***Subject: Proposed Revisions to Domtar Operations Plan Phases 2, 3, and 4 last revised October 2012***

Dear Larry:

We would appreciate your reviewing and request your approval of the following proposed revisions to our operating plan:

- On page 1 of the operating plan it states that cover waste includes: sludge, boiler ash, woodyard waste. We would like to add K-Lime as a cover waste. K-Lime is a mixture of ash, grits, dregs, and sludge. The majority of the blend is ash.
- On page 4 of the operating plan it states that that “no segregating or mixing will take place within 10 feet of the liner.” We propose to change 10 feet to a minimum of 4 feet.
- On page 3 it states “Edge-of-waste” markers are installed to delineate the edge of the waste. We propose to change this to “Edge-of-liner” markers.
- On page 10 it states “LCRS pipes will be cleaned out by the use of a clean out snake or high-pressure water flushing every other year...” We propose to remove the words “every other year” to be consistent with NCGS 130A-295.6(h)(3).

If you have any questions or require any additional information pertaining to this report, please contact me by phone, (252) 793-8163 or by email, [kari.cahoon@domtar.com](mailto:kari.cahoon@domtar.com).

Sincerely,

Kari Cahoon  
Environmental Engineer
