section
DENR - Division of Waste Management
1646 Mail Service Center
Raleigh, NC 27699-1646

Dear Compliance Officer,

I am the chief financial officer of Warren County, 548 West Ridgeway St. Warrenton, NC 27589. This letter is in support of this unit of local government's use of the financial test to demonstrate financial assurance, as specified in N.C.G.S 130A-295.04.

This unit of local government is the owner or operator of the following facilities for which financial assurance for closure, post-closure, or corrective action is demonstrated through the financial test specified in N.C.G.S 130A-295.04. The current closure, post-closure, or corrective action cost estimates covered by the test are shown for each facility:

Facility Name: Warren County Transfer Station
Facility Address: 559 Baltimore Road, Warrenton, NC 27589
Permit Number: 93-02T
Closure Cost Estimate: N/A
Post-Closure Cost Estimate: N/A
Corrective Action Cost Estimate: N/A

[Provide the above, indented information for each facility]

Total Costs to be Assured: N/A

The fiscal year of this unit of local government ends on June 30th. The figures for the following items marked with an asterisk are derived from this unit of local government's Annual Financial Information Report (AFIR) for the latest completed fiscal year, ended June 30, 2011

RATIO INDICATORS OF FINANCIAL STRENGTH

1.	Sum of current closure, post-closure and corrective action cost estimates [<i>total of all cost estimates shown in the paragraphs above</i>]	\$ 30,000
*2.	Sum of cash and investments (AFIR Part 7)	\$ 3,205,193
*3.	Total expenditures (AFIR Part 4 Columns a & b and Part 5 for municipalities or Part 5 excluding educational capital outlays for counties)	\$27,754,639
*4	Annual debt service (AFIR Part 4 Section I)	\$.....
5.	Assured environmental costs to demonstrate financial responsibility in the following amounts under Division rules:	
	Solid waste management facilities under 15A NCAC 13B	\$.....
	Hazardous waste treatment, storage and disposal facilities under 15A NCAC 13A .0009 and .0010	\$.....
	Petroleum underground storage tanks under 15A NCAC 2N .0100 - .0800	\$.....
	Underground Injection Control System facilities under 15A NCAC 2D .0400 and 15A NCAC 2C .0200	\$.....
	PCB commercial storage facilities under 15A NCAC 2O .0100 and 15A NCAC 2N .0100	\$.....
	Total assured environmental costs	\$.....
*6.	Total Annual Revenue (AFIR Part 2)	\$.....
	Circle either "yes" or "no" to the following questions.	
7.	Is line 5 divided by line 6 less than or equal to 0.43?	yes/no
8.	Is line 2 divided by line 3 greater than or equal to 0.05?	yes/no
9.	Is line 4 divided by line 3 less than or equal to 0.20?	yes/no

BOND RATING INDICATOR OF FINANCIAL STRENGTH

1.	Sum of current closure, post-closure and corrective action cost estimates [<i>total of all cost estimates shown in the paragraphs above</i>]	\$.....
2.	Current bond rating of most recent issuance and name of rating service
3.	Date of issuance bond
4.	Date of maturity of bond
5.	Assured environmental costs to demonstrate financial responsibility in the following amounts under Division rules:	

Solid waste management facilities under 15A NCAC 13B	\$.....
Hazardous waste treatment, storage and disposal facilities under 15A NCAC 13A .0009 and .0010	\$.....
Petroleum underground storage tanks under 15A NCAC 2N .0100 -.0800	\$.....
Underground Injection Control System facilities under 15A NCAC 2D .0400 and 15A NCAC 2C .0200	\$.....
