Subject: Wilkes Rd. Yard Waste Facility application

Hello Michael and Robert – I've reviewed the resubmittal for the Wilkes Rd. Yard Waste Facility, and I have a few comments:

1. It appears that when the revisions were made in this submittal, the changes were made to the first version of the application (May 2011) instead of the most recent version (March 2012). For example, in Section 2.4.2, the original application did not describe property line setbacks, and this was added in the March 2012 submittal. In the current submittal, this section does not describe property line setbacks. Please review application for corrections.
2. Please provide an update regarding the DWR (formerly DWQ) permit application.
3. For the soil evaluation, we can accept the 2 foot test pit investigation if it is accompanied by the USDA Soil Survey map, with the soil type identified for the site (detailed soil map unit), and the soil type description, including depth to groundwater. The soil type and depth the groundwater description should meet the compost rule requirements. The application should contain a copy of the map with the location identified, soil type description, and a discussion added to the text of the application.

Please provide an amended application with responses incorporated into the text. Only an electronic copy (pdf) is requested for this submittal.

If you have any questions please let me know.

Thanks, Donna
