Subject: McGill perm t modification

Hello Steve – I have a couple of questions about the permit modification. Please add the response to the text of the permit modification proposal that was sent in earlier.

1. In the description of the building replacement, please add that the upper portion of the building and the roof would be replaced. The lower part of the building that is concrete will stay as is, including the curing bays.
2. Please add how the compost operation will be managed during construction of the back building. Will the curing compost have minimal outside exposure? Will there be any steps taken to ensure there won't be a release of odors outside the building?
3. Please clarify that the fans are to be installed in the open area bays, not the processing bays. Also clarify if the fans are to provide aeration through the floor of the open area (or how will it provide aeration).

Also, this is not part of the permit modification application, but we would like an update on the fecal coliform testing since January of last year, and an update to the phasing out of the liquids stored in the waste tank. If you could just respond to these two issues by email that would be great.

If you have any questions please let me know.
Thanks, Donna
