Subject: Testing

Donna,

In regards to fecal coliform testing since January 2013, 10 samples have been analyzed for pathogens and trace metals as per 503 regulations. All samples have passed fecal coliform, salmonella and trace metals as per 503 regulations. The phase out continues of the liquids stored in the liquid waste tank. No liquids have been added to the tank and the existing liquids will continue to be introduced into the plant slowly to avoid odor problems.

Please let me know if you need any additional information.

Thanks,

Steve
